

PHARO

CATTLE COMPANY®

Spring 2026
Bull Sale Catalog

440 Solar Bulls
— Three Bull Sales —

Dear Friends,

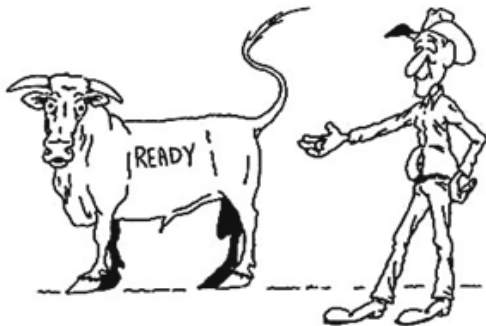

Higher, higher, higher! Calf prices have increased substantially every year since 2020. They have gone up a total of 250%. Put another way, your calves are worth \$1800 more per head than they were worth just six years ago. That's a HUGE increase in revenue!

I know I sound like a broken record when I say, I hope you are using a portion of your windfall profits to prepare for life with much lower calf prices. No one knows how long these record-high prices will last — but we all know, they won't last forever. That's the nature of this game. It's been that way since 1890.

It's always better to be prepared a year too early than a day too late. Do what it takes to secure the future of your business. Pharo Cattle Company® has the genetics and the philosophies you need to produce more total pounds of beef at a lower cost. We're also working on ways to increase the value of the beef you produce.

Kit Pharo

Selling Bulls for 36 Years and Counting

Sale Information

Only the best sell. These 440 ranch raised bulls uniquely represent both our philosophies and our breeding program. They have been carefully bred and selected to meet the demands of the commercial cowman. Several herd mates that did not live up to our expectations have already been culled. We keep extensive records on our cattle and we follow a very strict selection and culling program that is based on facts and figures, as well as on frequent observations and evaluations.

Cataloged. The bulls have been cataloged according to the sale they will be sold in and their breed groups. Each bull will be identified with a lot number that corresponds to the number on his PCC® ear tag. We will sell the bulls in lot order — from low to high. For the most part, the bulls will be cataloged by sire groups (1/2 and 3/4 brothers). This will make it easier for you to purchase a set of bulls that are closely related. We will start each sire group with the highest rated bull in that group.

We have provided extensive information on each bull to help you make the right selections. This information is explained on page 11. We urge you to look for bulls that are strong in the traits your cowherd is weak in, but always remember to keep “balance” in mind because single trait selection can quickly wreck a cowherd. Registration certificates on all registered bulls will be transferred to the buyer.

NO Grain Required. Because it is the right thing to do, we develop our bulls on a 100% grain-free ration. Our forage-tested bulls are tested for their ability to perform on grass with some supplementation. Our yearling bulls are developed on a grain-free, high-roughage (mostly hay) ration designed for moderate gains of only 2 to 2.5 pounds per day.

Health and Fertility. We maintain a thorough health and vaccination program. These bulls have all passed a health and breeding soundness examination and have been cleared for interstate transportation. All bulls have tested negative for PI-BVD and trichomoniasis. They are **guaranteed breeders!**

Semen Interests. On designated bulls, we retain the right to collect, use and market semen at some future date. As purchaser of the bull you will receive a 25 percent revenue-sharing semen interest, along with full possession of the bull. If done at all, semen will be collected at your convenience and at PCC's expense. This in no way affects your use of the bull! Anyone with a semen interest will be allowed to collect and store semen for in-herd use with no obligation to others with a semen interest. In the event semen is marketed and revenue is produced, the resulting proceeds, minus incurred expenses, shall be divided among those who own a semen interest. Designated bulls will be marked “RETAINED SEMEN INTEREST” in the catalog.

Cowboy Auction. Although our unique cowboy auction has an auction format, it has no fast-talking auctioneer and no loud, in-your-face bid takers. Everyone who has attended one of our Cowboy Auctions has appreciated and enjoyed it. Every bull will have a base price posted in this catalog. When it is time to sell a particular bull, we will ask those who are interested to raise their buyer number. If there is only one number in the air, the bull will be sold to that number at the base price. If there is more than one number in the air, we will increase the price in increments of \$250 to \$1000, at the auctioneer's discretion, until only one number remains. This provides a very simple, low-pressure way to purchase bulls. You will always know what the bid is and you will always know who is bidding against you.

The only problem with our Cowboy Auction is there can be a tie bid when the last two (or more) buyer numbers drop out at the same time. When that happens we will give the bid to the bidder with the lowest buyer number. The other bidder(s) will then be required to increase the bid by \$50 or \$100 (up to the next \$100 increment) to stay in the auction. If he increases the bid, then the bidder with the lowest buyer number can raise the bid another \$100, and so on. We can usually break a tie in 5 or 10 seconds.

Guaranteed Calving Ease. Most of the bulls offered in this catalog can be successfully used on virgin heifers. We give each bull a 1 to 5 rating for calving ease. Bulls with a 5 rating are the absolute best, but those with a 3+ to 4+ rating are also recommended for use on most heifers. For the most part, bulls with a 3 rating are breed average for Angus and Red Angus. That's what everyone else is selling!

We are so confident in the calving ease of our bulls with a 5 rating that we're going to do something that is unheard of in this business. We are going to provide a one-year **calving ease guarantee** on all bulls that have a 5 rating for calving ease. For every calf you have to pull that was sired by one of our 5-rated calving ease bulls, we'll pay you \$100. If a caesarean or other veterinary assistance is required, we will pay your vet bill. We want you to be able to look forward to your next calving season.

Genetic Defect Guarantee. Unlike many of our competitors, we will not sell a bull that is a potential carrier of any known genetic defect without DNA testing him to prove (guarantee) that he does not have a genetic defect gene. We guarantee that all of the bulls selling in this sale do not carry a gene for any known genetic defect.

Repeat Buyer Discount. There is nothing more valuable to us than a happy customer who keeps coming back. This is our way of showing our appreciation. If you purchased a bull at one of our 2025 spring or fall sales, you will receive a **5% Discount** on all the bulls you purchase at any of these sales.

Quantity Discounts. To make it easier for you to purchase all your bulls at one sale, we offer quantity discounts. If you purchase five or more bulls at any one sale, we will give you a **5% Discount** on all the bulls you purchase at that sale. If you purchase ten or more bulls, we will give you a **10% Discount** on all the bulls you purchase at any one sale. Do the math — that's **one FREE bull** for every nine that you purchase at any one sale! You cannot go together with others to receive this discount.

You cannot combine discounts to receive a higher discount.

Announcements from the Auction Block and supplemental information provided at the sale will take precedence over the printed matter in this catalog.

Leading-Edge Genetics

Pharo Cattle Company® has Leading-Edge Genetics that you simply cannot find anywhere else. We are so far ahead of the curve, the status quo beef industry doesn't know which way we went.

A2 Beta Casein. This is a milk protein that increases the milk's digestibility and nutritional value. Dairy cows are routinely tested for A2/A2 because A1 milk is known to cause autoimmune diseases in people. If A1 milk is not good for people, it's probably not good for nursing calves.

Nearly 90% of our AI sires and sale bulls are A2/A2. Steve Campbell, with Tailor Made Cattle, estimates that only 50% of mainstream beef animals are positive for A2/A2. Use the Catalog Index to find the A2/A2 test results on the bulls in this catalog. You can also use our unique Quick Sort program to sort for A2/A2.

Tenet® Beef. In the fall of 2024, we started DNA testing PCC® animals for Tenet®. Animals that are Certified Tenet have the genetics for superior beef tenderness. Many studies and surveys have revealed the primary complaint consumers have with beef is the inconsistency in tenderness.

After 38 years of private research, Frank Hendrix and his team at Tenet® Beef created a DNA test that identifies beef animals with the highest level of meat tenderness. He took his test to a couple of big-name AI companies because their bulls are in the pedigree of most of the beef animals in the United States. Frank was disappointed that less than 2% of their bulls tested positive for Tenet®.

Over 70% of our AI sires are Certified Tenet®. Sixty-three percent of the bulls in our spring bull sales are Tenet. The Certified Tenet® bulls in this catalog are identified with the logo to the right in the upper right-hand corner of the catalog squares.

Congestive Heart Failure. Congestive heart failure (brisket disease) is no longer just a high-elevation concern. It has become one of the leading causes of death in feedlots in the plains states. This creates significant economic losses because the animals die late in the finishing period.

We started testing our Colorado sale bulls in 2025. It appears that our cattle have a much lower risk factor for Bovine Congestive Heart Failure (BCHF) than mainstream cattle, probably because our cattle have not outgrown their circulatory system.

We guarantee the 59 lowest risk Colorado bulls will not pass on any congestive heart problems to their offspring. These bulls are guaranteed to work at high elevations. They are identified by a red heart  in the catalog square. You can also use our Quick Sort program to sort for these low-risk bulls.

Pre-Sale Meetings

Say it ain't so... Rumor has it that Kit Pharo asked a world-renowned showing judge to speak at Pharo Cattle Company's pre-sale meetings.

The rumor is true. Kit got acquainted with PJ Budler on his recent trip to South Africa — and was very impressed. PJ has very similar views and philosophies on ranching as Pharo Cattle Company® has. PJ has broken away from the status quo herd.

PJ knows cattle! He recognizes what is structurally correct and what is structurally incorrect. After seeing thousands of pictures of structurally incorrect bulls that are being sold this spring, I am led to believe PJ is one of very few people outside of Pharo Cattle Company who knows what is right and wrong.

PJ Budler was raised on a fifth-generation cattle operation in South Africa. At age 15, he founded BonHaven Beef Cattle. Between 1996 and 2012, he grew BonHaven to five locations in three different countries. In 2012, PJ relocated to Texas where he is the international business manager of Trans Ova Genetics.

PJ stays very busy consulting, speaking and judging cattle shows. He has judged 108 different breeds of cattle in 51 different countries. We're excited about having him speak at all three of our pre-sale meetings. PJ is guaranteed to challenge, to enlighten and to educate you.

These meetings are free and open to the public. They will take place at the sale barn the night before each sale at 7:00. No need to RSVP.

Stay-At-Home Options

We prefer everyone to be in attendance on sale day. Realistically, however, we know there will be some scheduling conflicts and distance limitations. In these cases, we have arranged for you to be able to participate in our bull sale on an absentee basis. Once again, we have three Stay-At-Home options for you to choose from to complement our FREE and Very Afford-a-BULL delivery options.

When you register to participate via one of our Stay-At-Home options, PLEASE call us at **800-311-0995** to let us know what delivery point you want to use.

In an effort to cover liability issues and to protect the buyer's interests, we require that a Basic 30-Day Warranty be purchased for all bulls purchased through our Stay-At-Home options. The cost of this coverage is 2% of the purchase price. See bottom of page 10 for details.

Sight-Unseen Bidding. If you are unable to attend our sale, we can arrange to have someone confidentially handle your bidding for you. We guarantee that your bulls will be purchased at the lowest price possible. Your bids will never be abused! Over the years, 30 to 40 percent of our bulls have been sold to customers who use our Sight-Unseen (SUS) program.

If you will allow us to help select the bull(s) that best fit your needs, we will **guarantee satisfaction** on your sight-unseen purchases. Call **Kit** or **Tyson** at **800-311-0995**, **Bobby Thoman** at **855-541-5412**, **Robert Pulliam** at **844-541-5412** or **Paul Landrigan** **855-548-5412**. We will run a Quick Sort (see page 12) with you or for you. Our Sight-Unseen (SUS) program takes most of the risk out of purchasing bulls. Helping you with your purchases, however, places a lot of responsibility on us, so **please call early!** Except for an emergency, all Sight-Unseen bids must be received by **5:00 pm** three days before each sale.

Internet Bidding. Superior Productions offers the convenience of bidding via the internet at **Bid.SuperiorLivestock.com**. To use this option, go to **PharoCattle.com/Superior** and follow the outlined steps. We also recommend watching Superior's *Online Bidding Tutorial* prior to registering. This will provide exact instructions on how to participate in our unique Cowboy Auction via the internet. On sale day, you will watch and listen to the sale at **Bid.SuperiorLivestock.com**. If you experience any technical difficulties, give Superior a call at **800-422-2117**.

Phone Bidding. While *limited* phone bidding assistance is available, we strongly encourage customers to use our internet bidding or our Sight-Unseen Bidding options. If you're uncertain about online bidding or won't have Internet access during the sale, please contact Superior Livestock *prior to sale day* at 800-422-2117. Once registered with Superior, call PCC at 800-311-0995 to let us know what delivery point you want to use and to receive your buyer number.

Paying for Purchases. Repeat customers who make purchases via one of our Stay-At-Home options will be contacted after the sale and asked to mail a check as soon as possible.

Direct Debit Authorization (Electronic Funds Transfer). We have the capability of handling your bull purchases by using a Direct Debit Authorization. This has proven to be very quick and easy for everyone involved. If you choose to utilize this payment option, call us at **800-311-0995** before the sale. We will need permission to make an electronic draw from your account. **PLEASE use the Direct Debit Authorization Form provided in the back of this catalog.**

NOTE: This payment method will be **required** of all new customers who purchase bulls through one of our Stay-At-Home options.

PCC's One-Year Guarantee...

Our bulls have always had a reputation for being tough as nails. They also have a reputation for being able to breed more cows for more years. Even so, problems can and do occur. Therefore, all bulls purchased at a cataloged PCC® bull sale will be guaranteed for one year from the date of purchase against injury or loss that renders them incapable of breeding, with the following exceptions.

Exceptions:

- Incurred during transportation
- Caused by motorized vehicle and/or equipment
- Caused by disease, nutrition or poisoning
- Caused by carelessness or neglect
- Caused by failure to maintain acceptable animal husbandry
- Caused by poor management (e.g., low cow to bull ratio)
- Caused by acts of God, war, insurrection or terrorism

This guarantee applies only to bulls that have been maintained, at all times, by the original purchaser for breeding purposes that are consistent with acceptable industry standards.

All injuries must be examined by a licensed veterinarian within 48 hours of injury. If the attending veterinarian deems treatment would be in the best interest of the animal, then treatment should be administered. Customer must notify PCC immediately after the bull has been examined by the veterinarian.

A letter from the attending veterinarian that identifies the animal, identifies the problem and provides an expected prognosis will be required. Pharo Cattle Company® reserves the right to get a second opinion from another veterinarian. Getting the bull back into breeding condition will always be our first and primary objective.

If it is determined that the bull has sustained permanent damage, PCC will issue a credit for the purchase price less salvage value. If it is determined the bull should be functional for the following breeding season, PCC will issue a credit for 50% of the purchase price, and the customer will keep the bull. The credit must be used at a cataloged PCC bull sale within one year of the purchase date.

Customer Service has always been very important to us. This will just make it easier.

30-Day Warranty...

Our 30-day Warranty covers the bull for 30 days after the sale. We require it on all bulls purchased through one of our three Stay-At-Home options, as well as on all bulls that will be delivered to one of our delivery points. This coverage is intended to cover liability issues and to protect the buyer's interests until the animal is safe and sound at its new home. The cost of this warranty is 2% of the purchase price. It will automatically be added to the purchase price of all Stay-At-Home purchases, as well as to purchases that will be delivered to one of our delivery points.

Sale Information and Data — Explained

Actual and Adjusted Weights: We have stopped showing weights, because that information is horribly misleading and will cause customers to make bad decisions. The reason most cow-calf producers have cows that are too big to be profitable is because they have been single-mindedly focused on increasing production per cow (bragging rights). As production per cow increases, production per acre (profit) decreases. The only producers who will be profitable when calf prices drop will be those who are focused on increasing production per acre. It doesn't matter how big your cattle are if they're not profitable!

Birth Weight Ratio: A ratio shows how a bull compares to his within-herd contemporaries. Ratios are much more useful than actual birth weights. Actual birth weights can be extremely misleading, causing customers to make bad decisions. A ratio of 100% is average for that herd. A ratio of 105% is 5% better than herd average, while a ratio of 95% is 5% worse than herd average. The birth weight ratios have been inverted. Therefore, the lowest birth weights will have the highest ratios.

Birth Weight EPD: EPD is short for Expected Progeny Differences. It's a prediction of the difference between the average progeny of one individual bull and the average progeny of other individual bulls. Since EPDs are able to take into account the differences that exist between environments, they can be effectively used to compare animals from different herds. Within a breed, EPDs can provide some very valuable information. For example, a bull with a birth weight EPD of -2.0 should sire calves that are five pounds lighter than a bull with a +3.0 birth weight EPD.

ADG on Test: Our yearling bulls were put on a short feed test to help us compare their growth potential. They were fed a grain-free, high-roughage ration designed for moderate gains of only 2 to 2.5 pounds per day. We expect our bulls to gain weight during their first breeding season.

Our forage-tested bulls were tested for their ability to gain weight on grass. Bulls that perform well in a forage test should sire cattle that are also efficient foragers. Instead of posting individual rates of gain, we are posting individual gain indexes. This figure accurately compares each bull to his herd mates.

Scrotal Circumference: Actual scrotal measurements for the older bulls have been posted in this catalog. Adjusted scrotal measurements for yearling bulls will be provided on a supplement sheet prior to the sale. The supplement sheet will be sent out via email. Keep in mind there is no fat in the scrotum of these grass-developed bulls. Therefore, you cannot compare our grass-developed bulls to grain-developed bulls. Testicle size, in relation to frame size, is a good indicator of early maturity. This trait can be passed on to a bull's daughters.

Frame Score: A frame score of 2 to 5 seems to be optimum for the cow herd, as well as the feedlot. The smaller the frame, the more efficient the cow — and the more pounds produced per acre. The only difference between a frame 4 and a frame 5 is a couple of inches between the ground and the belly, which doesn't weigh anything and is impossible to eat! Our most efficient cows have a frame score of 2 to 4 — with enough thickness to weigh 1050 to 1250 pounds.

Frame score is hip height adjusted for age. Unfortunately, the formula used for young bulls is based on feedlot-developed bulls. It will not work on our grass-developed bulls. Therefore, we use XS, S, S/M, M, M/L and L (equivalent to frames 2 to 5.5).

Scores and Ratings: We have provided scores and ratings for how we feel these bulls should be rated for **Calving Ease**, **Disposition** and **Maintenance Requirements**, as well as for eight more important traits. Each bull is rated 1 to 5, with 5 being the best and 3 being about average. **Fleshing Ability**, **Disposition**, **Hair Coat** and **Grass Efficiency** are discussed on pages 12 and 13.

Valuable information is also provided on the mother of each bull. **Cow Age** is the age at calving. At calving, we give each cow an **Udder Score** from 1 to 5. A 3 would be an average, yet very functional udder, while a 5 would be near perfect. Remember udder score will decrease as cow age increases.

Quick-Sort Program

We have the ability to help you quickly sort out the bulls that fit your wants and needs. This program will save you hours and hours of time and frustration.

We have an easy, do-it-yourself version available in our online (internet) catalog. Just enter the criteria you want to sort for, and before you can go get a cup of coffee the sorting will be completed. If you prefer, we can do the sorting for you. Call us at **800-311-0995**.

We suggest you DON'T select for any more criteria than absolutely necessary — unless you have an unlimited bull-buying budget. If your budget has some limits, however, we strongly urge you to keep your list of potential bulls as long as possible. Please keep in mind that more is NOT always better.

Sorting Criteria

- Breed
- Color
- Lot Number
- Sire
- Base Price
- Registered or Not
- Tenet® Certified
- A2/A2
- Frame Size
- Disposition
- Calving Ease
- Overall Rating
- Grass Efficiency
- Fleshing Ability
- Thickness Score
- Muscling Score
- Masculinity Score
- Hair Coat Score
- Fly Resistance Score
- Scrotal Circ.
- Low BCHF Risk
- High Altitude Score
- Marbling Ratio
- Tenderness Score
- Dam Udder Score
- Dam Age

NO ONE ELSE provides as much useful information as we do.

Call us at 800-311-0995

If we are unable to help you with your Quick Sort, we'll give you \$1000 to use toward your bull purchase.

Grass Efficiency

We've come to the conclusion that our grass efficiency score may be the most important score for cow-calf producers to select for. What is grass efficiency? Johan Zietsman, a rancher/consultant from Zimbabwe, says, "Grass-efficient animals will look like eight pounds of sugar in a 5-pound sack." In other words, they can put a tremendous amount of weight in a relatively small package.

For the most part, the formula we use to score grass efficiency is based on early maturity. Early maturity is of utmost importance to cow-calf producers. Unfortunately, the status quo beef industry's incessant selection for more and more lean growth for the past 50 years has had a very detrimental effect on early maturity. When sexual maturity takes place, muscle and skeletal growth slow down and the animal is able to start storing up energy in the form of fat. Fat deposition is critical to reproduction.

Based on university research, we are able to use the adjusted hip height of young bulls to predict their mature weight at a body condition score of 5. An animal that is 60% of its predicted mature weight is better than one that is 50% of its predicted mature weight. Bulls with a 4+ to 5+ rating for grass efficiency will be the very best at producing early-maturing, highly-fertile, long-lasting replacement females. Bulls with a 4+ to 5+ rating for grass efficiency will also be the very best at producing steers that will excel in a grassfed beef program.

Fleshing Ability

The bulls in this catalog have all been rated for fleshing ability. Simply put, this is the animal's ability to put on and maintain good body condition, even with a limited amount of feed. When feed is plentiful they will rapidly improve their condition. Later, this extra condition can serve as a reserve to help the animal survive the tougher times.

Over the years, we have noticed that our easy fleshing cows seem to breed back earlier and stay in the cowherd much longer than our hard-keeping cows. There appears to be an extremely high correlation between fertility and fleshing ability. Therefore, fleshing ability has become one of the most important economic traits we select for. Hard-keeping cows will eventually fail to breed back in a program as tough as ours. Fleshing ability is a trait that needs to be bred in — NOT fed in.

Easy-fleshing bulls should sire daughters that are easy-fleshing. Our sale bulls receive a rating of 1 to 5 for fleshing ability, with 5+ being the best. We believe you should pay special attention to this trait if you are raising your own replacement females.

Disposition

Poor disposition in a cowherd can be created by rough handling, but it is also very heritable! A bull with a bad disposition will not only cause problems himself, he will also sire replacement females with similar disposition problems. Before you know it, your entire cowherd will become much more difficult to handle and work with.

At calving we give each cow a score for disposition, from 1 to 5. If there is a problem, we eliminate it. We want a momma cow that is protective and concerned about her new baby, but not to the point that she creates a hazard to our health. Every time our cattle are sorted or run through the chute, we monitor and record disposition problems. We will not tolerate cattle that are nervous, wild or hard to handle.

All of our bulls have been put through a simple test that allows us to give them a score for disposition, from 1 to 5. We sort each bull off by himself in an alley and crowd him between two people. This measures the bull's comfort zone, as well as his disposition. A bull that will stand calmly, with no signs of excitement or nervousness, will receive a high score. If a bull gets nervous and tries to run past us he will receive a low score. Each bull is rated 1 to 5, with 5 being the best. Many of our customers say our 3 disposition bulls are better than the bulls they've been purchasing from other programs. However, if you are only purchasing one bull, we suggest you purchase bulls with a 4 or better disposition.

Hair Coat

Hair coat is an excellent indicator of animal health and well-being. A healthy beef animal will have a vibrant-looking hair coat — slick and shiny in the summer and cuddly-looking in the winter. In contrast, an unhealthy beef animal will have a dull, dead-looking hair coat.

An animal's ability to shed off early in the spring is another very good indicator of health and well-being. The late Jan Bonsma had much to say about this subject. Among other things, he said, "In selecting livestock for functional efficiency there is no single factor which can give such positive results as early hair shedding. Animals can shed their hair early in the spring only if they are well adapted to their environment, are in good nutritional status, and have the correct hormonal balance."

We have been observing and scoring hair coat for many years. The fall of 2006, though, was the first time we put hair coat scores in a sale catalog. A 5+ hair coat is as good as they get. A 3 hair coat is about average. If you live in a relatively hot and/or humid environment, hair coat is a trait you should pay special attention to. Bulls with a 4 to 5+ hair coat should work well in the south and southeast.

Ultrasound Scanning

There has been a rapid-growing interest in grass-based genetics and grass-fed beef. In the past ten years, we have sold bulls and semen to well over 100 people who produce and market grass-fed beef. Although that is a small share of our overall market, it is still quite significant.

Finding genetics that work well in a grass-based program is becoming more and more difficult in the industry's corn-based genetic pool. To enable producers to more quickly identify cattle with the genetic makeup to excel in a grass-finishing program, scientists have perfected a live animal

carcass software program specifically for that purpose. We have been using this program since the spring of 2006. Cattle that can produce a superior carcass on nothing but grass will be able to do the same thing on grain.

All of the bulls in our fall sales have been scanned by Clay Nash. We believe you will find this data to be quite impressive. The ultrasound data, along with more explanation, can be found on pages 130 to 144. For help in using this information, feel free to call Clay at 870-897-3167. We also suggest you read the article Dr. Williams wrote on page 129.

Low-Maintenance

Many of the traits we now measure and have EPDs for do not have a direct effect on ranch profits. Several breed associations are working on ways to quantify and compare a few economically relevant traits (ERTs). These are traits that directly affect profits.

There are two relatively new ERTs that everyone at Pharo Cattle Company® is extremely excited about. They predict the amount of energy required by mature cows to maintain body weight. We've known for many, many years that this is something that can have a tremendous impact on ranch profits.

The Angus Association has created a Cow Energy Value (\$EN) EPD. The higher the number the better. The Red Angus Association has a similar EPD called the Maintenance Energy (ME) EPD. The lower the number the better.

Nearly all of the bulls promoted by big-name AI companies and mainstream seedstock producers literally stink in the area of cow energy requirements. They have way too much milk, growth and size to fit in a real-world, ranch environment. In contrast, nearly all of the genetics used by Pharo Cattle Company excel in this area — REALLY excel!

Cow Longevity

How can you identify the best and most profitable cows in a cowherd? The answer is so simple most people miss it. The best and most profitable cows in an unpampered cowherd will always be the oldest cows. These cows have done everything right without missing for at least ten years.

Honest, unpampered, teenage cows have addressed all of the issues relative to fertility, feed requirements, frame size, production, structural soundness, mothering ability and disposition. These are time-proven cows that can seldom be improved upon.

Cow longevity is the most important trait to select for because it encompasses all of the other important maternal traits. Unfortunately, most registered breeders (bull producers) make excuses for their cows and give them a second chance. They may have some old cows — but nearly all of their old cows will have some major problems.

If your bull producer doesn't get rid of his problem cows, he will be passing all of those problems on to you. You won't be able to take the problems out of your herd until you switch to a bull producer who thinks like you do.

The Traits We Evaluate...

...and Score

From the very beginning, Pharo Cattle Company® has been evaluating and scoring bulls for a variety of traits — traits that most seedstock producers have never even considered. Suffice it to say, we are *Different for all the Right Reasons*. Each bull is individually sorted off and evaluated in a 12-foot sorting alley. A rating of 5 is best, with a 3 being average. Below are eight of the traits we evaluate and score.

- **Fleshing Ability...** The amount of condition (fat) that a bull carries under his hide. While some bulls are able to get fat on limited feed resources, others do good just to hold their own. For the most part, we use the ultrasound measurement for back fat thickness to score this trait.
- **Thickness...** This is basically a measurement of depth and width. It has little to do with muscling. What we are looking for is the most pounds for every inch of height. High-volume animals with a lot of heart girth are the type required for low-input, grass-based programs.
- **Muscling...** Since we're in the beef business, we need animals with substantial muscling. The best place to look for natural muscling is in the twist area (between the rear legs). Light-muscled animals are narrow and cut up high in the twist. In contrast, heavy-muscled animals are deep and wide in the twist.
- **Masculinity...** A bull should look like a bull — and the sooner he does, the better. For the most part, we are looking for the presence or absence of secondary sexual characteristics. The neck and the head are the best places to look. We like a bull with a thick, wide neck that has a very pronounced crest on top. Bulls also need to have a “bull” head — not a “cow” head.
- **Overall Rating...** This is overall visual appearance or eye appeal. While some bulls are extremely attractive, others are very plain in appearance. The most attractive bulls will usually have high scores for most of the other traits we evaluate and score — but not always.
- **Hair Coat...** Healthy, well-adapted bulls will have a lively looking hair coat year-round. During the winter months, the hair should have a soft “teddy bear” look and feel to it. In the summer, the hair coat should be short, slick and shiny — shiny enough to almost see your reflection. The presence of dull, dead hair will lower the hair coat score.
- **Fly Resistance...** This is not as difficult to evaluate and score as some think. We simply assess how many flies each bull has. There is often a big difference between bulls within the same herd. While a few bulls are black with flies, others will have very few flies. In the cool morning hours, flies will be on the animal's back. As the day warms up, the flies will move to the shaded areas of the belly and legs.
- **Disposition...** Disposition is the last thing we evaluate and score. It is important for a bull to be separated from his herd mates for an extended period of time before we can accurately evaluate his disposition. As you are evaluating the bull for other traits, his disposition (good or bad) will begin to express itself. We like to crowd the bull from both sides to test his flight zone. Bulls that remain very calm receive a high disposition score — while those that show signs of fear, nervousness and/or aggression will receive a low score.

Texas Bull Sale

**Tuesday, April 7, 2026
1:00 PM (Central Time)
2605 Auction Barn Street
Cameron, Texas**

We have cataloged **95** bulls for our Texas Bull Sale. All of these bulls were developed on grass — with some hay and non-starch supplement. We want these bulls to be big enough to go to work, but we do not want them to be excessively fat. We expect them to gain weight during their first breeding season. They are all fall-born, coming two-year-old bulls. At the top of each page, it will say which breed is cataloged on that page. Bulls will sell in lot order.

60 Heat-Tolerant Composite

18 Red Angus 16 Angus

1 Polled Hereford

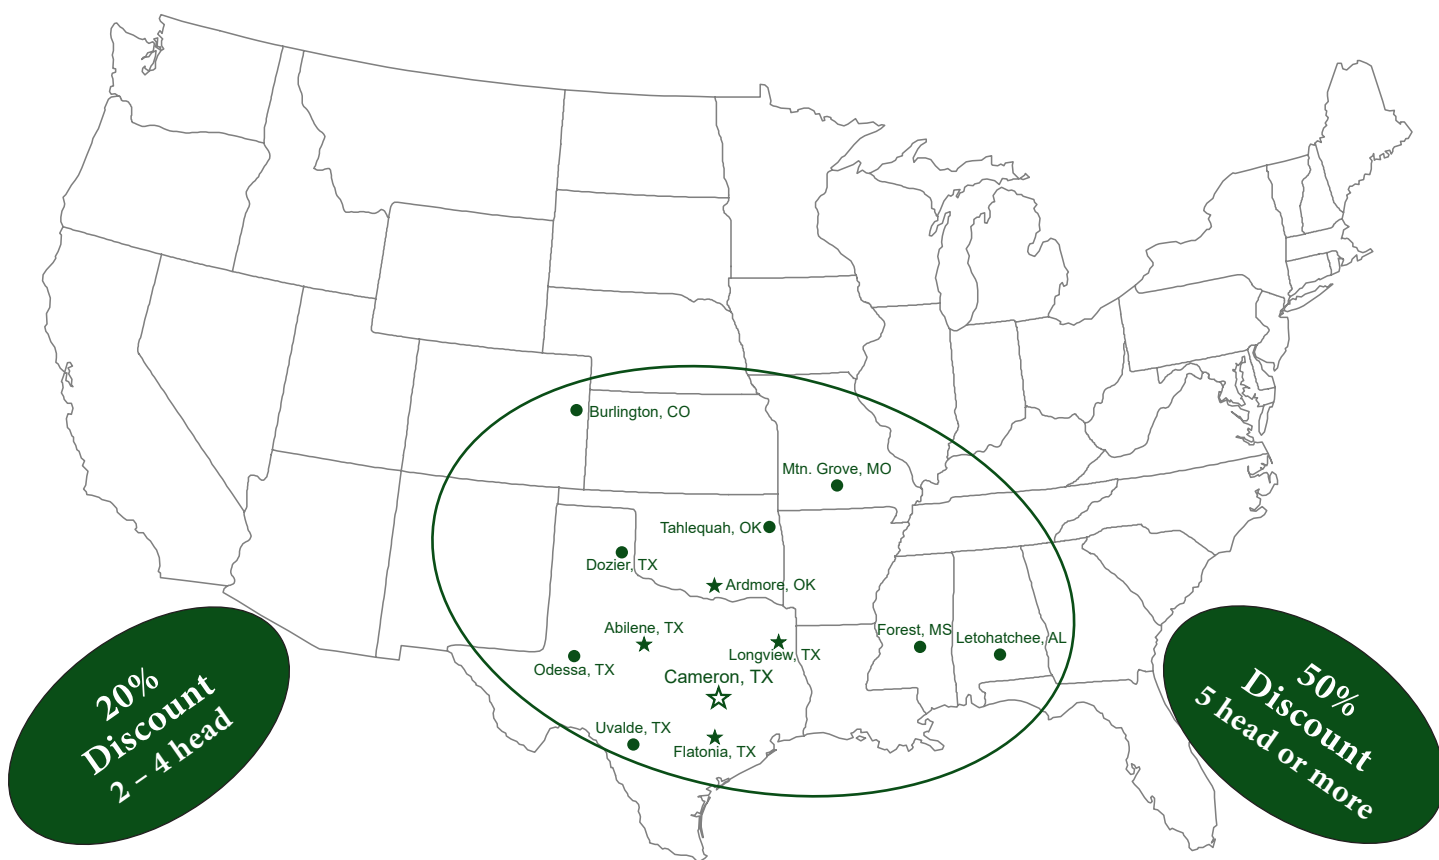

Texas Bull Delivery . . .

We are offering 4 FREE Delivery Points and 8 very Afforda-BULL Delivery Points from our Texas sale. For \$400 above the posted price, any bull purchased in our Texas Sale can be delivered to any of the delivery points on page 43. Those bulls will be delivered following the Missouri Sale. For \$600 above the posted price, any bull purchased in our Texas Sale can be delivered to any of the delivery points on page 81. Those bulls will be delivered following the Colorado Sale.

Contact Pharo Cattle Company® prior to the sale for specific delivery instructions for your location. If you plan to take advantage of our bull delivery service, you **must** notify PCC® **before** the sale or when you clerk out **at** the sale as to which delivery point you want to use. If you don't, your bull will miss his ride and you will have to come get him. Delivery is scheduled to begin the day after the sale. We will call you when we have your transportation lined up.

To address liability issues, we require that our **Basic 30-Day Warranty** be purchased on all bulls being transported to these delivery points. The cost of this coverage is 2% of the purchase price. See page 10 for more details.

~ Texas Heat-Tolerant Bulls (62% to 75% Tropical) ~

Since 2015, we have been experimenting with several different breeds and breed combinations to come up with some excellent genetic solutions to heat stress. The one thing we want to minimize is the use of Brahman genetics. Although Brahman cattle excel in heat tolerance, they are too big and inefficient to fit our low-input program. Brahman and Brahman-cross cattle also lack fertility, which is the most important economic trait for cow-calf producers. Two more problems with Brahman-cross cattle are disposition and carcass quality.

For the most part, we are experimenting with Bos Taurus breeds of cattle that have Spanish and/or African origins. These include Mashona, Creollo, Romosinuano, Tuli and Senepol. Although we are working with some purebred tropical cattle, we much prefer to create composite breeds that are the result of using our thick, easy-fleshing, moderate-sized Angus and Red Angus cattle as the base. The resulting composite cattle have a much more acceptable and marketable appearance.

For well over 20 years, we have had slick-haired Angus, Red Angus and Polled Hereford cattle working in hot, humid environments. We now have some Heat-Tolerant Composite cattle that work even better.

Missouri Bull Sale

**Monday, April 13, 2026
1:00 PM (Central Time)
8915 Business 60
Mountain Grove, Missouri**

We have cataloged 147 bulls for our Missouri Bull Sale. These bulls were developed on grass — with some hay and non-starch supplement. We want these bulls to be big enough to go to work, but we do not want them to be excessively fat. We expect them to gain weight during their first breeding season. They are all fall-born, coming two-year-old bulls. At the top of each page, it will say which breed is cataloged on that page. Bulls will sell in lot order.

**73 Angus 29 Red Angus
26 Heat-Tolerant Composite
3 Crossbred 12 Hereford 4 Black-Hided Red Angus**

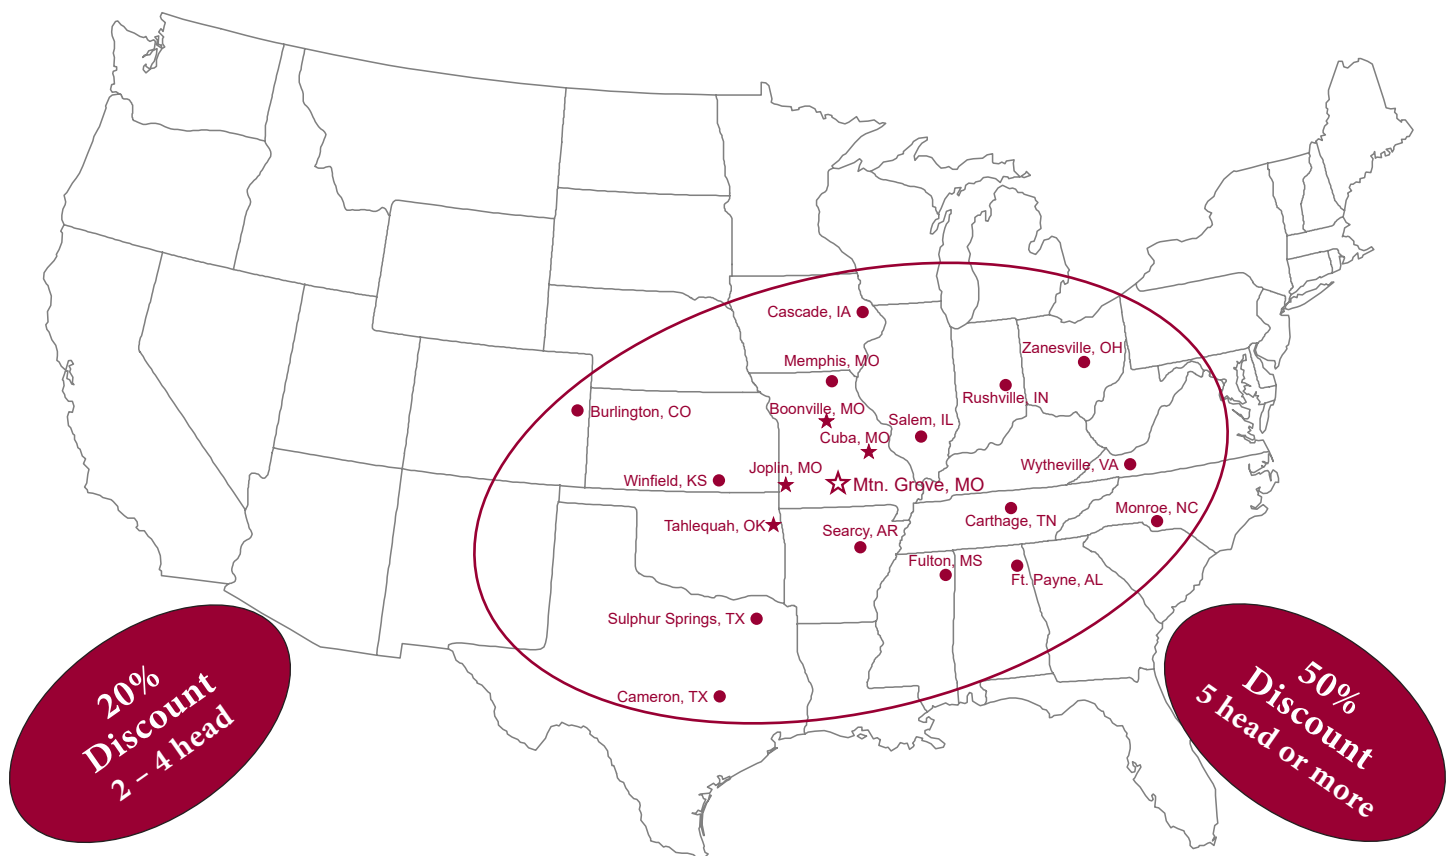

Missouri Bull Delivery . . .

We are offering 4 FREE Delivery Points and 15 very Afforda-BULL Delivery Points from our Missouri Sale. For \$400 above the posted price, any bull purchased in our Missouri Sale can be delivered to any of the delivery points on page 81. Those bulls will be delivered following the Colorado Sale.

Contact Pharo Cattle Company® prior to the sale for specific delivery instructions for your location. If you plan to take advantage of our bull delivery service, you **must** notify PCC® **before** the sale or when you clerk out **at** the sale as to which delivery point you want to use. If you don't, your bull will miss his ride and you will have to come get him. Delivery is scheduled to begin the day after the sale. We will call you when we have your transportation lined up.

To address liability issues, we require that our **Basic 30-Day Warranty** be purchased on all bulls being transported to these delivery points. The cost of this coverage is 2% of the purchase price. See page 10 for more details.

Colorado Bull Sale

**Monday, April 20, 2026
1:00 PM (Mountain Time)
46277 US Hwy 24
Burlington, Colorado**

We have cataloged **197** bulls for our Colorado Bull Sale. All of these bulls are yearlings that were developed on hay at PCC® Headquarters with a moderate amount of non-starch supplement (mostly soy hulls). We want these bulls to be big enough to go to work — but we do not want them to be excessively fat. We expect them to gain weight during their first breeding season. At the top of each page it will say which breed is cataloged on that particular page. Bulls will sell in lot order.

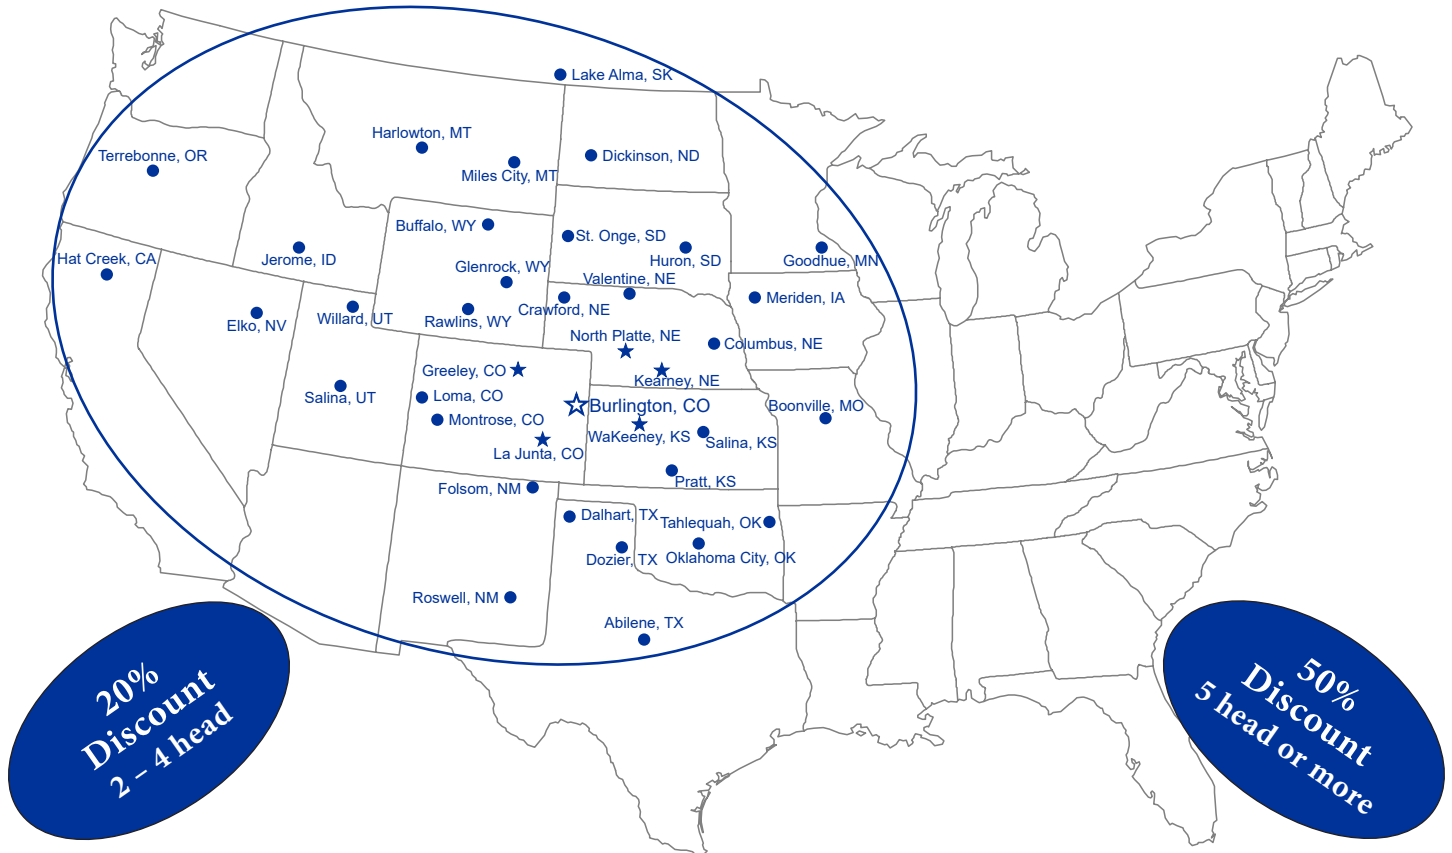

**148 Angus 33 Red Angus 4 Crossbred
7 Black-Hided Red Angus 5 Composite**

Colorado Bull Delivery . . .

We are offering 5 FREE Delivery Points and 32 very Afforda-BULL Delivery Points from our Colorado Sale. Contact Pharo Cattle Company® prior to the sale for specific delivery instructions for your location. If you plan to take advantage of our bull delivery service, you **must** notify PCC® **before** the sale or when you clerk out **at** the sale as to which delivery point you want to use. If you don't, your bull will miss his ride and you will have to come get him. Delivery is scheduled to begin the day after the sale. We will call you when we have your transportation lined up.

To address liability issues, we require that our **Basic 30-Day Warranty** be purchased on all bulls being transported to these delivery points. The cost of this coverage is 2% of the purchase price. See page 10 for more details.

Why Don't All Seedstock Producers...

- Treat their cows tougher than you treat your cows?
- Refuse to make an excuse for a cow, or give her a second chance?
- Focus on pounds per acre (profit) — instead of pounds per cow (bragging rights)?
- Develop bulls on forage — with nothing but starch-free supplements?
- Evaluate and score bulls for disposition?
- Evaluate and score bulls for hair coat and fly resistance?
- Evaluate and score bulls for foot and leg conformation?
- Evaluate and score bulls for preputial prolapse problems?
- Evaluate and score bulls for fleshing ability, thickness, muscling and masculinity?
- Evaluate and score bulls for grass efficiency, cow longevity and maintenance?
- Provide an udder score for the bulls they sell?
- Provide a One-Year Guarantee on all of the bulls they sell?
- Guarantee bulls for calving ease?
- Guarantee bulls to be free from genetic defects?
- Provide ultrasound data on the bulls they sell for carcass traits?
- DNA test bulls for A2 Beta Casein and Tenet®?
- Obtain a DNA profile on every bull they sell to increase accuracy of predictions?
- Control flies and other parasites with genetics — instead of toxic chemicals?
- Produce genetic strains that are adapted to heat, humidity and/or fescue?
- Invite customers to participate in bull evaluation days?
- Provide a Quick Sort program that takes the guesswork out of selecting bulls?
- Use an honest, low-pressure Cowboy Auction to sell bulls?
- Deliver bulls to over 60 delivery points across the nation?
- Provide an online discussion group with world-renowned industry experts?

Ultrasound Data Explained . . .

Masculinity, Nutrition — and Marbling

By Allen R. Williams, Ph.D.

For over a decade there has been confusion among cattlemen regarding the results of live animal carcass ultrasound and how to interpret data collected between seedstock producers. In no trait is this confusion more notable than with % IMF (intramuscular fat). This particular trait measurement is heavily impacted by several factors, including bull masculinity, degree of nutrition and bull activity (related to masculinity). These factors can greatly impact the degree to which IMF is expressed — although they do not, in any way, change the genetic potential.

Bull Masculinity and Activity

Bull masculinity and degree of testicular development clearly impact the expression and ultrasonic measurement of IMF. It is important to remember that the male sex hormone testosterone is a potent IMF inhibitor. In over a decade of collecting ultrasound IMF measurements on yearling to long yearling bulls, it has become very apparent that the level of masculinity and testicular development plays a significant role in the magnitude of the ultrasound IMF measurements. In other words, bulls that are thick-muscled, exhibiting signs of heavy development of secondary sex characteristics (crest to the neck, heavy shoulders, etc.) and have good to excellent testicular development will have IMF measurements that are biased downwards due to the inhibitory effect of testosterone. Statistical analysis of IMF data, coupled with scrotal circumference data, clearly indicates a significant negative correlation between bull masculinity and actual IMF. What this means is that in many instances (not all), bulls that have a very high ultrasound IMF are often not very masculine bulls. The lower testosterone activity in these bulls allows for greater phenotypic expression of IMF, but does not give a true picture of the IMF genetic potential as compared to the very masculine bulls.

Bull Nutrition

Level of nutrition leading up to the yearling stage greatly impacts expression of IMF. It has long been known that bulls developed on high concentrate rations will exhibit a higher magnitude of IMF deposition, at the same age, than bulls developed on lower concentrate or forage rations. That is one of the reasons most seedstock operations develop bulls on 50% or greater concentrate rations. The bulls gain quite a bit of condition (backfat) and lay down a higher level of intramuscular fat. Fat, slick bulls appeal to a lot of bull buyers. The problem is, you often don't know what you are really buying because fat covers over a lot of faults and can give a very false impression of actual fleshing ability. Bull buyers also like to see high ultrasound IMF scores. Again, this can lead to misinterpretation by mistaking IMF due to high concentrate feeding with actual genetic potential for IMF. Bulls can only lay down IMF to the degree to which their nutritional environment will allow. Therefore, just as with bull masculinity and activity, it is important to compare bulls within contemporary groups only and not from ranch to ranch.

PCC® Bulls

In the case of the PCC bulls, it is evident that many of these bulls are thick, heavily-developed bulls that exhibit a high degree of masculinity at 12-18 months of age. This masculinity, in and of itself, will inhibit phenotypic expression of IMF. Couple masculinity with high levels of activity — and then consider the fact that these bulls have not been fed a high-concentrate ration. Therefore, it is important that these bulls be compared for their genetic potential for IMF — not for the magnitude of their actual IMF measurements.

I have analyzed actual carcass data from progeny produced from many of the prominent bloodlines utilized within PCC seedstock, and the results clearly show that there is true genetic potential for marbling or IMF. The majority of the progeny sired by these genetics will produce grass-fed and grain-fed cattle that grade USDA low Choice or better at harvest.

Ultrasound Data Explained . . .

The live animal carcass ultrasound used by Dr. Allen Williams and his associates is an automated, chute-side software system that captures images and calculates trait measurements on an objective basis. The traits determined by this ultrasound software are:

- **Back Fat Thickness**
- **Ribeye Shape Score**
- **Ribeye Area (REA)**
- **Ribeye Area/Hundred Weight (REA/CWT)**
- **Percent Intramuscular Fat Ratio (% IMF RATIO)**
- **Tenderness Score**

On this and the following several pages, we have posted these measurements and scores for all of the bulls in this sale — by sale and lot number.

Ribeye Shape Score: This score is indicative of the desired shape of the ribeye muscle. It is correlated to gain efficiency, as well as to eventual yield grade, cutability, and % retail product. The score ranges from 0.0 to 1.0, with an acceptable score being 0.35 or greater.

Tenderness Score: This score is correlated to the actual Warner-Bratzler Shear Force in a carcass ribeye steak at the 12th rib location. This score ranges from 10-50, with 20 being very tender, 30 being slightly tender, 40 being slightly tough, and 50 being tough. An ideal score is 25 or less, but 29 or less is considered acceptable in bulls.

Back Fat and **Intramuscular Fat** are affected by environment and feed consumption. The fact that these bulls were being run in different groups is somewhat evident by the amount of variation that exists for fat thickness and marbling. With this in mind, our ultrasound technician shaded in the scores and measurements that he would consider to be “top-sort”. Those shaded blue are considered the best scores, and those shaded tan are the next best. For more help in using this information, feel free to call Clay Nash at 870-897-3167.

Cowboy Logic: "For every person climbing the ladder of success, there are ten waiting for the elevator."

Getting Your Money's Worth...

With cattle prices at record-high levels, bulls are selling for record-high prices. Cost is always a factor when buying bulls — but it should not be the only factor. First and foremost, you should consider the program behind the bulls. Bulls that are produced in a program that aligns with your long-term goals are worth a whole lot more than bulls coming out of a program that does not align with your long-term goals.

Another very important factor in getting your money's worth is the number of calves a bull will sire before he must be replaced. It doesn't take a rocket scientist to figure out that a bull that sires twice as many calves as an average bull is worth twice as much as the average bull. After all, the reason you purchase bulls is to sire calves.

According to many university experts, you can only expect to get three years of use out of a high-maintenance, grain-fed Diesel Bull. On average, I think that is too high. Even with supplementation, most Diesel Bulls can service no more than 20 cows their first year and no more than 30 cows their second and third years – for a lifetime total of 80 calves.

It is not at all uncommon for our low-maintenance, forage-developed Solar Bulls to provide at least six years of service. We are not afraid to turn our Solar Bulls out with 30-plus females their first breeding season. We expect our bulls to gain weight during their first breeding season without being supplemented. Our older bulls can handle 50-plus cows – for a lifetime total of at least 280 calves.

In this case... the low-input, forage-developed PCC® Solar Bull sired 200 more calves than the status quo Diesel Bull. If the Diesel Bull cost \$8,000, his cost per calf would be \$100. At \$100 per calf, you could have paid as much as \$28,000 for the PCC Solar Bull and still be getting your money's worth. Since our forage-developed Solar Bulls cost about the same as grain-fed Diesel Bulls, you will always get MORE THAN YOUR MONEY'S WORTH with a PCC® Solar Bull!

Cowboy Logic: "Real cowboys don't take baths. They just dust off."

Cooperative Producers

Pharo Cattle Company® is much more than one family and one ranch. In reality, we could be described as a multi-family owned and operated seedstock producer.

The demand for Pharo Cattle Company bulls has increased tremendously over the past several years. In order to meet this demand and to keep our prices affordable, we thought it necessary to increase the number of bulls offered in our annual bull sales. This task is not as easy as it sounds because we refuse to sacrifice quality for quantity!

The Solution. Over the years, our seedstock program has evolved into a network of

outstanding cooperative producers. We've been able to increase our numbers, without sacrificing quality, by selecting the best bull calves from several select cooperator herds. I'm referring to producers who have philosophies, genetics, and breeding programs very similar to our own. For the most part, these are breeders we have been working very closely with for several years.

Biographies for all of our cooperative producers can be found on the next few pages. These producers have signed a contract with Pharo Cattle Company. In so doing, they have agreed to abide by some strict guidelines, including the following philosophies.

Philosophies Behind Our Bulls

1. **Honesty and integrity will never be compromised.**
2. **We will manage the natural resources placed under our control in a sustainable manner.**
3. **The breed of cattle is not nearly as important as the breeding program and the philosophies that produce the cattle.**
4. **Cows are run in a real-world environment, as tough or tougher than the environment most commercial cows are run in.**
5. **We let the environment sort out the good ones, while we show absolutely no sympathy for open, late, or dry cows.**
6. **We will never make an excuse for a cow. A cow must produce and wean a calf every year to remain in the herd.**
7. **By limiting feed resources, we try to apply sufficient pressure on the cowherd to force out the unadapted and infertile animals — at least 10 percent each year.**
8. **In addition to growth and performance, we select for some other vital economic traits like fertility, calving ease, moderate cow size, fleshing ability, structural correctness, disposition, and longevity.**
9. **Replacement heifers are developed on a low-cost, forage-based diet with minimum supplements. We only want the most efficient and most adapted heifers to make it into the cowherd.**
10. **A bull calf must be born unassisted from an efficient, moderate-sized cow that has never missed in order to make it into one of our bull sales.**

Bull Selection. When we go into these cooperative herds, we are extremely selective. Performance is important, but we also select for calving ease, structural correctness, disposition, fleshing ability and thickness. In addition to all this, we require that the bulls' mothers be

efficient, moderate-sized cows that have never been pampered. We can't afford to make any mistakes because our reputation is at stake. We only want the best of the best! As time goes on, and as these herds improve we have been able to select more and more of their bulls for our program.

Meet The Breeders

2DT — Twodot Land and Livestock

Twodot Land and Livestock has been a family operation since 1908. Now led by Zach, the fifth generation, the ranch thrives with a dedicated and talented team. Managed holistically since the mid-1980s, Twodot has cultivated ecological resilience, operational flexibility, and cattle well adapted to their unique environment. Our culture is centered around low-input, nature-based livestock production. Twodot is proud to be both a Cooperative Producer and PCC's Montana forage bull developer. We welcome visitors and look forward to hearing from you. Zach Jones, phone (406) 431-3147 or email zjones.tdll@gmail.com.

4-P — 4-P Farms

Rod grew up as a farm boy in Eastern Colorado and always envisioned a future in farming. After marrying the girl next door — Kit's sister, Kathy — he was introduced to the philosophies of Pharo Cattle Company®. Together, Rod and Kathy run a small herd of registered Angus, keeping only the “best of the best” — cows that know how to work for a living. In addition to ranching, Rod serves as a Colorado State Senator, while Kathy manages bull data for PCC®. Rod and Kathy Pelton, phone (719) 342-1864 or email rodpelton@rebeltec.net.

4-T — 4-T Cattle Company

4-T Cattle Co. was founded in 2005 when Kelly sought to expose Reid & Anna to a lifestyle beyond the Overland Park suburbs. In 2011, we bought our first PCC® bull, marking a shift in our operation from traditional methods to the Herd Quitter® mindset. Our self-sufficient Hereford herd requires minimal inputs and produces moderately-framed, slick-coated, and easy-fleshing cattle. We're grateful for our connection with Pharo Cattle Company® and the cooperative producers from whom we continue to learn. Kelly, Mandy, Reid, and Anna Thomas, phone (913) 915-3126 (Kelly) or (913) 687-5281 (Reid) or email mandyt85@gmail.com.

5PF — 5P Farms

5P Farms, owned and operated by Rob and Donna Pierce, is located in Tahlequah, Oklahoma. Struggling to make a profit with our cattle, we purchased PCC® bulls in Fall 2012 — and it has truly “Made Ranching Great Again” for us! Now, our goal is to help others do the same. We are blessed to be cooperative producers for PCC, with a herd consisting of Heat-Tolerant Composites and Red Angus. We welcome you to call us anytime! Rob and Donna Pierce, phone (918) 316-7740 or email believersarenaministry@gmail.com.

Meet The Breeders

83R — 1883 Ranch

1883 Ranch was founded in 2019, but our roots run much deeper. Rufus Seth Reed Munger homesteaded in Keya Paha County, NE, in 1883. Today, the ranch is owned and operated by Brian & Jill Munger (5th generation), with strong involvement from the 6th generation — Ethan, Kylin, Colton, Keely, Kortney, and Shane. With such deep roots, we are in this for the long haul. If you find yourself roaming the Nebraska Sandhills, stop by for a cold glass of tea or a hot cup of coffee! Brian & Jill Munger, phone (402) 497-3607 (home), or (402) 382-8814 (Brian cell), or email bjmunger@threeriver.net.

BSR — Bar S Ranch

The Bar S Ranch, owned by Riley and Kelsey Shay, is located near Edson, Kansas. Riley grew up involved with PCC® through his parents' ranch, where they raised Black Angus cattle. In 2013, we purchased our first Red Angus cows and have been dedicated to producing low-input, moderate-framed cattle with calving ease and fleshing ability ever since. We're proud to work with Pharo Cattle Company®. Feel free to contact us — we would be happy to visit with you! Riley and Kelsey Shay, phone (785) 694-2910 (home), (785) 694-8300 (cell), website the-sranch.com or email mail@the-sranch.com.

CTM — McDaniel Ranch

I've been raising Red Angus cattle since 1997 and became a CP for Pharo Cattle Company® in 2002. Since then, I've transitioned from no-fun, high-maintenance, hard-calving cattle to a low-maintenance, easy-calving herd. In 2017, I added Black Angus cows with the same focus on fertility, self-sufficiency, and easy-fleshing — traits consistently passed on to their calves. Producing low-input, easy-calving cattle is both practical and enjoyable. Our greatest asset is the opportunity to work with PCC® and like-minded producers I'm proud to be associated with. Cody McDaniel, phone (785) 694-3244 (cell) or email mcdanielcattle@gmail.com.

DC — Dry Creek Farms

Dry Creek Farms, located near Goodhue, Minnesota, is owned and operated by two generations of Luhmans. Jon and Terri, along with Jared and Valerie, make up the Dry Creek team that is dedicated to improving the land that God has entrusted to us. We breed cattle that thrive in our natural environment and take full advantage of our forage-only program. We're grateful to be able to work with PCC® in producing low-maintenance, profit-making seedstock and welcome you to visit anytime. Contact Jon (651) 380-9635 (cell) or jdluhman@hotmail.com or Jared (507) 271-5968 (cell) or jared.luhman@gmail.com.

Meet The Breeders

D-J — David Johnson

Our family raises low-input Angus cows in southern Missouri's fescue country, selecting traits that thrive in our heat and humidity. Improving our grazing resources is a priority, with a focus on animal health, soil health and forage diversity. We prioritize genetics suited to our environment, believing that if cattle perform well here, they can thrive almost anywhere. We're grateful to work with PCC® as we approach another decade of challenges and innovation. David Johnson and family (573) 247-0164 (cell) or (573) 729-4388 (home) or email dbjodc@gmail.com.

DTR — Double Tree Ranch

Proudly operated by the fourth generation of our family, Double Tree Ranch was revitalized from scratch in 2022. We utilize high-density, non-selective total grazing, intensively rotating cattle across pastures, followed by extended rest periods. In winter, we graze stockpiled forage and supplement with hay only as needed. This system produces hardy, fertile cattle with exceptional dispositions and low-maintenance needs, all while improving soil health. The bulls you'll find here are proven performers ready to elevate your herd's fertility, efficiency, and resilience, just as they've transformed ours. Gavin and Caitlynn Kemp, phone (308) 215-0613 or gjjkemp@yahoo.com.

FSR — Flying S Ranch

Diane and I have managed a low-input Angus herd since 1994, proudly continuing my father's tradition of raising only the best cattle and horses. Our cows calve on Republican River bottom grass in March and April with minimal harvested forage. They graze native grass through summer and fall and winter on corn stalks. Give us a call or stop by anytime — we would love to visit. Ryan and Diane Shay, phone (785) 332-3209 (home) or (785) 332-5588 (cell) or email ryan@flyingsranch.com.

GMJ — GMJ Cattle Farm

Our program was founded by the patriarch of our family, Glendon Spigner, and carried forward by Jason and Margaret Spigner after his passing. Since 1990, we have focused on registered Angus, producing medium-framed, low-maintenance cattle that thrive in Mississippi's brutally hot and humid summers. We are proud to be Pharo Cattle Company® Cooperative Producers and look forward to continuing in this role for years to come. Jason Spigner, (662) 255-7937 (cell) or j.s.spigner@gmail.com.

Meet The Breeders

JPB — Bailey Farms

Bailey Farms, established in 2012, dates back to the late 1800s. With our four children, we raise cattle, broiler chickens, freezer pork, and hay, focusing on proper grazing and selecting animals suited to our environment. Our herd resembled PCC® cattle even before discovering PCC genetics. With strict culling for fertility, our cattle naturally became moderate-framed and easy-fleshing, so adding PCC bulls made perfect sense. Our cattle graze mostly fescue pastures and are expected to breed back and raise a calf each year. We are proud PCC cooperators. James Paul and Emily Bailey, phone (256) 484-7474, email GilbertFarm2016@gmail.com.

LCC — Lost Creek Cattle

Lost Creek Cattle Company is a first-generation, veteran-owned ranch founded in 2010. Sean and Kat, with their four kids, run commercial and registered cows together on native and tame pastures in southwest North Dakota. Our registered cows get no special treatment and are expected to perform alongside the commercial herd. Our bulls are developed to improve commercial operations by producing easy-fleshing, low-maintenance off-spring that thrive on forage. Sean and Kat Weinert, phone (701) 567-6635, email lostcreekcattle@hotmail.com, Instagram @lostcreekcattle or website lostcreekcattleco.com.

LPC — Lazy P Cattle Company

We're Steven and Maradee Peterson, third-generation farmers and ranchers from Richfield, Utah. Our family of 5 kids, 3 "married-in" kids, and 3 grandkids keep life full and lively. We're passionate about passing our love of cattle and agriculture to the next generation, with Steven serving as an FFA Advisor and Ag teacher. Our goal is to continue raising high-altitude, low-maintenance, moderate-framed Angus bulls. Working alongside forward-thinking people in the PCC network, who are dedicated to helping their customers succeed, has been an incredible experience. Steve and Maradee Peterson, phone (435) 201-9708, email Steven.peterson@seviersd.org.

MPV — Volkmann Cattle Company

Volkmann Cattle Company, located in the heart of Missouri's fescue country near Columbia, focuses on developing highly adaptive seedstock for profitability and sustainability. In over three decades of breeding, we've developed fescue-adapted production females that excel in various management systems, giving your operation a competitive edge. In 2022, we acquired PCC® Red Angus seedstock from the D-7 Ranch. We are excited about our relationship with PCC and look forward to providing low-maintenance, easy-fleshing, Red Angus genetics for years to come. Matt and Paula Volkmann, phone (573) 228-0881 or volkmannmp@gmail.com.

Meet The Breeders

N-K — N-K Angus

At N-K Angus, a mix of prairie, creeks, and timber creates an ideal environment for our cow-calf operation. We take a holistic approach to raising all species of livestock, utilizing rotational grazing on cool-season and fescue grasses. Pharo Cattle Company® genetics, smart grass management, and calving in sync with nature mean more profit — and more fun! To us, being part of the PCC® network is a great privilege. Linda, Paul and Christina Wertemberger, phone (785) 285-8102 (Linda), (785) 623-7513 (Paul) or email nbarkranch@gmail.com.

OAR — Orton Angus Ranch

Orton Angus Ranch is owned by Jason and Chana Orton, with our daughter, Caitlin, and son, Raden, playing important roles in the operation. We purchased our first registered cows from Bruns Angus in 2017. Located in north central Nebraska, just north of the Niobrara River on the edge of the Sandhills, the ranch calves in May and June, utilizing rotational grazing through summer and fall. Our cattle primarily graze sub-irrigated meadows, with some bale grazing in the winter. Jason and Chana Orton, phone (402) 244-5264 or email chanaorton@gmail.com.

OH — Ozark Hills Genetics

The relentless pursuit of FERTILITY, PERFORMANCE, and LONGEVITY — words we live by at Ozark Hills Genetics. A cow MUST calve every year, raise a good calf, and do this for 10+ years. If she doesn't, she gets fired. Simple! We call it Maternal Excellence. Our Red Angus calve in the fall, and our South Polls calve in late spring — on grass, with minimal inputs. We are proud of our cattle! Call us or come see them anytime. Proud PCC® Producers for over 25 years. David and Dana Hall, phone (417) 293-1072 or email david@ozarkhillsgenetics.com.

PAR — Pulliam Angus Ranch

Pulliam Angus Ranch is located in the high country near Montrose, Colorado. Robert and Gina spent 17 years managing a 13,000-acre mountain ranch, where we transitioned to PCC® genetics. PCC bulls changed everything for us, producing moderate-framed, low-maintenance, fertile, and calving-ease cattle — just as promised. Today, we manage our own herd of registered Angus alongside our sons, Nathan and Jason, and his wife, Rachel. We're excited about the PCC program and are proud to provide high-altitude, PAP-tested bulls for fellow producers. Give us a call or come for a visit. We love to talk about PCC! Phone (970) 258-8704 or email robert@pharocattle.com.

Meet The Breeders

PCC — Pharo Ranch Company

The “PCC” prefix (by itself) is used to identify bulls produced by cows owned by Kit and Deanna or Tyson and Becky Pharo. Some of these cows are located at PCC® Headquarters in Colorado, while others are located in Cooperator Herds around the country. You will see the PCC prefix on Angus, Red Angus, Composite and Hereford bulls. If you are passing through, we would love to give you a tour of our ranch and cattle. Contact Kit at (800) 311-0995 (office) or Kit@PharoCattle.com, or contact Tyson at (719) 343-5039 or Tyson@PharoCattle.com.

P-L — Landrigan Livestock

Landrigan Livestock has been using PCC® bulls since 2001 to produce cows that exhibit fertility while foraging for a living. It's been a simple process: we retain nearly all the heifer calves annually, expose them to bulls for a 45-day breeding period, and let the good Lord decide which ones will become cows for us! This has resulted in a moderate-framed cowherd with high fertility, easy fleshing, calving ease, good udders, and longevity. The bulls sold in the PCC sales will produce cows that will do the same. Feel free to reach out anytime with questions or to arrange a tour. Paul & Janet Landrigan, (308) 870-2411 or pjlandrigan@gmail.com.

R2R — R² Ranch

Past experience has shown me that some animals can thrive on the land we have, while others need a feed bag. Multiple droughts have allowed us to cull down to a core herd of low-maintenance, highly fertile cows. We have both a direction and a destination for our herd, guided by the Pharo Cattle Company® philosophies. We feel blessed by the opportunity to work with PCC® and the other Cooperative Producers. Richard Luciano (512) 484-5522 or Sara Toussaint-Mesa (830) 481-4043 or email Richard@R2Ranch.com.

RLC — Redeemed Land and Cattle

Redeemed Land and Cattle is located in the Texas Hill Country near the small community of Luckenbach (the same one Waylon and Willie made famous). Starting out in 2017 with PCC® Red Angus heifers and looking to buy a PCC Red Angus bull, the Lord intervened and we ended up getting a PCC heat tolerant bull. That turned out to be a great benefit to our herd. Improving the land has always been a priority for our operation. With a mixture of good PCC genetics and adaptive grazing practices, our cattle perform better and so does the land. Garrett and Bethany Kunz, phone (830) 456-6051 or email g.kunz@me.com.

Meet The Breeders

RRG — Rocking 3R Ranch

My wife, Billie, and I, along with our three kids, live near Hillsboro, Texas. We utilize management-intensive grazing practices and PCC® genetics to improve soil health and maximize productivity on our land here in central Texas. Working with Pharo Cattle Company® and its group of progressive thinkers has been a true pleasure. While we operate primarily on leased ground, we would love the opportunity to show you around. Ian Gerrish, phone (903) 590-6841 or email ianjg00@hotmail.com.

RSR — Rocking S Ranch

Rocking S Ranch, owned and operated by Nathan and Cheyanne Stevenson, is located near Brewster, Kansas. Our goal is to raise a low-maintenance, grass-efficient herd with fleshing ability and calving ease — cattle that not only survive but thrive without supplements. Our cowherd grazes native Kansas grasslands through summer and fall, then winters on a mix of cover crops, stalks, grassland, and stockpiled forages. Feel free to contact us anytime — we'd love to visit with you. Nathan Stevenson, phone (785) 953-7163 or email nathan@rockingsranch.org.

SCC — Shirah Cattle Company

Shirah Cattle Company, owned and operated by Brandon and Christa Shirah and family, is located in the extreme heat and humidity of Southeast Alabama. Founded in 2013 with nothing but a dream and faith in God, we have used PCC® genetics from the start. Our goal is to raise fertile, good-uddered, sound-footed, docile, and easy-fleshing cattle that breed into their teens on nothing but grass and mineral — the kind of cattle that are truly profitable. We raise Red and Black Angus, as well as Heat-Tolerant Composites, and are grateful to be part of PCC®. Brandon and Christa Shirah, phone (334) 701-4659 or email brandons@shirahcattleco.com.

SSCC — Seven Spades Cattle Company

Our cattle venture began in 1987 with 15 cows, purchased using all our savings and a low-interest ag loan. After several years of breeding conventional cattle with disappointing results, Dave had several conversations with Kit Pharo — discussions that opened the door to the genetics we needed for success. If you're ever in our area, give us a call. We'd love to talk cattle and show you around! Dave and Donna Gwyn, phone (719) 348-5437 or email sevenspadescattle@gmail.com.

Meet The Breeders

T&T — T & T Cattle Company

T & T Cattle focuses on grass-based genetics that are moderate, fertile, functional, and efficient. Our low-input cattle thrive on grass with minimal supplementation. We emphasize "moderation in all things" and avoid chasing extremes. Our cattle have excellent fleshing ability, an attractive phenotype, and perform well at high elevations. While we primarily run registered Red Angus, we also incorporate Angus, SimAngus, and Hereford genetics. Bobby and Erica Thoman, phone (307) 850-2129, lostwellscattle.com or email rthoman@wyoming.com.

TCH — Turner Creek Herd

When working with cattle, I like to remember my dad's wisdom: "You know, son, the easiest way to get a cow to do what you want is to let her think it was her idea," and "If you can figure out what a cow is thinking, it will make this a lot easier." Another important philosophy I agree with comes from Pharo Cattle Company®: "Raising cattle should be enjoyable and profitable." Eddy and Perri McMurtry, phone (806) 256-2979 or email eddy@turnercreekherd.com.

TF — Toby Foland

I live in Wheatland, Wyoming, where I maintain a herd of efficient, moderate-framed Angus and Composite cows. For many years, I have bred my cows to Angus, Tarentaise, and Composite bulls from Pharo Cattle Company®, carefully selecting genetics that align with my operation's goals. My focus is on producing efficient, easy-fleshing, and good-natured cattle that optimize hybrid vigor and profitability. Calving in May and June has significantly reduced my input costs, simplified management, and shortened my calving season. Toby Foland, phone (307) 331-1453 or email tjfoland68@gmail.com.

WCC — Walker Cattle Company

Located in the Ozark Mountains of Missouri, Walker Cattle Company continues a family tradition of over 300 years of cattle production across the South. With PCC® since 2006, we focus on producing cattle that are well-adapted to thrive in temperature extremes, high humidity, and endophyte-infected fescue. Through rigorous selection and a commitment to low-input management, we produce cattle that excel anywhere, all while remaining efficient and profitable. Our program specializes in Bos Taurus Heat-Tolerant Composites, utilizing Red Angus, Mashona, and Romosinuano genetics. Tours and phone calls welcome, phone (417) 777-0599 or email WalkerRedCattle@gmail.com.

The Cow of the Future

The size and type of cow that most cow-calf producers have today didn't come about by happen-chance. Today's status quo cow is the result of a time when land was unbelievably cheap, at least by today's standards. She is also a result of cheap feed and cheap fuel. I can remember buying gasoline for only 25 cents per gallon at the local Gas-O-Mat in 1970. Labor was cheap, and equipment was cheap. Today's status quo cow made sense 50 years ago. Unfortunately, that era is over — and it ain't coming back.

You and I know nothing stays the same. The present is different from the past — and the future will be different from the present. Today's status quo cow was created to fit the past, when land and inputs were very cheap. She no longer fits the needs of today's cow-calf producer. Her maintenance requirements are much too high. She is too big and requires too much land and fossil fuel-based inputs. She has what I like to refer to as “diesel” genetics. As the cost of inputs continue to increase, she will quickly become less and less profitable.

There are a few programs, albeit very few, with non-status quo cows — cows that are very efficient and profitable in today's world. These programs have bucked the status quo trend for the last 30 years. They have selected for extremely low-maintenance cows that can do the most for the least. Because these cows require less land and less inputs, they can dramatically increase profit per acre in all environments. These cows have what I like to refer to as “solar” genetics. They were designed to run on *free* solar energy — instead of fossil fuel energy.

So what will the cow of the future look like? That is difficult to say — but we can speculate. With a growing world population, I think the availability of land will continue to decrease, while the cost of land will continue to increase. Cow-calf producers will be forced to adopt management practices that will make the most of every drop of rain and ray of sunshine that falls on the land they control. I also think the cost of inputs will continue to increase. Believe it or not, the cost of producing a calf, at least for status quo producers, has more than doubled in just the last 16 years. I see no reason for this trend to change.

I suspect the cow of the future will look very similar to the cows that we currently have in the Pharo Cattle Company® program. They will be easy-fleshing, grass-efficient, 3 and 4-frame cows with extremely low maintenance requirements. They will require substantially less land per cow. They will require very little in the way of hay and supplemental feed. They will require very little in the way of other inputs — including vaccines, antibiotics, pesticides, wormers, etc. They will require very little labor. Compared to today's status quo cows, these low-input, solar cows of the future will increase profit per acre by over 50 percent.

10-year-old, low-maintenance, 3 to 4-frame PCC® cows stay this fat even during a severe drought — 30 days post calving

Sooner or later... *all* cow-calf producers will be forced to produce easy-fleshing, grass-efficient cows with extremely low maintenance requirements — *or* they will be forced out of business. Why not get a head start on everyone else? Those who are the quickest to adapt and change will be in the driver's seat — while those who are the slowest to adapt and change will get left behind or run over. High-maintenance cattle will eventually go the way of the dinosaurs.

I am not ashamed of the gospel, because it is the power of God for the salvation of everyone who believes.

Romans 1:16

Cowboy's Prayer

By Badger Clark

Oh Lord, I've never lived where churches grow.
I love creation better as it stood
That day You finished it so long ago
And looked upon your work and called it good.

I know that others find you in the light
That's sifted down through tinted window panes,
And yet I seem to feel You near tonight
In this dim, quiet starlight on the plains.

I thank you, Lord, that I am placed so well,
That you have made my freedom so complete;
That I'm no slave of whistle, clock or bell,
Nor weak-eyed prisoner of wall and street.

Just let me live my life as I've begun
And give me work that's open to the sky.
Make me a partner of the wind and sun,
And I won't ask a life that's soft or high.

Let me be easy on the man that's down;
Let me be square and generous with all.
I'm careless sometimes Lord, when I'm in town,
But never let 'em say I'm mean or small.

Make me as big and open as the plains,
As honest as the hoss between my knees,
Clean as the wind that blows behind the rains;
Free as a hawk that circles down the breeze.

Forgive me, Lord, if sometimes I forget.
You know about the reasons that are hid.
You understand the things that gall and fret;
You know me better than my mother did.

Just keep an eye on all that's done and said
And right me, sometimes, when I turn aside,
And guide me on the long, dim trail ahead
That stretches upward toward the Great Divide.
