## Basic Package

**The Solar PowerPort is always equipped with:**

Foundation

Steel Structure

Solar Panels

Optimizers and micro invertors

Lighting

**In addition, a number of options are available:**

Integrated charging stations

Battery

Energy management system

Execution in your own house style

The Solar PowerPort has a stylish, sleek and above all smart design.

It rests on two pillars.

As a result, it never stands in the way and users can easily get in and out of their car(s).

At the same time, the steel construction is extremely strong. It rests on concrete supports and can withstand all weather conditions.

### Scope

SUNOVERA takes care of everything: From infrastructure work and construction up to and including cabling and installation of the systems.

# Types

We have developed a number of different types

## Solar Powerport Drive

This is where it all began for Sunovera. From our drive to find a new carrier of solar panels (other than the roof of a building) this unique carport was born.

## Solar Powerport Cycle

This is a solar bike shed with the option of integrated charging points for e-bikes. It is available in any size.

## Customization?

A different format, a different destination, a combination with an existing construction or a Solar PowerPort completely with your corporate identity. Everything is possible. Challenge us!

Also available:

## Solar Powerport eGO

Extra large and suitable for e-trucks.

## Guarantee

- Solar panels: 25 years manufacturer's warranty and solar generation warranty
- Construction and welding work: 10 year warranty
- Charging stations: 5 years factory warranty

## Specialist in solar constructions

We are continuously looking for opportunities to combine current techniques in solar energy with modern, state of the art structures. With the Solar PowerPort we developed a unique solution for a shortage of space for solar panels and the optimal use of parking space.

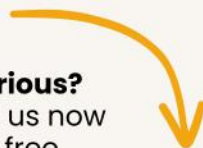

### Is the Solar PowerPort something for you?

We will visit you without any obligation to discuss your situation, listen to your wishes and to explain all possibilities.

With the Solar PowerPort we do not only want to offer you a top solution for your green energy needs. We also like to minimize the construction of huge solar parks in natural environments. Why waste more beautiful outdoor areas if there are already so many parking lots to start with?
