本地水產養殖業正面對兩大挑戰：其一是需要與入口水產品競爭，其二是消費者對魚類及海鮮缺乏信心。由於本地水產養殖的生產成本高，不可能以價格與入口

水產品競爭，提高本地漁產品的質素和設立品質保證系統，是

The local aquaculture industry is facing two major challenges: competition with imported aquatic food products and the lack of consumer confidence in fish and seafood.

Due to the high production costs locally, competition with imported aquatic food products by price is impossible. Improving the quality of locally produced aquaculture products, together with a product quality assurance system, is a promising way for local farms to compete with imported goods instead.

海鮮，都有品牌，它是來自本土的「優質」品牌。

漁農自然護理署自2005制訂了「優質養魚場計劃」，對登記魚場有一系列要求和規管，包括為新魚苗登記及檢疫，養殖期間，監察養魚場衛生、管理、用藥、飼料添加劑、魚類健康、水質等，出售前還要通過品質測試。

現時登記魚場所養殖海魚包括黃鰹鯧、石蚌、紅魚、石斑魚等，而塘魚則有大魚、鰻魚、鮫魚、鯪魚、烏頭及寶石魚等。

現時本港共有120個養魚場成功登記為「優質養魚場」，去年有14個養魚場新加

With heightened public awareness of food safety, quality assured aquaculture products can hopefully regain consumer confidence. In this regard, we have formulated an “Accredited Fish Farm Scheme” in a bid to promote the sustainable development of the local aquaculture industry.

Seafood sold under their brand names primarily come from homegrown premium brands.

Since its inception in 2005, the “Accredited Fish Farm Scheme” formulated by the Agriculture, Fisheries and Conservation Department (AFCD) has a set of rules and requirements imposed on registered farms, including the practice of fry registrations and quarantines. Regular monitoring from environmental hygiene, farm management, applications of drugs and feed additives, fish health to water quality will be conducted throughout the culture period. Pre-marketing quality assurance tests have to be performed too.

Currently, fishes cultivated under registered fish farms include Pompano, Star Snappers, Red Drums, Groupers while pond fishes feature Grass Carps, Mud Carp, Grey Mullet, Jade Perch and so on.

Till now, a total of 120 fish farms are successfully registered as the accredited fish farms. Last year, an addition of 14 fish farms joined the scheme that ramped up the total production under the scheme, indicating that its efficacy has been recognized by local fish farmers.

入計劃，增加整體計劃產量，可見計劃成效獲本地漁戶認可。05年至今，共售出超過35萬公斤獲計劃認證的優質漁產品，其中去年更佔10萬公斤，可見消費者對本地養殖生產的優質漁產品的需求熱切，及對「優質養魚場」品牌漁產品的信心。

今年初漁農美食嘉年華，有3代經營的本地有機魚塘參與展銷，負責人表示，首日銷情理想，開幕兩個多小時，80條彩虹鯛已售罄。

Since 2005, a total of 350,000 kilograms of premium fishery products accredited under the scheme were sold. Out of which, 100,000 kilograms were sold last year. It showed that consumers have a strong demand for locally cultivated fishes of premium quality and have confidence in the brands from Accredited Fish Farms.

Early this year, a local organic fish farm which has been run by three generations had participated in the Farmfest 2018. The person-in-charge of the booth said that sales were desirable on the inaugural day of the event. In the first couple of hours since its opening, 80 Red Tilapias were sold out.

尋找本地優質魚

(資料由漁農自然護理署提供)

優質養魚場計劃主要目的是在本地養魚場推行良好水產養殖方法，以提升本地漁產品的質素。把養魚程序標準化以增加生產過程的透明度，提高消費者對本地漁產品的信心。再者，計劃推行產品銷售前測試制度，建立及推廣本地優質魚品牌，突顯本地優質養魚場產品的安全生產。

優質魚的生產過程

1

本地養魚場按良好水產養殖方法操作

2

符合優質養魚場的管理標準，並接受巡查與監察

3

養殖場水質及漁產品必須經過各種品質測試

4

只有通過所有水質、重金屬、藥殘及孔雀石綠測試的漁產品，才可使用「優質養魚場計劃」標籤

✓ 零藥殘

杏仁花、樹、果的故事 Almond - From Orchard to Table

美國加州是世界上五個擁有地中海氣候的地區之一，氣候理想土壤豐沃，種植方式創新，做就加州成為全地最大的杏仁產地，而幾乎所有在北美市場出售的杏仁都生長在加州這個被稱為美國穀倉的「中央山谷地帶」。讓我們去參觀加州Califia Farms的農場，了解當地農民採摘杏仁及製造杏仁奶的可持續做法。

Virtually all of the almonds consumed in North America are grown in California's Central Valley. California is actually only one of five regions in the world with a Mediterranean climate. For almond trees, California is the place to be. It's the most productive almond farming region on the planet thanks to the ideal climate, rich soil, and innovative growing practices.

Ever wondered how to make almond milk? Let's take a peek inside the Califia Farms to find out the sustainable practices almond farmers employ on the almond's journey to becoming almond milk.

Califia Farms農場位於加州聖華金河谷，每年的11月到2月，杏樹在寒冷的天氣裡休眠，把養分儲存並埋藏在土壤，以培育明年作物。

杏樹2月下旬開始開花，一片花海，充滿杏花香。杏樹芽開始變成白色和淺粉色的花朵，吸引無數蜜蜂和其他傳粉者。

From November through February in the San Joaquin Valley, where Califia Farms is located, almond trees are dormant through the cold weather. Beneath the soil, they're storing nutrients for next year's crop.

Beginning in late February, almond tree buds begin to burst into white and light pink blooms to attract honey bees and other pollinators.

那麼這些花朵如何結果成杏仁？蜜蜂到花朵採蜜，當蜜蜂將花粉從一朵花帶到另一朵花時，授粉就會發生——這亦是杏子孕育的神奇時刻。

So how do those blooms bring about almonds? Bees are attracted to the flowers for their sweet nectar. As they buzz around, bees get covered in pollen. When the bees carry pollen from one flower to another flower, pollination occurs — this is the magical moment when the almond is conceived.

3月到6月，授粉的花朵成熟並結果成杏果，其核心就是我們經常食用的杏仁了。

經過六至七個月的生長期，果肉會漸漸收乾，其後自然裂開，露出果核。在收割前，杏果將會全部爆開。

Then from March to June, the pollinated flowers mature into fruit — at the heart of which is our beloved delicious and nutritious almond.

In late summer, the almond hulls, the outermost layer of the fruit, begin to open, revealing the almond shell on the inside. Just before harvest, the hulls open completely.

杏仁在秋天全部成熟後，農夫會利用搖樹器來幫忙。搖樹器會緊緊夾住樹幹，猛烈搖動，果核就像下雨一樣全被搖下來落在地上。在收集之前，果核會在果園中自然風乾10天。

Once the almonds are fully grown in the fall, shakers roll through each orchard row, touching every tree, to shake the almonds to the ground. The almonds then dry naturally for up to 10 days in the orchard before they are collected.

之後，農民會利用機器把果核脫殼、並去除樹枝、雜草和碎殼等，杏仁就此被分離出來。

杏仁的表皮可替代穀物，用作有營養的牲畜飼料。而硬殼則可用作可再生能源的生質燃料。

After harvest, almonds go to a huller, which passes the nuts through rollers to remove the hull and shell, revealing the so-called kernel — a.k.a., the almond.

The outer hull is then sold as livestock feed, a nutritious replacement for alfalfa and grains. The hard shell is sent off to biomass regeneration plants for reusable energy production.

杏仁然後會被送到工場再作處理，經過篩選、燙漂和研磨，而變成杏仁粉。

The almond kernels are then sent to Treehouse California Almonds where they are processed. Treehouse blanches the premium raw almonds before they're ground down to a fine meal. That almond meal will go into our Almondmilk.

加入水和其他成分便成為杏仁奶。杏仁奶於入樽前會經過巴氏滅菌工序，保證產品安全可靠。

After mixing up their special blend of almond meal, water and other ingredients, batches are pasteurized for your safety before being filled into our iconic bottle.

甚麼是杏仁奶 What is Almond Milk?

喝牛奶肚痛，吃芝士又肚痛？無論你是否乳糖不耐症患者、素食者，還是純粹只想轉轉口味，堅果奶都是牛奶的絕佳替代品，而杏仁奶是其中最受歡迎的堅果奶之一。

杏仁奶是植物奶，熱量低，含豐富的維他命和礦物質，包括維他命D、E和A、鈣、鎂、鉀、鋅、鐵和磷。杏仁奶中的脂肪是單元不飽和脂肪和多元不飽和脂肪（同屬好的脂肪），研究證明它可以減低患冠心病的風險。

Whether you're dairy intolerant, vegan, or just fancy a change, nut milks make a great alternative to cow's milk, with almond milk being a firm favourite.

It's low in calories and chock full of vitamins and minerals, such as vitamins D, E and A, calcium, magnesium, potassium, zinc, iron and phosphorous. The fat in almond milk is heart-healthy because it contains monounsaturated and polyunsaturated fats, which research suggests can protect against coronary heart disease.

下一個熱爆市場的超級食品：雪蓮果

Forecasting the Next Food Superfood: Yacon

每年都有不同的超級食品成為市場大熱，今次我們發掘到的是雪蓮果。

甚麼是雪蓮果？

雪蓮果，又稱為阿貢、菊薯、和雪蓮薯。這種甜美的根莖類蔬菜發源自南美洲的安第斯山脈，當地人稱之為「秘魯地上的蘋果」，可當是水果吃，而用以入藥以治療各種疾病已有過千年的歷史。雪蓮果現在普遍種植於新西蘭、意大利、捷克、菲律賓和越南等地。

We often find new superfoods and delve deeper into various claims surrounding them and in this issue we've found Yacon.

What is Yacon?

Yacon, also known as Peruvian ground apple, is native to South America where locals eat it raw like a fruit, and has been used as a food source and for medicinal purposes for over a thousand years.

雪蓮果的健康效用

雪蓮果是低聚果糖（FOS）的豐富來源。
*根據幾項臨床前和臨床試驗，FOS有利於促進健康細菌的生長，同時減少致病細菌的數量。此外，腸道微生物群FOS發酵的最終產物「短鏈脂肪酸」（SCFA）有效調節免疫能力，維持血糖穩態。因此，雪蓮果可以降低血糖水平、體重和患結腸癌風險。雪蓮果亦常用於營養補充劑作預防慢性疾病。

天然甜味劑

雪蓮果糖漿來自雪蓮果根部。先將根部的汁液提取出來，然後經過過濾和蒸發過程之成，製造方法跟楓糖漿相似。

雪蓮果糖漿升糖指數低，而熱量低於蜂蜜，楓糖漿和椰子糖。是新一代的天然甜味劑。

來自新西蘭的多年生塊莖雪蓮果，看似馬鈴薯，味道卻像梨子。
A perennial tuber from New Zealand which looks like a potato and tastes a bit like a pear.

This sweet, root-like vegetable originates and predominates throughout the pre-Andes ranges from Ecuador to Chile to Argentina. It is also grown in New Zealand, Italy, Czech Republic, Philippines, and Vietnam as well.

The Health Benefits of Yacon

Yacon is an abundant source of fructooligosaccharides (FOS).
*According to several preclinical and clinical trials, FOS intake favors the growth of health-promoting bacteria while reducing pathogenic bacteria populations. Moreover, the end products of FOS fermentation by the intestinal microbiota, short chain fatty acids (SCFA), act as substrates or signaling molecules in the regulation of the immune response, glucose homeostasis and lipid metabolism. As a result, glycemic levels, body weight and colon cancer risk can be reduced. Yacon root is effectively used as a dietary supplement to prevent and treat chronic diseases.

A Natural Sweetener

Yacon syrup is extracted from the roots of the Yacon plant. The juices from the roots are extracted, then filtered and evaporated in a chemical-free manufacturing process that resembles the way Maple syrup is made.

Yacon syrup scores best in the Glycemic Index for sweeteners that are sugar based and has lower caloric value than honey, maple syrup, and coconut sugar.

Arataki Honey 是南半球首屈一指的養蜂場，在新西蘭養殖了20,000蜂箱。

品牌於1944年成立，有兩大部門付責不同工作。Arataki Honey在羅托魯瓦(Rotorua)的分公司專責挑選優質蜜蜂產品，如不同花種蜂蜜、蜂巢蜜、蜂膠和蜂蠟等產品，以及管理蜜蜂包裝和出口，並在Bay of Plenty培養蜜后和管理果園授粉等工作。霍克灣(Hawke's Bay)部門則為當地和出口市場生產和包裝蜂蜜，提供當地授粉服務，那裡也開設了一所Arataki Honey遊客中心。

從蜂箱到每樽蜂蜜，質量都可追溯，保證Arataki是新西蘭最好的蜂蜜。Arataki Honey一向以人與蜜蜂和諧為本的精神，致力養殖健康蜜蜂和營運良好工作環境。

Cammells Honey 在新西蘭奧克蘭地區約有350個蜂箱。早春時候，他們的蜜蜂傳播奇異果、夏威夷果、南瓜等農作物的花粉。到夏天便將蜂箱移置到蜜蜂出沒的地點，讓蜜蜂們生產出美味的新西蘭聖誕花(Pohutukawa)，麥盧卡(Manuka)和草原野花(Pasture)蜂蜜。這些蜂蜜就地提取出來，然後運回位於Clevedon的工場進行過濾和包裝。

Arataki Honey is the number one beekeeping business in the Southern Hemisphere, with 20,000 hives across New Zealand.

The business, established in 1944, is run in two parts. The Rotorua Division of Arataki Honey are specialists in packed honey, bulk honey, comb honey, propolis products and beeswax, packaged bees for export, queen bees and orchard pollination in the Bay of Plenty. The Hawke's Bay Division produces and packs honey for the local and export market, provides local pollination services and is the site of the Arataki Honey Visitors Centre.

From hive to honey pot, every step of the way, quality and traceability are keys to making New Zealand's finest honeys. People and bees are at the heart of Arataki Honey. We are committed to good bee health and work place enjoyment.

Cammells Honey runs approximately 350 hives in the greater Auckland region.

In the early spring, their bees pollinate the crops of kiwi-fruit, macadamia nut and even pumpkin growers. Hives are then moved into their summer spots, where they produce delicious Pohutukawa, Manuka and Pasture honey. This honey is extracted in the field and then brought back to our premises in Clevedon to be filtered and packed.

美國 YumEarth 有機糖果 YumEarth Organic Candy from the U.S

我們只使用最樸實的口味、顏色和配料，來製造我們各式各樣的有機糖果。

由於我們的創辦人之一患有食物過敏，所以我們亦了解麩質、花生、乳製品和其他致敏原對健康的影響。我們不斷努力積極尋找安全的素材，以迎合不同顧客特殊飲食需求，而同時不影響我們產品的味道。我們大部分產品都不含8種主要的致敏原。

We try to use only the simplest flavors, colors and ingredients, and steer clear from artificial ingredients. Always have, always will. And since one of our founding dads suffers from a food allergy himself, we have a firsthand understanding of just how sensitive people can be to gluten, peanuts, dairy and other allergens. That's why we work to change our ingredients to accommodate as many special dietary needs as we can, without compromising YumEarth's world-famous taste. Almost all of our products are free from the top-8 allergens, check individual products for more information.

超市貨架上有不同類型的食用油，從亞麻籽到椰子油，都有其優點。最近大受歡迎的一定是山茶籽油。

山茶籽油亦稱為山茶油、茶籽油或綠茶油，源自生長在東南亞山區的成熟山茶花（油茶）的種籽。它是一種高品質的天然冷壓食用油，其高冒煙點（252° C，485° F）極適宜煮食，自古以來都被視為是一種富有高營養價值的補充食材。

與橄欖油和葡萄籽油類似，山茶籽油具有良好的儲存特性及低含量的飽和脂肪類。而當中的單不飽和油酸含量更可高達其脂肪酸的88%；具豐富維他命E和其他抗氧化物，並不含有任何天然反式脂肪。

*流行病學研究證明，山茶籽油的天然抗氧化物有益健康，其生物活性成份，有抗氧化和抗炎等功效。

Supermarket shelves are now groaning with different types of oil, from flaxseed to coconut oil— and all have their merits. The most recent contender is the much loved camellia oil.

From coconut oil to flaxseed oil to walnut oil, it's no wonder finding the best and healthiest cooking oil is overwhelming. Camellia seed oil will surely take over our kitchens soon.

Camellia seed oil is also known as tea seed oil or green tea oil, and comes from the seeds of well-matured *Camellia Oleifera* plants, which grow on the mountains of South East Asia.

With its high smoke point (252 °C, 485 °F), it is a high quality natural cold pressed cooking oil. For thousands of years, it is considered as a high nutritional dietary supplement.

Camellia seed oil resembles olive oil and grape seed oil in its excellent storage quality and low content of saturated fat. Monounsaturated oleic acid may comprise up to 88% of the fatty acids. It is high in vitamin E and other antioxidants and contains no natural trans fats.

*Epidemiological studies have shown that increased dietary intake of natural antioxidants is beneficial for health because of their bioactivities, including antioxidant and anti-inflammation actions.

新西蘭的麥蘆卡蜂蜜一向是品質保證。因而越來越多其他國家的生產商會設法讓買家相信他們的產品是來自新西蘭的蜂蜜，或者至少跟新西蘭蜂蜜也是同樣優質。

由於全球對蜂蜜的需求殷切，養蜂人和蜂箱的數量也不斷增加，但蜂蜜出口的增長速度卻比之快八倍。這問題就來了- 那何來有足夠的蜂蜜應付市場需求？究竟蜂蜜從哪裡來？

詐騙於環球食品行業是一個重大的問題。由於被揭發的可能性小而利潤高，就算被抓獲，刑罰又欠阻嚇力，所以吸引不少犯罪集團參與其中，而產品故意被其他產品替換、摻入雜質、貼錯或偽造標籤的情況相當嚴重。目前，全球食品欺詐估計佔50萬美元的市場。*

Mānuka honey from New Zealand has always extracted a premium and more and more overseas producers are finding ways to make customers believe that their products are NZ honey, or at least as good.

The number of hives worldwide is increasing, but honey exports are rising about eight times faster. This raises the question - where does all this surplus honey come from?

Significant levels of fraudulent activity are occurring, and many organized crime syndicates are attracted due to the low likelihood of being detected, high profit, and negligible consequences if caught. Currently, global food fraud is estimated to be a \$50USD billion market. *

Mānuka Originz™ 如何追查蜂蜜的來源？

在新西蘭，所有標有Mānuka出口的蜂蜜都必須經「新西蘭初級農業部」認可的實驗室進行測試，以確保其符合新的Mānuka蜂蜜定義。

而所有來自新西蘭「加維麥蘆卡集團」的產品都經過第三方認證機構Oritain認證，以先進科技鑑定蜂蜜的來源。由Oritain頒發的商標Certified Mānuka Originz™ 保證認證的麥蘆卡蜂蜜是來自新西蘭，而每批產品都可追溯到其最原始的來源。

為了提供蜂蜜產品的完整追溯性，並確保蜂箱得到最佳管理，每個蜂箱都配有獨特的電子識別標籤。工作人員在現場掃描標籤，以記錄蜂箱在全球定位系統位置，然後養蜂人將蜂箱的活動和細節直接輸入到智能手機上，並每天將這些信息傳送回我們的數據庫。

透過先進的追蹤及管理系統，從最初在蜂箱採收，到蜂蜜入樽的整個過程，都清楚記錄，一目瞭然，讓你安心享用。

How the Mānuka Originz™ Works?

In New Zealand, all honey labelled as Mānuka for export must be tested by an MPI-recognised laboratory to make sure it meets the new Mānuka honey definition.

All the products from New Zealand Mānuka Group are certified by Oritain, who independently and scientifically verifies the origin of food products to a forensic standard.

The trademark Mānuka Originz™ issued by Oritain guarantees genuine Mānuka Honey sourced only from New Zealand with each batch fully traceable back to its original source.

To provide customers with full traceability of our honey products, plus ensure the best management of our hives, every hive is fitted with a unique electronic identification tag. The tag is scanned on site that records the GPS location of the hive, while the beekeeper then enters actions and details of the hive directly onto their iPhone. This information is transferred back to our database on a daily basis.

As the honey is extracted and processed, our database is updated accordingly. From the collated data we then have a wealth of information right back to the exact location of each hive, all the way through to the final product.

追查蜂蜜的來源 Verifying Your Batch Code

可以登入 Originz 官方網頁：<https://oritain.com/partners/manuka-originz>

使用 New Zealand Mānuka Group 旗下的Kiwi Mānuka 產品罐上的批次號碼來追查蜂蜜來源。

Certified Mānuka Originz™ 是向顧客作出嚴格品質標準的保證，從麥蘆卡的花朵，到你手上的麥蘆卡蜂蜜產品，都可全面追蹤。

By clicking the link above, you'll be taken to the Oritain's website. Here you will be able to enter the batch number of your selected honey product, which will present you with a certificate of origin. This means that a honey sample has gone through the scientific process to establish an origin fingerprint, which can be tested against anywhere from the supply chain through to the product in market.
