FOAM

FOAM SELECTION

Foam is the main material that determines the comfort in an upholstered product.

Lazzoni's design team offers an unmatched comfort to the user with the foams it selects carefully for each product.

HOW DO WE SELECT OUR FOAMS?

DURABLE

Lazzoni foams can stay undeformed for a long time.

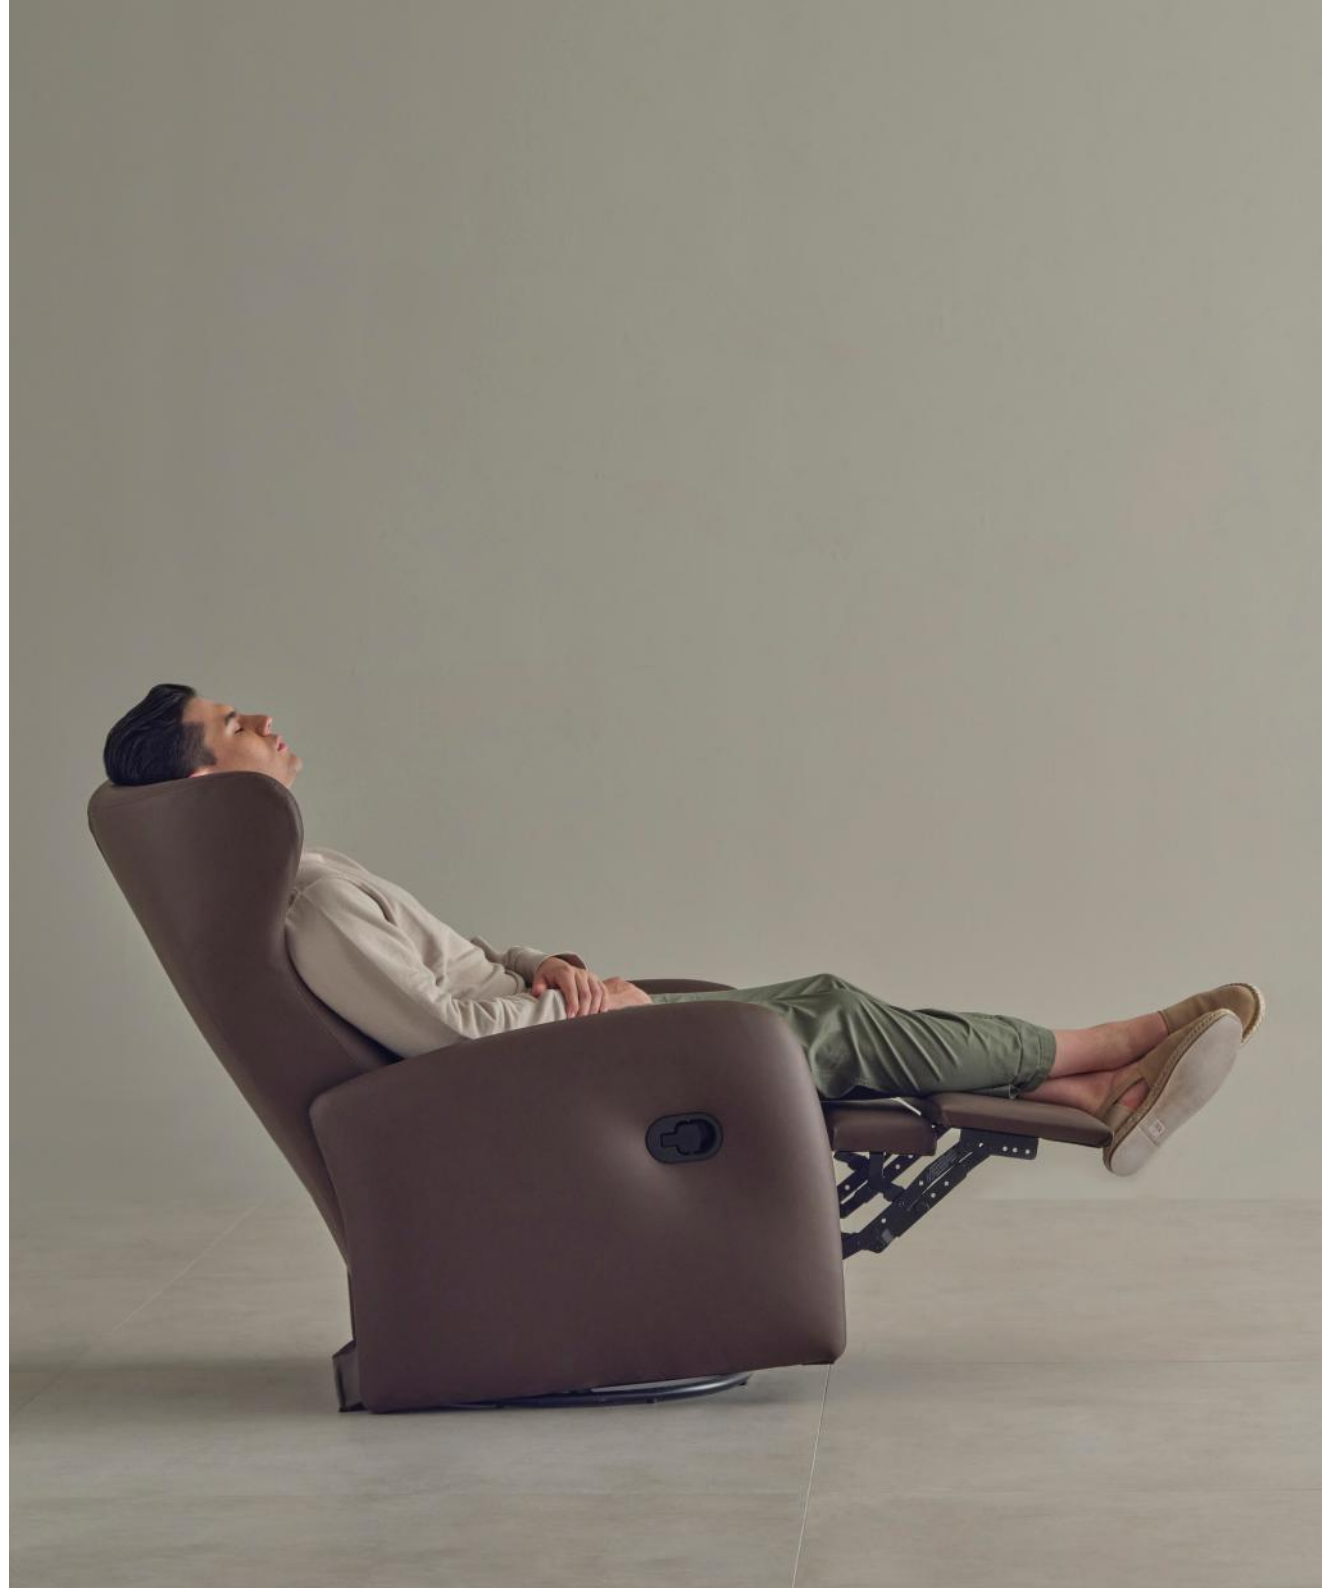

COMFORTABLE

Lazzoni foams offer a comfortable seating to the user thanks to their softness.

ERGONOMIC

Lazzoni foams are selected in the most suitable density and type by taking human anatomy into consideration.

FOAM

FOAM GROUPS

Soft Group

Divided into groups, such as Flex 30, Feather and Hyper Soft and it is soft enough to give an immersing feeling when seated.

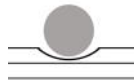

Hard Group

Hard Group is expressed in terms of DNS and intensity grows as DNS value is increased. As the intensity of foam is increased, the hardness will increase too. DNS foams are mostly used in couches that are used everyday and also as a bed.

HR Group

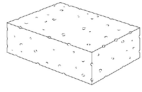

HR Group can also be called softened foam. It is created by adding the materials that gives softness to the foam and provides a base that is both durable and comfortable. It also resists to local collapses. It has values, such as 30-35-40 HR. In contrary to DNS values, softness is increased in HR foam as the value is increased.

FOAM

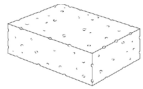

FOAM TYPES

Polyurethane Foam

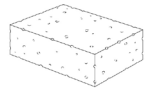

It is considered as the most suitable foam for producing ergonomic products as it provides more comfort and durability thanks to its versatile and open-cell structure.

Polyurethane foam, which can be turned into a mold and keep its form for long years, can be produced at any desired level of softness. We use polyurethane foam mostly in our chairs and armchairs.

HR35 Foam

HR35 foam is a special mixture and it can maintain its form for long years. It provides a comfortable seating and a ground to the user thanks to its softness. We mostly use HR35 foam in our sofas.

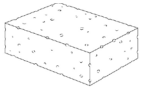

Feather Foam

This foam is called Feather Foam due to its structure that is as soft and flexible as a feather. We add a soft touch to our products with Feather Foam. We use feather foam mostly on the back side of couches and seating parts of armchairs.

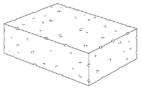

FOAM

FOAM TYPES

Experla Foam

An extra soft and resilient foam. Despite of its high level of intensity, its comfort is much more higher than normal foams. It causes a bouncing effect when you seat due to its high reactivity. It supports seating.

Farba Foam

Farba is soft and it swells easily. It provides a highly ergonomic and comfortable use. We mostly use frill foam in our sofas.
