DIE CUT
PRODUCT GUIDE

WAUSAU COATED DIE CUT PRODUCTS

Our Premium Die Cut Sheets are the ideal solution for delivering top-notch quality and cost-effective pressure sensitive labels. With our comprehensive range of facestocks, we offer both laser and digital print options tailored to meet your specific label requirements. Our extensive collection boasts over 200 die cut options that are stocked and available in a wide range of facestocks suitable for both monochrome and color/laser applications.

Looking for die cut products for your digital presses? Wausau Coated Products now has a selection of pre-die cut sheets in 12″ x 18″ sheet sizes for HP Indigo and Production presses (see page 2 for available products).

Quick Cut Die Cuts
If utilizing a stocked pressure sensitive listed and a stocked die, the minimum order quantity is 1,000 sheets for 8 1/2″ x 11″ sheet size with a leadtime of 2-3 business days.

Custom Die Cuts
If utilizing a stocked pressure sensitive listed and a custom die, the minimum order quantity is 1,000 sheets for 8 1/2 x 11 sheet size or 5,000 sheets for 12 x 18 sheet size. Die charges may also apply. Die charge will also apply.

For true custom die cuts (custom pressure sensitive and custom die), the minimum is dependent upon the raw materials. Die charge will also apply.

Contact Us for more information regarding our premium pressure sensitive die cut sheet product options or call us at 800-345-8039 and we will gladly answer all your questions. Wausau Coated Products is your trusted source for state-of-the-art die cut sheet label products.

Please inquire with our Customer Solutions Team for a full listing.

Astrobrights® Laser Labels

Looking for environmentally responsible label materials? Check out our assortment of Astrobrights labels. Our range consists of six vibrant colors, available in various shapes, all of which are FSC® certified. These labels are perfect for inventory control, warning notices, and brightening up your shipping and address labels. They also boast impressive strength, making them suitable for use with offset, flexographic, and laser/toner printing methods.

Brown Kraft Labels

Brown Kraft has the coloring and consistency of a brown paper grocery bag and is designed to run through both inkjet and laser printers. This facestock gives a cozy, primitive, rustic or "earthy" look for label applications – perfect for any label application requiring a unique appearance.

Product #	Label Size Width x Height (inches)	Labels per Sheet	Shape	Corners	Comparable to Avery® Layout*
BROWN KRAFT LASER STOCK DIE CUT LABELS					
DC00029	$1^3/_4$ x $^1/_2$	80	rectangle	RC	5167
DC00032	$2^5/_8$ x 1	30	rectangle	RC	5160
DC00033	4 x 2	10	rectangle	RC	5163
DC00102	4 x $1^1/_3$	6	rectangle	RC	5162

Quick Cuts

Need a non-stocked item fast? Wausau Coated's Quick Cuts may be the perfect solution for you. Quick Cut products are those that utilize a stocked pressure sensitive sheet product listed on the following pages as well as a stocked die. Minimum order quantity is 1,000 sheets, in $8\frac{1}{2}$ x 11 size only. Orders can ship in 3-5 business days.

Label Size - Width x Height	White Uncoated	Semi Gloss	Astrobrights	Fluorescents	Brown Kraft	White Uncoated Removable	White Uncoated Blockout	Clear Polyester	Bright Gold Foil	Dull Gold Foil	Bright Silver Foil	Dull Silver Foil

KEY

All adhesives are permanent except where noted

✓ Stocked item (ships in 1-2 business days)

△ Quick Cut (ships in 3-5 business days)

- Custom die cut sheets

- Custom: call for lead times and upcharges

- MOQ = 2,000 sheets

Storage and Handling

- Store on flat surface (non concrete) at 72° F and 50% relative humidity.

- When new product arrives, rotate older stock to the front.

- Keep packages sealed until ready for use and return unused stock to carton.

Press Preparation

- 24 hours in advance acclimate stock to shop conditions.

- To avoid misfeed and sheet drag, clean and adjust grippers and guides.

- To prevent face and/or label separation, do not bend toward the liner – fan and bend ream towards the face.

- Do not load higher than six inches in press feeder.

Offset Inks and Varnishes

- Always use fresh ink, preferable low-tack, and test ink before printing. Your ink supplier can recommend ink for specific pressure sensitive stock.

- Keep press speeds low to start.

- For non-absorbent facestocks, use oxidizing inks including synthetics and heavily coated sheets.

- If stocks will be laser printed; then specialty inks are needed to withstand high temperatures – up to 400° F – and the pressure of laser printers.

- Always monitor fountain solutions (pH level of 5.0 to 5.5) as the pH level can inhibit drying of oxidizing ink.

- When using UV varnishes, verify the varnish is compatible with your ink system. Use a thin coat for full polymerization. A thick deposit of clear coat may not cure properly and a post cure can cause labels to curl up from the liner.

Laser Printing as a Second Print Pass

- It is recommended to consult your ink supplier for compatible inks that withstand pressure and heat – up to 400° F.

- Standard inks could potentially contaminate the fuser and produce unpleasant or hazardous fumes.

- To prevent abrasion from the picking and feeding mechanism, inks should be scuff resistant.

- To avoid adding too much moisture to the paper, monitor the amount of ink and fountain solution during offset printing and before laser printing.

- Avoid designs with large areas of heavy ink. The excessive moisture through high ink coverage could cause curl.

- Verify that any specialty process is capable of withstanding the demands of a laser printer. Some specialty processes – like embossing and foil stamping – do not tolerate demanding laser printing.

- Avoid spray powder, which can inhibit imaging and fusing as well as leave deposits on the laser printer, resulting in equipment damage and downtime.

- Avoid preprinting, which can hinder inkjet printing since it alters the absorption properties of the facestock.

Laser, Copier and Inkjet Printing

- Before loading laser printer, fan stacks by bending ream towards the face. Fanning pressure sensitive labelstock toward the liner may cause labels to lift from liner.

- Reference printer manual for print selections that may optimize a label media product's performance and appearance.

- To avoid contaminating the printer's drum, don't run damaged pressure sensitive sheets or sheets with labels lifting or missing through printers. The exposed silicone liner can build up and weaken the stiffness of the sheet, which can result in misfeeds and jams.

- To avoid heat build up that leads to sheet curl and predisposing, run sheets of labels through laser printer one at a time.

- Do not use a pressure sensitive sheet that doesn't have a laser compatible adhesive. Pressure and high temperatures of laser printing can cause non-laser compatible adhesives to ooze.

- If the internal matrix is stripped, do not use laser printer sheets. The exposed liner has a silicone coating that over time will contaminate the drum, and the weakened sheets can misfire and jam.

Guillotine Trimming

- Blades should be clean and sharp. Dull and dirty knives will drag adhesive out of the side of the labelstock and contaminate the face.

- For pressure sensitive constructions, newly ground double beveled knives of high-quality steel are recommended for best results. A 1/8″ wide primary bevel of 24° or 26°, and a secondary bevel of 22° to 24° are good starting combinations.

- Keep clamp pressure as light as possible, just enough to hold the lift in place without shifting. Too much pressure increases the lift density and the knife may deflect as it cuts deeper into the material.

- Cut through the back of the stock with the face down. This allows the knife to contact the paper liner and release coating, then the adhesive and face.

- If material is overcutting (the lower sheets in the lift are longer than the upper), the blade may be dull, clamp pressure could be too high, or blade may have the wrong bevel. For soft paper, decrease bevel angle by 2 degrees (26° to 24°). For hard paper, increase bevel angle by 2 degrees (26° to 28°).

- Guillotine trimming compresses the pressure sensitive edges. Gently fan the stock by carefully bending the ream towards the face to allow sheets to feed smoothly through the printer.
