

The Education Solution for Smart Classrooms

Hikvision's Education Digital Signage

HIKVISION®

What School Administrators Encounter

" School management staff often find it difficult to notify teachers and students of urgent information or sudden changes to class schedules. Furthermore, recording students' class attendance requires a considerable amount of time that should be used for instruction.

"

Inefficient classroom attendance recording

Manual classroom attendance recording takes a lot of every teacher's time. Conventional paper records are hard to upload and manage.

Difficulty sending important information efficiently

Urgent notifications, showing course scheduling and campus activities, cannot be conveyed to all teachers and students quickly and efficiently.

High-cost and inefficient networking requirements

Conventional products require engineers to establish a local area network (LAN) to unify a platform to send out information, especially in K-12 schools which usually do not have their own LAN.

What We Offer

" In a smart classroom, both teachers and students will enjoy new technologies empowering school management and teaching activities. Keep reading to see what novel changes Hikvision's Education Digital Signage can bring to a smart classroom. "

Efficient Class Attendance Recording

An all-in-one solution with instant face recognition, and school ID cards reduce the required effort spent on manual attendance checks.

Rapid Setup & Easy Management

The Education Digital Signage can be easily set up in classrooms, outdoor teaching areas, at library entrances, and school gates. Also, Hikvision screens connect to the platform via a public network, vastly reducing the need for multiple LAN setups.

Centralized management allows remote control of multiple devices and rapid upgrades, enabling school managers to configure all devices efficiently.

Effective Access Control

It allows students and teachers to control classroom door access via Education Digital Signage, based on their permissions. Managers can also remotely open and close doors through the HikCentral Professional platform to ensure classroom safety.

Diverse Education Information Publishing

The highly-efficient information publishing enables quick updates of campus information, class schedules, activities, and urgent notifications.

Easy Switching Among Six Modes

Meeting the Needs in Any School Scenario

Class A Attendance

Attendance Mode

In attendance mode, the Education Digital Signage can check and display student attendance results through face recognition or swiping school ID cards according to present curriculum, satisfying college administrators' need. Students' attendance data will be displayed on-screen at the same time to provide comprehensive protection for every student. Administrators or teachers can view multi-dimensional class attendance data and students arriving status on the management platform.

Campus Information

Campus Information Publishing Mode

In campus information publishing mode, pictures and video about campus activities such as campus sports games are presented on the screen to highlight and record memorable moments for students.

Urgent Notification

A strong typhoon is hitting our city tonight. Please go home as soon as possible after school. Don't stay out tonight.

Urgent Notification Mode

Urgent notifications will be displayed on the screen efficiently in this mode, so school administrators can send important updates to every class at once.

Class Mode

Examination Mode

Class Mode & Examination Mode

Any class status change can be instantly presented on the Education Digital Signage to help teachers, students and school administrators identify their curricula and conveniently arrange teaching activities.

Normal Mode

In normal mode, users can decide the preface module layout of the main interface to show various kinds of functional modes and enhance the user experience.

Product Showcase

DS-D6122TH-D/C

This cost-effective Education Digital Signage can be quickly setup for a wide range of campus applications.

- Luminance: 600 cd/m²
- IPX3 waterproof device
- Built-in 13.56 MHz RFID module
- Built-in face recognition algorithm, up to 10 individuals within the same frame
