A photograph of several cotton bolls and a stem with green leaves, arranged on a light blue background. The cotton bolls are white and fluffy, with some brown seeds visible. The leaves are small and oval-shaped. The word "Cotton" is written in a large, bold, blue font across the center of the image.

Cotton

Many eco-friendly solutions

Cotton shopper bags are practical and versatile accessories; two of the most significant aspects are the sustainability of the material and reusability, which reduces the use of disposable products and thus minimises waste.

Made of natural fibre, these bags are robust and ideal for shopping, work or leisure. Available in different designs and sizes, they can be found in a variety of materials with different sustainable characteristics:

RECYCLED COTTON

Derived from recovered cotton fabrics, it reduces demand for new resources and limits textile waste

ORGANIC COTTON

Grown without the use of pesticides and chemical fertilisers, it has a lower environmental impact than conventional cotton

NATURAL COTTON (undyed)

Preserves its raw colour, reducing the use of chemicals and water in the process of production

Cotton in its variations can give your brand an image of strong responsibility, sensitivity to the theme and quality, conferred by the durability of the articles.

**Recycled
cotton**

New life for fibres

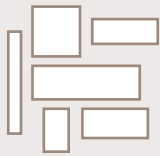

Recycled cotton is an environmentally friendly solution that reduces textile waste and therefore environmental impact.

Made from recovered and reused cotton waste, this material retains the **quality** and **durability** of traditional cotton while requiring **fewer natural resources**. Using recycled cotton helps promote a circular and sustainable economy, reducing the need for new cultivation and limiting textile waste.

On our recycled cotton shopping bags, we have calculated the **% of CO₂ saved** compared to the same product made from virgin cotton.

Production process of a recycled cotton bag

Industrial textile waste or **used cotton clothes are collected** and sorted according to colour and composition.

The **fabrics** are **shredded into cotton fibres** which are then blended with recycled polyester.

The processed fibres are transformed into **new yarns**.

Fabrics are cut and sewn **to create the shopping bags**.

Why choose recycled cotton

Choosing recycled cotton is a conscious and responsible choice towards a more sustainable future. The environmental, economic and social benefits make recycled cotton a viable and necessary alternative to traditional cotton. Adopting this practice means actively contributing to the conservation of natural resources, the reduction of waste and the promotion of a fairer and more sustainable textile industry.

*Compared to the same article made of virgin cotton

The value of a certified commitment

GRS certification

The Global Recycled Standard (GRS) certification is the most important voluntary international standard for recycled textiles.

This recognition of excellence in the field of sustainability and responsible resource management involves the issuing of a **third-party verified declaration** that guarantees the percentage of recycled material and tracks it at every stage of the supply chain up to the finished product. By guaranteeing a **transparent production process** that complies with stringent **environmental standards**, GRS certifies that the materials used in a product are obtained from recycled sources, thus reducing the negative impact on the environment.

The recycled cotton items in the handle bags collection are **GRS certified**, assuring consumers of a sustainable, high-quality product.

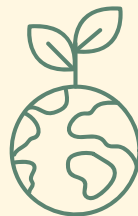

What are its advantages?

Reducing environmental impact

Promotes recycling and the use of recycled materials, reducing dependence on resources such as water and energy.

Responsible social, environmental and chemical practices

It requires restrictions on the use of chemicals and compliance with environmental and social criteria at all stages of the production chain.

Traceability of the production process

Ensures full traceability throughout the production process, ensuring that recycled materials are present in the finished products and have been processed responsibly.

Create unique shoppers with handle bags

Need customised shopping bags that reflect your brand identity? With handle bags, you can create exclusive bags tailored to your needs. Thanks to our experience in the production of high-quality shopping bags, we offer OEM solutions for companies that want to stand out with sustainable, customised solutions.

Carbon neutral

For a greener planet

Carbon Neutral products do not contribute to global warming: total CO₂ and greenhouse gas emissions are zero! To make our products carbon neutral, we have invested in reforestation and renewable energy projects, so that the same amount of carbon dioxide that was emitted during production is removed.

How we made our products Carbon Neutral

1. Calculating the carbon footprint

We have mapped all CO₂ emissions related to the product life cycle:

- Production processes
- Transport
- Use
- Product disposal

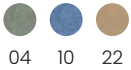

2. Reducing emissions

We use a number of measures to significantly reduce product-related CO₂ emissions:

- Certified recycled materials
- 85% energy from renewable sources
- Plastic-free materials

3. Neutralisation of residual emissions

Non-reducible CO₂ emissions were neutralised through internationally certified offset projects.

Fairtrade® Collection

Organic cotton

Organic cotton bags are the ideal choice for those looking for a natural and environmentally friendly product. Made from cotton grown without pesticides or chemicals, following natural methods that preserve the soil.

Organic cotton is also known for its softness, strength and breathability and has the same quality as conventional cotton.

GOTS Certification

GOTS (Global Organic Textile Standard) certification is one of the most important international standards for the sustainable production of textiles made from natural organic fibres, such as cotton. It guarantees that every stage of the production process, from the harvesting of raw materials to the final garment, respects strict environmental and social criteria.

To be certified, fabrics must contain at least 70 per cent organic fibres and must not be treated with harmful chemicals. In addition, GOTS promotes safe and fair working conditions by prohibiting child labour and ensuring fair wages.

All organic cotton shopper bags in the handle bags line are GOTS certified, guaranteeing maximum environmental sustainability and compliance with ethical standards throughout the production chain.

Cotton

Shoppers for every occasion

Cotton bags are a timeless choice, perfect for those looking for practicality and style in one. Thanks to the natural strength and versatility of this material, they are suitable for many uses. Cotton is a robust material that is soft to the touch and naturally breathable.

Available in various weights and formats, cotton shopping bags are characterised by their ability to be reusable and washable, guaranteeing a long service life.

Ensuring Safety and Sustainability

OEKO-TEX® Standard 100 certification represents a **commitment** to the **quality** and **safety** of textile products, ensuring that they are manufactured without the use of hazardous substances.

The main objective is to ensure that products are safe for direct contact with the skin, reducing health and environmental risks. Products certified with this standard are therefore considered safe and compliant with environmental and safety regulations

All of our cotton bags are **OEKO-TEX® Standard 100 certified**.

Jute

Natural jute shoppers

Jute is a natural fibre known for its strength and versatility, as well as for the speed with which plants grow and renew themselves. These characteristics make it a sustainable and ecological choice. Thanks to its resistant structure, jute can bear considerable loads.

Jute shopping bags combine the practicality of a light and capacious accessory with the natural look typical of this fibre. They stand out for their durability: unlike disposable plastic bags, they are reusable and help reduce environmental impact. Moreover, jute is a biodegradable fibre, which makes it even more environmentally friendly.

Cork

Cork is a natural material obtained from the bark of the cork oak. Its special feature is that the bark can be periodically extracted without damaging the tree, allowing for renewable and environmentally friendly production. In addition to being light and flexible, cork is naturally waterproof and offers excellent thermal insulation.

Furthermore, cork is a biodegradable and recyclable material, contributing to waste reduction and promoting a more sustainable lifestyle.

Bamboo

Natural fibre is obtained from bamboo stems, which are transformed into a resistant and light material.

Bamboo is an ecological resource par excellence; it grows quickly without the need for fertilisers or pesticides. Furthermore, during its growth it absorbs large quantities of carbon dioxide and releases oxygen, thus contributing to improving the quality of the air.

Paper

Paper bags are an ecological and versatile alternative to plastic bags. Made from paper obtained from sustainable sources or recycled materials, these bags are resistant, light and ideal for multiple uses.

From an environmental point of view, paper bags are biodegradable and recyclable, reducing the impact on the ecosystem compared to non-degradable materials.

R-PET

New life for waste materials

R-PET, or Recycled Polyethylene Terephthalate, is a plastic material obtained from recycled plastic bottles and other objects made of PET. Thanks to a recovery and transformation process, R-PET represents a sustainable solution that reduces the environmental impact of plastic, offering a second life to waste materials.

Production process of an R-PET bag

The used plastic bottles **are collected** and selected for recycling. They **are then washed** to remove any residue and impurities.

The clean bottles **are reduced to small fragments** called 'flakes'.

The flakes **are melted** and **transformed into filaments** of recycled polyester. The **filaments** are processed to **create the fabric** used in the production of the bags.

The fabric is **cut out** and **sewn together** to make the final shopping bag.

Why choose R-PET bags

Choosing an R-PET bag means making an informed and sustainable choice for the planet. This type of bag is made from recycled materials, transformed into a useful and durable product. It helps reduce waste and gives new life to materials that would otherwise pollute the environment.

In addition to the ecological aspect, R-PET bags are practical; their long life makes them an economical and ecological choice, eliminating the need to frequently purchase disposable bags.

Non-woven fabric

Non-woven fabric is a light and resistant material made by combining synthetic fibres such as polypropylene without the traditional weaving.

Non-woven bags are a practical and ecological choice, perfect for those who want to combine functionality and respect for the environment. Although not biodegradable, non-woven fabric can be recycled and, if reused several times, represents a more ecological alternative to disposable materials.

Polypropylene

Polypropylene bags are the ideal solution for those looking for a sustainable and durable alternative. Made of resistant materials, such as woven and non-woven polypropylene, they guarantee a long life and a large load capacity.

Polypropylene offers numerous advantages. Thanks to its resistance, these bags are designed to be reused many times, helping to significantly reduce the consumption of disposable bags. Furthermore, it is a recyclable material, which is a more sustainable choice compared to traditional disposable plastics.

Polyester

Polyester is a strong, light and durable synthetic fibre, obtained through chemical processes from polymers. It stands out for its ability to combine strength and practicality. This material is extremely resistant to tearing and wear, making the shoppers suitable for repeated use over time.

Polyester bags are a modern and versatile solution for those looking for a practical and durable accessory. Thanks to the lightness and strength of this material, they are perfect for everyday use and adapt to multiple needs, from shopping to events.

Customization

Customization prices refer to the cost of printing only, one printing passage, one colour with the technique and or the required quantities, excluding fixed cost of film and eventual additional optional packaging costs. Prices exclude VAT.

Printing Technique

Pad Printing

Silkscreen printing

Automatic Silkscreen printing

Sublimation

Laser printing

Digital

Drop of transparent resin with lenticular effect (doming)

For 2 or 3 colours printing on Non Woven, PP, PL it will be necessary to verify the logo ,in order to check the suitability of printing on that specific material: the colours of the logo cannot be added one on the other or in touch each other. For some items, in particular dark-colored textiles and polyester- depending on the logo and for a successful printing - you may need a background in order to avoid color sublimation. In this case there will be price increase.
