AICHI SCISSORS
PROFESSIONAL

At Aichi, we understand that to be the best, you must meet and exceed all expectations.

Introduction Company information

KOREAN OWNED, KOREAN FACTORY PRODUCED BRAND

Aichi Scissor's, owned by scissor factory "Dain-tech", has been crafting professional cutting shears since 2005.

At Aichi, we understand that to be the best, you must meet and exceed all expectations.

Therefore, we have arranged 4 main attributes that set Aichi apart from other scissors producers.

Many scissors companies claim that their product is, "Made in Japan", or "Japanese scissors", or one of many other fancy classifications. The truth is, in fact most of them are not made in Japan, they are usually produced in other countries and just marked "Made in Japan"

We, on the other hand, do not claim our scissors are made in Japan.

All of our scissors are crafted in our factory, right here in South Korea. Our stringent craftsmanship standards are set to produce unmatched quality in the field of cutting instruments.

All of our engineers have either A: completed rigorous training from masters of the trade with production-line experience in Japanese cutting shears companies or B: have been employed in Japan at a cutting shear workshop

After harnessing the know-how and skill to produce top-notch shears, we were able to combine Korean meticulous assembly procedures + workplace diligence with Japanese-born steel and very proudly print "Made in Korea" on to every single one of our products. In the end, we have accomplished the "holy grail" of making a great product even better with years of R&D and improvements to motion and feel in the hand while using the cutting shear.

We can't wait for you to experience the "Made in Korea" advantage.

Japanese steel Manufacturers

DIRECTLY FROM JAPAN

Genuine Steel

Aichi only uses imported top grade, certified steel, directly from Japanese steel manufacturers.

We often find that many scissor companies claim their scissors are made using “440c”, “vg1”, “vg10”, and “ats-314” steel.

We also find that these same companies fail to provide certification from steel makers to verify their claims.

This tends to be the case as many scissor brands don't actually produce their scissors themselves and have no idea where their steel comes from.

On the other hand, we, Aichi, oversee production from raw material to the finished product.

Aichi CAN provide certification.

Aichi CAN provide verification.

Aichi CAN confirm **100%** that our steel is directly imported from **Japanese steel manufacturers**

such as **TAKEFU** and **HITACHI**, and we are proud to engineer and craft this steel in to cutting edge instruments, here in Korea.

Features: Made by Japanese highest steel

Features: Korean Factory Produced Brand

Unique Tension System

In the center part of our pivot screw, the “Special screw tension system” is applied.

This bearing exists for the operator to more easily open and close the scissor.

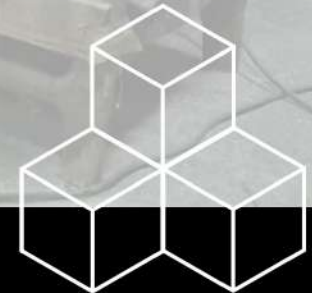

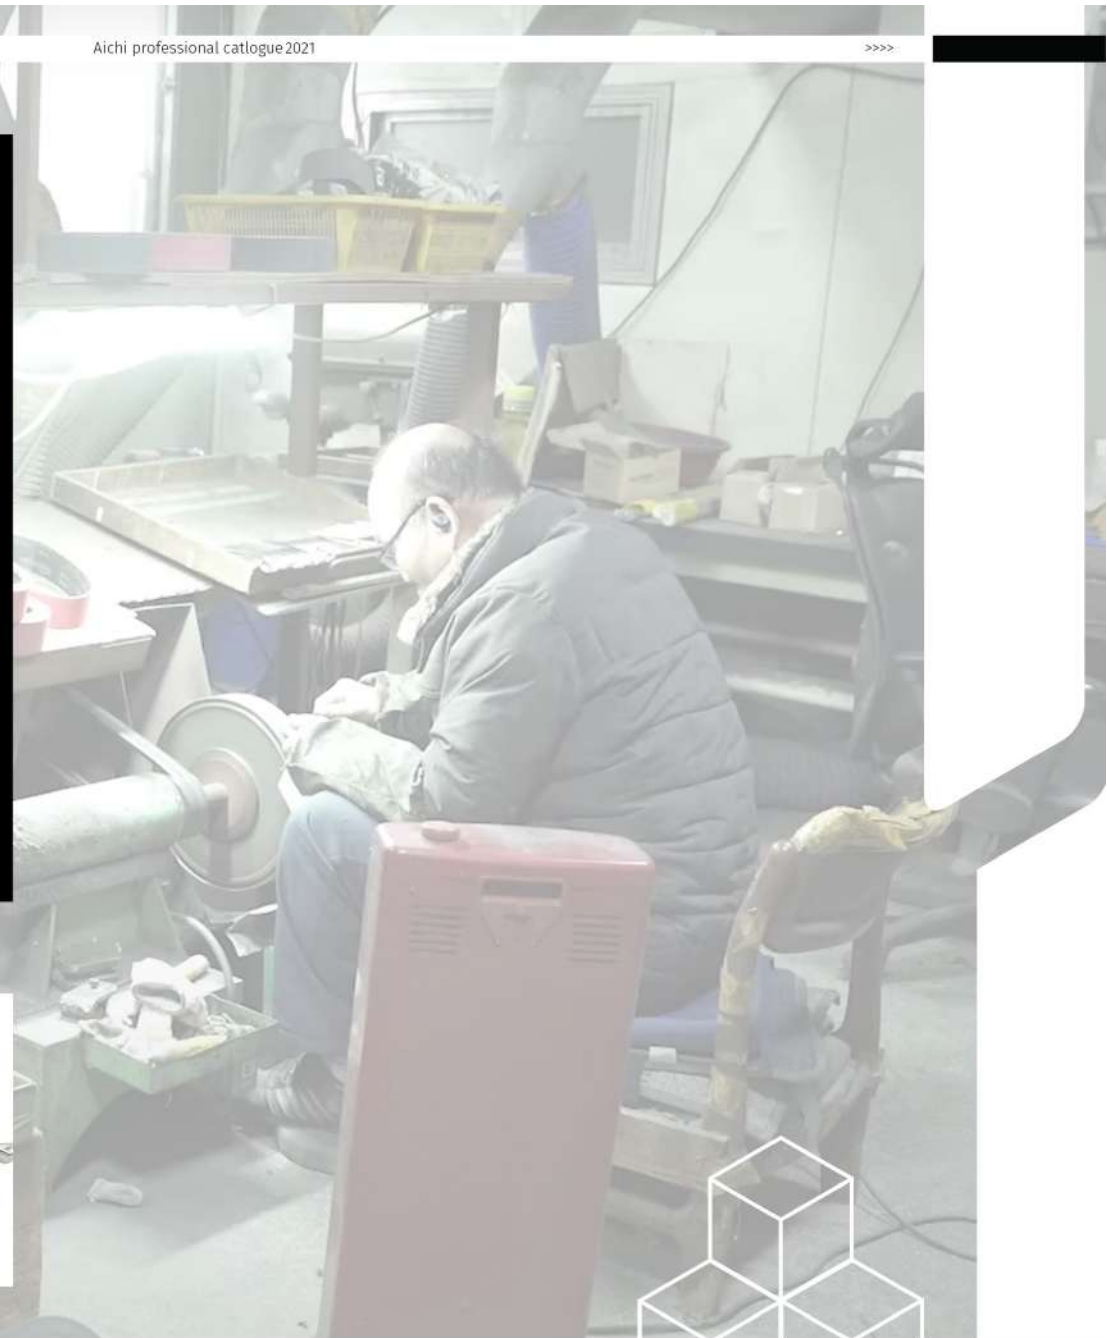

It allows for a 50% less force to be applied compared to a conventional one-blade bearing system.

In addition to the ease of use, this unique system doesn't leave any hair inside the pivot screw.

Additionally, lubricating oil can easily be applied to the bearing and exit out through the crafted opening, automatically.

The scissors will virtually never lock up.

With the combination of reduced friction of blades and Aichi durability, these scissors are designed to last for years to come.

Customization & Authorized A/S Service Center

As we have been exporting to top-tier professionals with specific demands, we know and identify the importance of tailor fitting artists with the tools they require.

As our consumer base grows, our ability to meet the needs of a diverse audience grows as well.

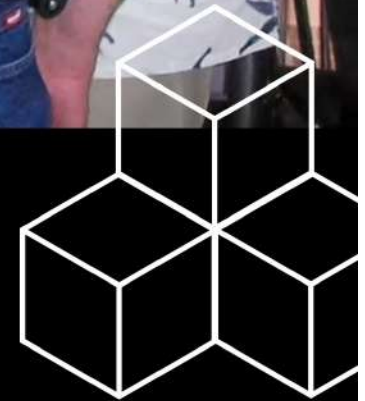

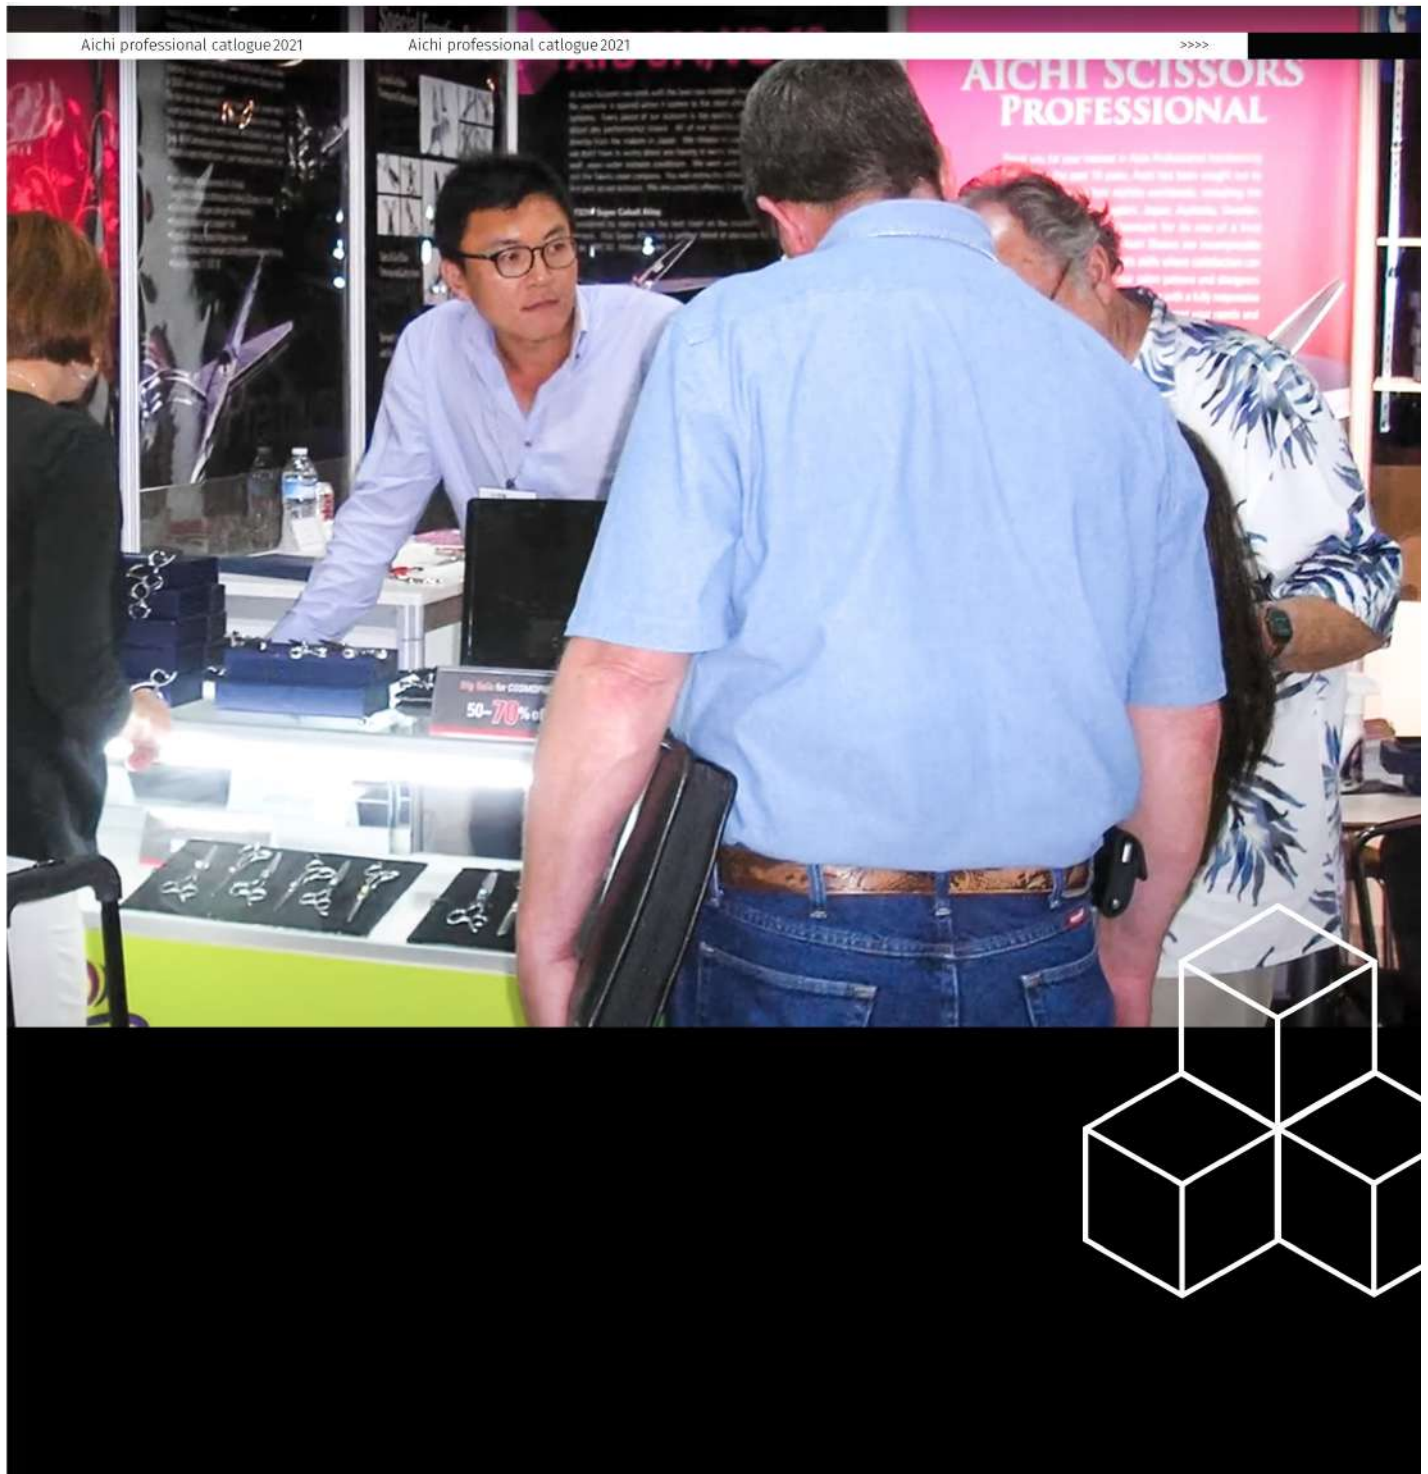

We know we produce a superior product and this is thanks to the feedback we have received over the years. This feedback is not only a call for a better product, but also a tool for development within our company.

We have listened to professionals around the world, and we have delivered the product you have asked for. As we truly believe there is no end-point to improvement, we ask that our clients continue to provide feedback and allow us to continue to provide a product second-to-none.

Every time you use a pair of Aichi shears, you will feel as though they have been customized, exactly to fit your needs. We like to refer to this phenomenon as "collective customization".

Finally, we invite customization requests both cosmetically and functionally. We vow to meet your professional demands!

Aichi are very good high quality shears at a very affordable price.

Iespecially like the one with razor built in to the texturizing shear.

cool design and functional, like cutting butter.

Thank you & Summary

AICHI ELITE COLLECTIONS
FOR SALON DESIGNER
440C JAPANESE STEEL SCISSORS
