SILK SCREEN PRINT

We use traditional silk screen printing techniques to highlight the natural beauty of our Tencel fabric. A fine mesh screen is prepared first, creating a stencil of your design.

Eco-friendly, water-based inks are then carefully pushed through the screen into the fabric, one color layer at a time.

This hands-on approach ensures crisp, vibrant results while preserving an environmentally respectful process which perfectly complements the soft texture and premium finish of our Tencel. This printing technique is available for our entire product range.
