**DID YOU KNOW?**

BSPP PORTS AND BSPP HOSE FITTINGS SEAL DIFFERENTLY. PORTS TYPICALLY USE A BONDED WASHER OR O-RING AT THE BASE, WHILE HOSE FITTINGS OFTEN SEAL WITH A CONE OR SEAT. EVEN THOUGH THE THREADS ARE THE SAME, THE SEALING METHOD MUST MATCH TO ENSURE A PROPER, LEAK-FREE CONNECTION.

## DID YOU KNOW?

METRIC PORT FITTINGS SEAL AT THE BASE—NOT ON THE THREADS—and are available in several styles, including O-RING ONLY (ORB-STYLE), O-RING WASHER, and ELASTOMERIC SEALS. MATCHING THE CORRECT SEALING METHOD IS CRITICAL TO ENSURE A PROPER, LEAK-FREE CONNECTION, ESPECIALLY ON EUROPEAN AND IMPORTED EQUIPMENT.

THREAD INFORMATION

## JIC (37° Flare) Fittings

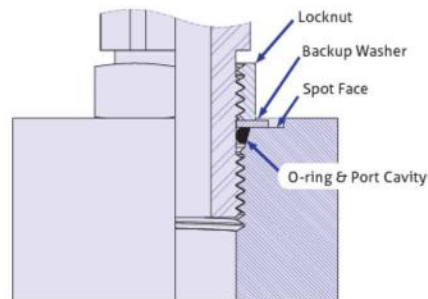

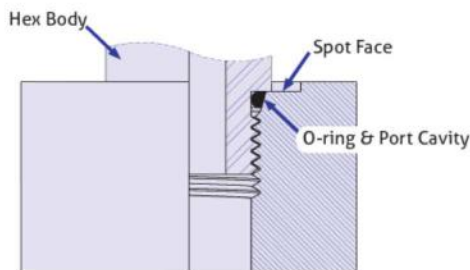

JIC fittings use a 37° flare seating surface to create a dependable metal-to-metal seal. With straight threads and no need for sealant, they offer a durable, reusable connection ideal for high-pressure hydraulic and fluid transfer applications.

## ORB (O-Ring Boss) Fittings

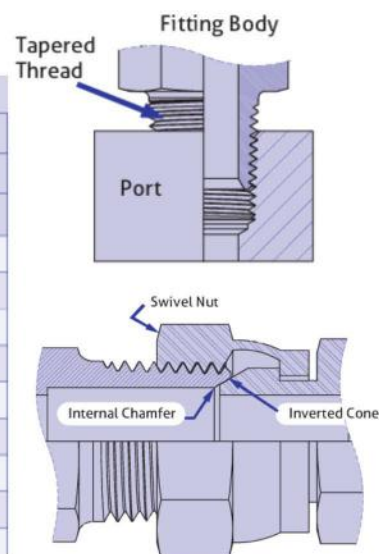

ORB fittings use straight threads with an O-ring at the base to create a secure, leak-free seal. Designed for reliable performance without thread sealant, they are ideal for hydraulic systems and other high-pressure fluid applications. Elbows and tees feature adjustable lock nuts, allowing for proper orientation during installation without compromising the seal.

## NPT (National Pipe Thread) Fittings

NPT fittings use tapered threads that seal through thread interference, creating a tight connection as they are tightened. Thread sealant or PTFE tape is required to ensure a leak-free seal. Commonly used in low to medium pressure applications,

NPT fittings are widely found in hydraulic, plumbing, and general fluid transfer systems.

## ORFS (O-Ring Face Seal) Fittings

ORFS fittings use a flat face sealing surface with an O-ring to create a reliable, leak-free connection. The seal is formed by compressing the O-ring between two flat faces, making them ideal for high-pressure and vibration-heavy applications. ORFS fittings are commonly used in hydraulic systems where leak prevention is critical.

## SAE Code 61 / Code 62 Flange Fittings

SAE Code 61 and Code 62 flange fittings provide a secure, high-strength connection for hydraulic systems using a flat face seal with an O-ring. The connection is clamped together with a split flange and bolts, ensuring even load distribution and a reliable seal.

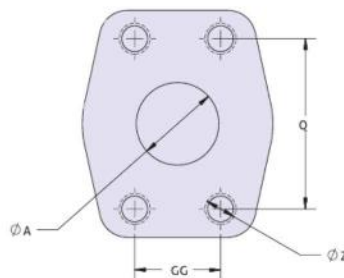

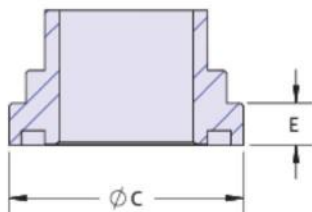

Code 61 flanges are typically used in standard-pressure applications, while Code 62 flanges are designed for higher-pressure systems. These fittings are commonly found in heavy equipment and industrial applications where durability and leak resistance are critical.

## BSPP (British Standard Pipe Parallel) Fittings

BSPP fittings use straight (parallel) threads and seal using a bonded washer, O-ring, or metal-to-metal seat rather than the threads themselves. Because of this, they do not require thread sealant when used with the proper sealing method.

Elbows and tees are available with jam nuts, allowing for easy orientation during installation while maintaining a proper seal.

Commonly used in European and international equipment, BSPP fittings are found in hydraulic and fluid transfer systems where a reliable, reusable connection is required.

## Metric Port Fittings

Metric port fittings use straight metric threads and seal with an O-ring or sealing washer at the base of the port. The seal is created independently of the threads, providing a reliable, leak-free connection without the need for thread sealant.

Commonly found in European and imported equipment, metric port fittings are used in hydraulic systems where consistent sealing and easy serviceability are required.

## Additional Thread Types Available

In addition to the thread types shown in this catalog, we offer a wide range of other domestic and international fittings to support specialized applications and equipment. These include DIN compression (L & S series), metric port fittings, JIS BSPP, JIS metric, Kobelco-style fittings, and metric and BSPP banjo fittings.

If you're working on imported equipment or unique systems, we can help identify and supply the correct components. Our inventory extends beyond what is listed here, and we're equipped to source and support a broad range of thread types and configurations to meet your needs.
