TUBES

Established in 1992, Tubes is a truly one-of-a-kind case history in the radiator and heated towel rail industry, owing to the major focus on styling and formal innovation which has distinguished it since its market début, marking it out as a strongly innovative and dynamic company.

Tubes company headquarters are situated in Resana, in the province of Treviso, and all production takes place in-house. **Made in Italy** is one of the key values of the corporate philosophy, along with innovation, experimenting in shapes and technology, fine craftsmanship and superior quality.

BASICS BATH 25

Electric 

Basics is Tubes's standard collection. Yet, just like every product by the brand, the radiating bodies in the Basics collection embody the very essence of its design philosophy. They include radiators and tubular heated towel rails of various diameters, which can differ in their orientation, spacing, frequency, modularity and curvature.

The absence of visible welds, the clean-cut geometric shapes, the linearity of the overlapping, the customisation options guaranteed by the many dimensional variants, by a generous colour palette and by countless other solutions, are all characteristics which make the radiators in this collection something quite different from a simple technical appliance.
