What is PrivacyPod

Modern work moves fast — but most workspaces haven't kept up. As offices opened up, noise levels rose, focus disappeared, and meeting rooms became impossible to book. Teams needed quiet places for heads-down tasks, private conversations, hybrid calls, and collaborative moments... but the only options were expensive construction, months-long lead times, or booths that looked good online but underperformed in real life.
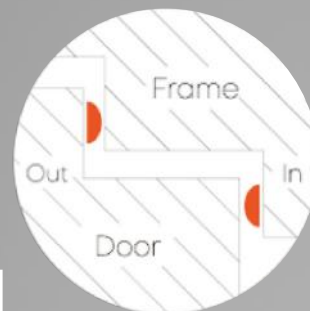

PrivacyPod was created to solve that problem — quickly, beautifully, and reliably.

From the beginning, we focused on the fundamentals that actually matter: sound privacy, clean airflow, durable materials, intuitive lighting, and a design that supports every working style. Our goal wasn't to reinvent workplace furniture; it was to build a tool that helps teams think, create, and collaborate without fighting the environment around them.

Every component in a PrivacyPod exists for one reason: to solve a real workspace problem we've dealt with ourselves. Multi-layer wall construction reduces sound transfer in either direction. Double-layer laminated glass keeps the interior bright while adding meaningful mass for isolation. Brushless ventilation fans refresh the air every 50–60 seconds so long meetings never feel stuffy. Motion-sensing LED lighting creates a calm, studio-clean atmosphere. And our reconfigurable structure assembles in hours, reconfigures easily, and moves with you to your next space.

What began as a single prototype has evolved into a complete family of focus, meeting, and accessible pods trusted by organizations across corporate offices, schools, healthcare settings, libraries, and local governments. While every model is different, the philosophy behind them is the same: giving people a space where their best work can finally happen.

As you plan for hybrid work, better collaboration, or simply a more human office, we're proud to be part of your solution — delivering high-end acoustic performance, rapid quick-ship timelines, and the kind of reliability that earns its place on your floorplate from day one.

01

Sealed for True Speech Privacy

A dual-gasket system along the door frame and glass edge forms a continuous acoustic seal, reducing air gaps and limiting sound leakage during calls or meetings.

02

Isolated From Floor Vibrations

Hidden caster feet sit on vibration damping pads that break the structure-borne path, minimizing low-frequency transfer into the floor and keeping the pod stable and quiet.

(877) 774–8763
info@privacypod.ai

03

Multi-Layer Acoustic Wall System

Each wall panel combines a rigid shell, high-mass core, acoustic foam, and PET felt to block outside noise and absorb internal echo for natural, low-fatigue speech.

04

Double-Layered Glass

5 mm + 5 mm laminated safety glass adds acoustic mass for better sound isolation while maintaining clear sightlines and a bright, open, studio-friendly interior.

PRIVACYPOD

Acoustic & Privacy Factors in **Open–Plan Offices**

Open–plan offices promised collaboration — but in practice, they often introduce a level of noise and interruption that teams simply can't work around. Conversations overlap, impromptu stand–ups spill into shared desks, and video calls compete with background chatter. Even highly skilled employees lose valuable momentum as their concentration gets pulled in and out of tasks throughout the day.

What makes this challenge harder is that modern work is more cognitively demanding than ever. Deep work needs quiet. Hybrid calls need acoustic consistency. One–on–one conversations need privacy. But most offices rely on open space, shared rooms, or makeshift partitions that were never designed to protect focus or confidentiality.

As organizations grow, this gap becomes impossible to ignore. Productivity slows. Burnout rises. Teams start avoiding the office altogether because it doesn't support the work they actually need to do. That's where enclosed acoustic pods change the equation — offering immediately deployable private space without construction, downtime, or long renovation timelines.

30 min

Daily focus lost to workplace noise[1]

Interruptions add up to ~120+ hours of lost focus per employee each year.

64%

Noise makes it harder to concentrate[2]

A majority of employees say background noise disrupts concentration in open offices.

23 min

Time to regain focus after interruption[3]

After a distraction, it can take ~23 minutes to fully return to the task.

52%

Stress reduction with access to quiet space[4]

Employees with access to enclosed spaces report lower stress and higher satisfaction.

A well-designed quiet workspace doesn't just reduce noise — it restores predictability and control to the workday. Employees gain access to a space where they can think, meet, and communicate without distractions, while the rest of the office benefits from lower ambient noise and fewer disruptions.

These private environments reduce "task switching costs," support sensitive conversations, and relieve pressure on traditional meeting rooms. Instead of fighting for a conference room or stepping outside for privacy, teams can step into a designated space that is comfortable, sound-controlled, and ready in seconds.

Pods offer another advantage: agility. As teams shift, reorganize, or expand, you can reposition the spaces instantly instead of building new rooms. The result is a more flexible, human-centered workspace — one that protects focus, improves communication, and helps organizations adapt quickly to changing demands.

BUILT FOR
SILENCE

Quiet you can feel — engineered from the inside out.

Performance Acoustic Fabrics

Each interior panel is wrapped in high-performance acoustic fabric designed to control reflections and reduce echo. Available in multiple curated palettes, our fabrics bring both warmth and function to the space—helping your calls sound clearer and your pod a warm, natural feel.

Active Ventilation

A quiet, four-fan airflow system refreshes the air every 60 seconds without adding noise or creating drafts. It keeps oxygen levels comfortable during long meetings while maintaining the pod's acoustic integrity.

Interior Options for Any Environment

Choose from tailored interior colorways, upgraded upholstery, and multiple furniture configurations to match your brand. Whether you need a focused single-seat layout or a more collaborative setup, each pod adapts to your workspace and work style.

> **"It's become the most popular meeting room in our office—everyone wants the PrivacyPod."**
>
> NICK GARDNER,
> EVENT TICKETS CENTER

BUILT FOR THE
WAY YOU WORK

Every detail refined for comfort, clarity, and daily use.

Motion-Activated LED Lighting

A high-CRI LED panel delivers bright, natural illumination ideal for video calls and detailed work. A PIR motion sensor automatically turns the lights on as you enter and off when you leave—saving energy and always keeping the pod ready.

Crafted Touchpoints

Every surface inside the pod is intentionally designed — from the rigid aluminum frame to the smooth, matte finishes that resist wear in high-traffic spaces. Hardware, sightlines, and material transitions are engineered to feel consistent and premium, creating an experience that reflects the same attention to detail as the work done inside.
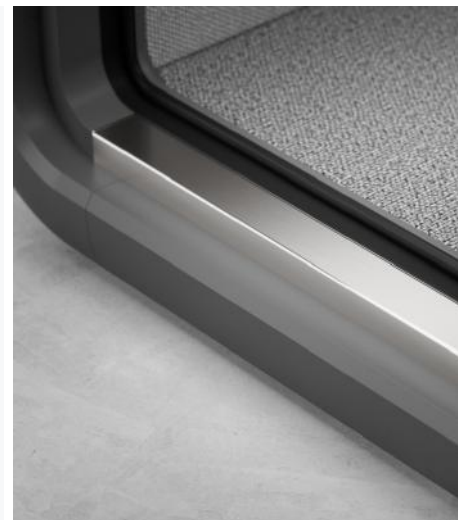

Precision Door Closure

A reinforced frame, concealed closer, and dual-seal perimeter work together to create a smooth, solid, acoustic tight door experience. Opened, it glides effortlessly. Closed, it locks out noise and keeps conversations private.

Built for Real Offices

From the rigid alloy structure to the impact-resistant finishes, every component is engineered for longevity in high-traffic environments. These pods are made for continuous use—day after day, team after team.

> **"Our PrivacyPod gives our patrons the quiet, private space our building was missing."**

Why **PrivacyPod**

Modern workplaces demand spaces that adapt as quickly as the teams inside them. PrivacyPod was created to offer a flexible alternative to construction—quiet rooms that install in hours, move when your floorplan does, and provide reliable noise control day after day.

Whether used for deep work, hybrid meetings, wellness breaks, or private conversations, each pod is built with engineered materials, thoughtful ergonomics, and a relocatable structure that fits naturally into any environment.

From schools and libraries to corporate HQs and healthcare settings, PrivacyPod brings calm, focus, and clarity back into open–plan spaces—no renovation required.

①	Fresh–Air Ventilation System	⑤	LED Ceiling Lighting
②	Double-layer Laminated Glass	⑥	PET Acoustic Felt Interior
③	Lighting & Ventilation Controls	⑦	Power & Charging Module
④	Structural Aluminum Frame	⑧	Compact Laminate Furniture

Solo Working

A quiet, distraction-free environment for deep concentration, writing, or individual creative work.

Phone Calls & Video Conferences

Optimized sound quality and lighting make the pod an ideal setting for sales calls, virtual meetings, and sensitive discussions.

Group Meetings

Comfortably supports small-team conversations without disrupting neighboring work areas.

Private Conversations

A secure space for confidential discussions—HR meetings, student support, healthcare consultations, and more.

Focus & Deep Work

A calm, interruption-free space for writing, strategy, analysis, or detailed tasks that require full concentration.

Rapid Installation

Modular construction allows your team to add fully functional meeting space in a single afternoon—no permits, no renovation, no downtime.

Comfort Control / **Fresh–Air Circulation**

Inside a PrivacyPod, comfort isn't an afterthought—it's engineered into every moment.

Our pods use a quiet, balanced airflow system paired with intuitive lighting controls to create a workspace that feels natural, calm, and easy to personalize. Whether you're settling in for a focused work session or hosting a video call, temperature, brightness, and airflow respond instantly to your needs.

The control dial gives you full command of the environment without overwhelming you with switches or complexity. Adjust ventilation, shift between warm and cool lighting, brighten the space, or power the system down—all from a single, minimal interface designed to be as familiar as a desk lamp dimmer.

Thoughtfully tuned airflow, high–quality LEDs, and a user–friendly interface work together to create an interior environment that feels fresh, clear, and comfortable from the moment you step inside.

Airflow Control

Brightness Control

Color Temperature

Main Power

Fresh-Air Engineering

Quiet circulation designed for comfort without distraction.

02

Low-Noise Centrifugal Fans

Instead of traditional axial fans, PrivacyPod uses centrifugal modules tuned for smooth airflow at low RPM. The result is noticeably quieter air movement, reduced vibration, and consistent comfort without the "fan hum" typical in smaller enclosures.

01

Balanced air pressure

PrivacyPod uses a dual-direction airflow path that gently pulls fresh air in and moves warm air out. This prevents pressure buildup and avoids the discomfort sometimes experienced in sealed rooms—keeping the environment comfortable even during long sessions.

04

Sound-Dampened Air Ducts

Air passages are lined with dense acoustic media that absorbs turbulence and minimizes sound transfer. This allows airflow to move freely while keeping conversations private and maintaining the pod's quiet interior character.

03

Auto-Cycle Mode

To keep the interior fresh between uses, the pod automatically runs a brief ventilation cycle on a timed schedule. This maintains air quality, prevents stale buildup, and ensures every user enters a clean, ready environment—no manual reset required.
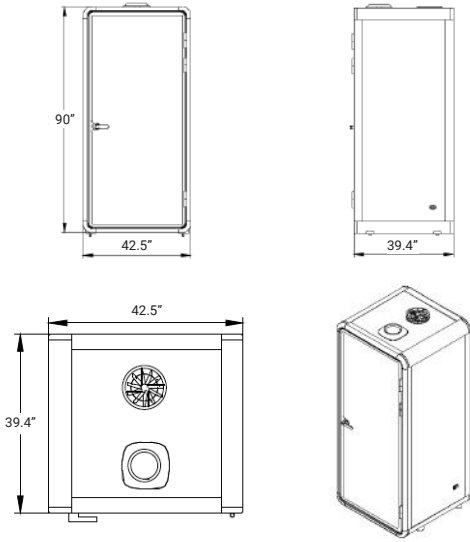

S Pod

For every call. For every office.

Persistent noise and a lack of meeting areas contribute to decreased productivity, creativity, and job satisfaction, while increasing stress.

Our 1 Person Pod provides a dedicated space for solo calls, virtual meetings, and concentrated tasks, permanently eliminating the fights over conference rooms and having to take calls in the hallway.
