## COVERS AND PRICES FOR COM (FABRIC AND LEATHER)

Furniture ordered with Com: leather, velvet, fabric with patterns, or to be covered with two different fabrics (ex: structure in dark brown fabric, seat/back cushions in light brown fabric) or fake leather are quoted in cat. B.

For customer's one colour fabric in cotton without repeat price belongs to "C.O.M." for sofa beds.

Pre-wash of customer's fabrics - please check fabric features with your supplier before sending us requested meters.

All measures are stated in meters for fabrics and in squared meters for leather.

COM fabric and leather must be delivered to our factory address free that is at no charge for Bodema. In case of imported fabric, customs clearance and additional duties will be charged to Buyer on invoicing.

Bodema has not responsibility on customer's own material quality.

In case of order with two fabrics of different categories (ex: structure fabric in cat extra and seat-back cushions in cat top), consider the higher fabric category price.

If fabric is supplied with timing gap the same shade of colour can not be assured.

Covers (fabrics, leather, velvets), can present variations of tonality from one lot to another.

Natural materials colour variation can be accentuated.

Leather can present in the surface some natural imperfections like scars, folds, grades of tonality and/or sheen.

All these features certify the natural beauty, conformed to the good quality of our products. Sunlight can change the colours of the covers either in fabric or in leather.

## ORDER OF EXTRA COVERS

How to calculate the price of the extra covers for the sofa beds and beds: consider 50% of sofa price in the same measure (for sofa bed please take into consideration the fixed version), 60% in case of leather and COM leather.

For loose cushion please consider 70% of loose cushion price of the same dimension.

In case of orders of extra covers, we need to receive the old ones as reference.

If not, Bodema will be not responsible if the new ones fit larger or smaller.

## TOLERANCE

For production reasons, it is not possible to ensure the exact correspondence over time with the used materials (that fabrics, upholsteries etc) and therefore the colours of the fabrics in the collections may vary through the time.

## MARBLES

Natural stone origin, colour variations and veins, irregular surface such as porosity of the marbles should be accepted as material naturalness and beauty

## MAINTENANCE

The padding of the cushions with feather requires weekly maintenance; we recommend fluffing the cushions (beat by hands) to prevent the unpleasant problem of the accumulation of feather in certain zones and brushing especially in correspondence of the quilting because of dust

## SIZES OF THE MATTRESSES

Bodema adopts UNI standard method for supplied mattresses which is the international detection system, agreed to establish the correct size of mattresses.

Height, length and depth are taken by placing diagonally a rigid bar on the surface of the mattress so that the center of the bar corresponds with the geometrical center of the upper side of the mattress.

Measure the distance between the piping and the support surface at each corner of the piece, repeat on the other diagonal.

The height is the average of the four readings.

The buyer is kept to fulfill the costs and formality foreseen with regard to retention of title according to the law in force in the country where goods are sold.

# Rugs

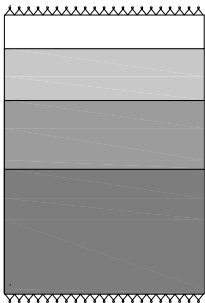

Carpets of FRAME, FULLPRINT, LAND and WATER collections are made in India and are hand knotted to 45 knots for square inch, that means 69.000 knots for square meter. The used material is Indian Wool knotted on a cotton warp. Main feature of these carpets is the use of two materials, Wool and viscose, whose features are more highlighted thanks to a V form carving, called "Beraï", which clearly separates them. The tassels are hand added and enriching each single carpet, making it unique. For all collection the Tibetan or asymmetric knot is used.

In Tibet is used an exclusive carpet weaving technique. While warping is at the same time used a stick to determine the pile height. A continuous thread is constantly wrapped around two threads of the wrap and later one time around the stick. When the entire thread line is completed, they are cut to be knotted.
