# whatzit = Tomato

How many clues do you need to guess what the WHATZIT is?

1-3 clues - Outstanding; 3-7 clues - Very Good; 7-10 clues - Time to study up on your WHATZITs.

- WHATZITs are native to South America, most likely originating in Peru, and were probably introduced into central Mexico by the Aztecs around A.D. 700.
- Some experts believe that Christopher Columbus may have introduced WHATZITs to Europe. At that time WHATZITs were probably small and yellow.
- The earliest known writing about WHATZITs appeared in a book by an Italian botanist in 1544. And the earliest known cookbook using WHATZITs was published in Naples in 1692.
- WHATZITs grew easily in the Mediterranean climate and spread quickly throughout the region.
- England was slower to adopt WHATZITs because herbalist John Gerard thought they were poisonous. (The leaves and stems do contain some poisons, but the fruit does not.)
- Today WHATZITs are grown worldwide, and many different types have been cultivated.
- The heaviest recorded WHATZIT weighed almost eight pounds.
- Most WHATZIT cultivars produce red fruit, but they can also be found in yellow, orange, pink, purple, green, black, white, and even stripes.
- Some WHATZIT cultivars include: Beefsteak, Better Boy, Early Girl, Brandywine, Cherry, and Plum.
- It's hard to imagine Italian food without WHATZITs, but the ancient Romans never used them because WHATZITs hadn't yet been introduced to Europe.
