

MontiPower launches the HighMate Prepper Surface Preparation Robot at the SMM Maritime Industry Hamburg 2024 show

Monti-Werkzeuge GmbH, headquartered in Hennef, near Cologne, is a manufacturer of tools for surface preparation. Under brands like Bristle Blaster or MBX, the patented wire blasting solutions are used all over the world for maintenance and new building of assets such as marine vessels.

Together with Robot++ from China, a developer of robotic for working-at-heights, Monti developed a new robot called the Highmate Prepper.

At SMM 2024, Monti is displaying the new HighMate Prepper in front of tens of thousand visitors at the maritime industry's leading global trade fair from booth B5-323.

We are proud to announce this new co-development and strategic partnership based on the principle of bristle blasting for welds, maintenance and coating spot repair.

The robot is remarkably easy to operate. Please come and see.

Robot++ is an engineering-led company developing working-at-height robots to provide efficient and environmentally friendly solutions while guaranteeing a safer workplace. They combine robotics, AI, and RaaS to develop autonomous products. Robot++ robots have cleaned approximately 1 million square meters.

Monti from Hennef is in the surface preparation business for automotive and industrial coatings since 1987 and is excited about this cooperation with a similar mind-set company. This mind-set is the first step in innovation and extremely important for collaboration.
