

Polyols

Product Range

HARKE

Coatings &
Polymers

Coatings, Plastics &
Polymers

YOUR BENEFITS

- ▶ Useable for several applications
- ▶ Different molecular weights
- ▶ Steady quality
- ▶ Diols, triols etc.

**YOUR PARTNER
FOR COATINGS, PLASTICS & POLYMERS**

Applications:	▪ rigid polyurethane foams ▪ crosslinker agent ▪ semirigid polyurethane foams					

POLYCARBONATE POLYOLS

Available Types

Type	Name	OH number [mg KOH/g]	Average Molecular Weight [g/mol]	Viscosity at 50 °C [cps]	Melting Range [°C]	Appearance	Functionality
102	Ravecarb Homopolymer from Hexanediol	106 - 118	1000	1000	33 - 43	white, solid	2
103	Ravecarb Copolymer from Hexanediol and Pentanediol	106 - 118	1000	1000	-	liquid	2
106	Ravecarb Homopolymer from Hexanediol	53 - 59	2000	10000	36 - 50	white, solid	2
107	Ravecarb Copolymer from Hexanediol and Pentanediol	58 - 64	2000	8000	-	liquid	2
111	Ravecarb Copolymer from Polycaprolactonediol and Hexanediol	56	2000	3500	-	liquid	2
Application:	Aliphatic polycarbonate polyols have a very good weathering resistance, excellent hydrolytic stability and low viscosity. Formally polycarbonate esterification are out of carbonic acid and at least difunctional alcohols. Our polycarbonate polyols are suitable for direct use in high-quality coatings. They also can be used to the further development of polyurethane binders. Especially noteworthy were polyurethane dispersions.						

POLYURETHANE ADDITIVES

Finishing Lacquers

These are the products to finish the moulded soles, our range includes dipping and spray types. These are used with specific machines and the soles are dipped directly into the bath containing the lacquer. The consumption of lacquer is only about 15 - 25 gr/pair.

- Transparent finish
- Brush-Off finish (age effects)
- Special effects such as cork imitation, metallic, velvet imitation or rubber-like touch

Flame Retardants

These additives can influence the flammability, the propagation of the flame and/or the fire load. For each application the most suitable flame retardant solution should be used to assure a high fire retardant effect of the material.

- Halogenated/halogen-free
- Reduces flammability
- Solid/liquid
- Prevent negative effects (toxic gases, smoke or odors)

Pigment Paste

They have been developed for colouring both Polyether and Polyester Polyurethane compounds, used in the production of shoe soles, integral skin, rigid and slab-stock foams, RIM and elastomers. They are a concentrated pigment dispersion in plasticizer or in polyol.

- Viscosity range from 500 - 10.000 cps
- OH number from 0 - 32
- Usage level between 0.5 - 5 %
- Concentrated pigment paste with plasticizer or polyol as carrier

Release-Agents

Water or solvent based (high or low concentration) Release-Agents for the production of shoe soles, flexible hot & cold foam, RIM, RRIM and SRIM as well for elastomers. Additionally we are providing our customers cleaners for their moulds and mixing heads.

- Solvent or water based
- Available for all PU applications
- Ready to use products manually or by air gun

PTMG

PTMG – Poly(tetramethylene ether) Glycol is manufactured by tetrahydrofuran (THF). It is a linear polyether glycol with primary hydroxyl groups at both ends. It easily reacts with isocyanates compounds (e.g. MDI, TDI), and generates polymers with the superior characteristic described below.

- High impact resilience
- Flexibility at low temperature
- Tear resistance
- Hydrolysis resistance
- Abrasion resistance
- Fungus resistance

PTMG has superior characteristics for use in the soft segment of polyurethane and polyester resins. The polymer obtained is used in a wide range of applications, from clothing and other ordinary consumables to various industrial materials (e.g. mechanical parts). Its applications are expected to increase in the future.

Feature of PTMG process:

1. Stable and high product quality (uncolored and low impurity), which is highly valued from leading manufacturer of spandex fibers
2. Using original catalysts
3. Cost competitive process
4. Green process/low waste and low environmental load

Grade	Molecular Weight	Hydroxyl Value (mg KOH/g)	Acid Value (mg KOH/g)	Moisture (%)	Volatile Content (%)	Color (Hazen)	Viscosity (mPA*s)
PTMG 250	210 ± 25	477.5 ~ 606.5	max. 0.10	max. 0.05	max. 0.1	max. 50	50 (20 °C)

BIOPTMG

BioPTMG is a new environmentally friendly product that is manufactured from plant-derived raw materials and contributes to help prevent global warming. The quality of BioPTMG is comparable to our conventional PTMG and offers a high bio-based carbon content. This drop-in solution can contribute to diversify our customer's bio-based product portfolio.

Reduces CO₂ Emission Compared to Conventional Products

Plant Derived High Bio-Based Carbon Content

Grade	Molecular Weight	Hydroxyl Value (mg KOH/g)	Acid Value (mg KOH/g)	Moisture (%)	Volatile Content (%)	Color (Hazen)
BioPTMG 650	650 ± 50	160 ~ 187	less than 0.05	less than 0.03	less than 0.1	less than 50
BioPTMG 1000	1,000 ± 50	107 ~ 118	less than 0.05	less than 0.03	less than 0.1	less than 50
BioPTMG 2000	2,000 ± 100	53 ~ 59	less than 0.05	less than 0.03	less than 0.1	less than 50
BioPTMG 3000	3,000 ± 200	35 ~ 40	less than 0.05	less than 0.03	less than 0.1	less than 50
Packing:	Drum: 180kg (BioPTMG 650), 200kg (BioPTMG 1000/2000/3000)					

WHY HARKE

Countless Opportunities for a Successful and Future-Oriented Collaboration

one group of **16** companies | **17** offices worldwide | **7** divisions
25 business units | **15** diverse service functions | **4** laboratories | **2** production sites
230 employees | working with **35** industries | in more than **63** countries | on **4** continents
with over **3,000** customers | and more than **40,000** deliveries per year

10 Reasons to Collaborate with HARKE

relevant portfolio | long-standing business relations | growing company group
excellent technical know-how | responsible partner | fast action | sustainable enterprise
digitization | stable management | passionate people
