Comfort Line

Redefining industry standards

The Comfort Line redefines industry expectations by including an exceptional 5-year warranty as standard, setting a new benchmark for customer confidence and long-term value. Where many hot tubs offer limited cover or paid upgrades, Oasis Spas delivers comprehensive protection from day one — because true comfort means knowing your investment is secure for years to come.

This extended warranty reflects the quality of engineering, materials and construction throughout the Comfort Line™ range. From structural integrity and insulation systems to plumbing and components, every element is built to last and backed by Oasis Spas' commitment to reliability and customer support. It's not just peace of mind — it's proof that the Comfort Line™ is designed for long-term performance, not short-term appeal.

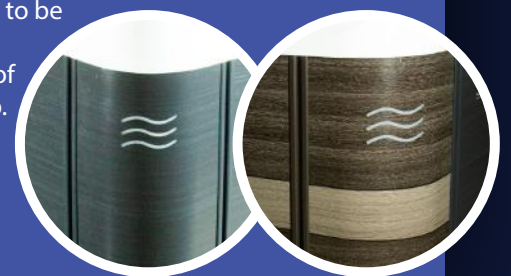

360 Seal Insulation

The new Comfort line hot tub range features 360° of insulation to ensure these hot tubs remain as eco-friendly and energy efficient as possible. With top quarter full foam edge foam, 50mm open cell foam inner insulation on sides and corners, foil and foam thermal wrap on aluminium sealed cabinet panels — helping to maintain temperature and reduce energy usage. This is the insulation technology all hot tubs should have. To further enhance the thermal properties of this range, a layer of floor insulation has also been added to further prevent any heat loss through the floor and into the ground.

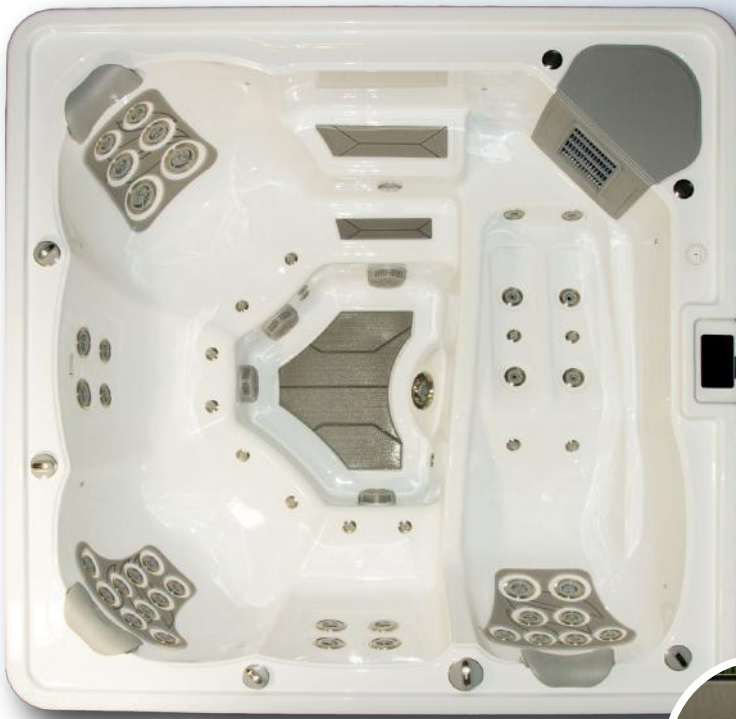

Interchangeable Panels

A unique and modern feature of the comfort line is the interchangeable side and corner panels. Change the look of your spa or replace panels easily if damaged it ever becomes damaged. Currently available in 2 different colours, with plans for further colour combinations coming soon. These panels also provide extra protection during delivery as the panels do not need to be added until installation of your hot tub.

Including: Worlds FIRST Full skirt Cover with Winter Sides

Total Protection. All-Season Efficiency. Effortless Use.

The Comfort Line introduces the world's first full-skirt hot tub cover with winter sides, designed to wrap around the entire spa — not just the top.

Made from durable WeatherShield™ material, this innovative cover provides:

Full 360° protection from rain, frost, wind and debris

An additional thermal barrier around cabinet panels

Reduced heat loss during colder months

Protection from scuffs, knocks and everyday wear

Unlike standard covers that only insulate from above, the Comfort Line cover seals in warmth from every angle, helping to maintain water temperature more efficiently and reduce running costs all year round.

Complete Spa Package - Included as Standard

Luxury should be effortless. That's why every Comfort Line hot tub comes as a complete ready-to-use package, including:

Full Skirt Cover with Winter Sides

Our unique design is made of weather shield material which gives year round protection with an added layer of extra insulation.

Cover Lifter

Smooth, easy lifting and closing of the insulated cover with minimal effort.

Hot Tub Steps

Safe, stable and stylish access into your spa

No hidden extras. No upgrades required. Just step in, switch on, and relax.

Luxury EVA Backrest Comfort

Comfort Line seating is finished with luxury EVA foam backrest liners, a high-quality material chosen for its soft-touch feel, durability and water

resistance. The gently cushioned surface supports the body while creating a subtle space between the skin and the jets, allowing water pressure to build before release for a smoother, more enveloping massage. The result is a seating experience that feels both indulgently comfortable and perfectly supportive — inviting you to relax for longer, sink deeper, and enjoy every moment in complete comfort.

WIRELESS CHARGING PAD

All of our Comfort Line feature a wireless charging pad which is built in to the acrylic, making it invisible and in keeping with the elegance and luxury of this range. This means you never have to worry about your phone losing charge while in the hot tub!

HYDROSOUND TECHNOLOGY

Hydrosound bluetooth audio with hidden transducer speakers and subwoofer create a full immersive sound experience

Oasis True Blue Filtration System

Every Comfort Line hot tub is equipped with three Oasis True Blue high-performance filters, working together with an integrated ozone mixing tube to deliver exceptional water clarity and hygiene. By increasing total filtration surface area and enhancing water sanitisation, the system captures more debris, fine particles and impurities, helping to keep water cleaner for longer while reducing strain on pumps and chemicals. The result is clearer water, improved circulation, and a more enjoyable, low-maintenance spa experience — so you can focus on relaxing, not constant water care.

Innovation: Meet the Dedicated Wearable Hot Tub Control

Total Control. Without Leaving Your Seat.

The Comfort Line introduces the world's first wearable hot tub control — a dedicated smart watch designed specifically for spa use.

- No reaching for control panels.
- No getting out of the water.
- No interrupting your relaxation.

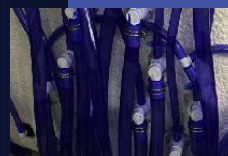

With the smart watch, you can instantly adjust your hot tub settings directly from your wrist, including:

- Jet power
- Air Blower
- lighting

Whether you're reclining in a lounge or enjoying conversation with friends, you stay in complete control without ever leaving your seat.

Thin jets further enhance the feeling of this luxurious spa as you no longer notice anything bulky affecting your relaxing massage at the end of a long day.

All Comfort Line hot tubs use NSF-certified food-grade piping, ensuring water flows through materials approved for the highest hygiene standards.

Control all of the important features of your spa using your own smart device. A dedicated app lets you connect via your phone to your hot tub and control the jets, the lights and the temperature of your spa.
