

# COLUX

signature collection

by Colux

In an industry where most manufacturers have relocated production overseas, Colux remains proudly committed to Australian craftsmanship.

We machine and hand-finish each metal fascia, produce our plastics sustainably, and undertake all design, assembly, and rigorous quality control testing on Australian soil.

Choosing Colux for your projects, architects and interior designers are not only specifying exceptional, enduring products, they are actively supporting skilled local industries, preserving expertise, and contributing to a more resilient Australian manufacturing future.

*"This book is here to share our obsession with crafting the art of electrical. We're here to collaborate and create extraordinary spaces with you."*

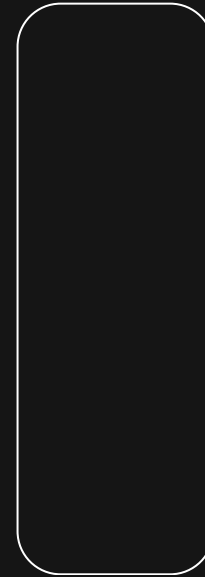

Lachlan Dunn | founder

# signature collection

square edge

curved edge

The Signature Collection offers a cohesive design language through its distinctive edge profiles. Each range in the collection provides architects and designers the flexibility to specify either the sharpness of a square edge or the softened contours of a curved edge detail, ensuring seamless integration with diverse spatial aesthetics.

## element

---

SE

The elements of copper (Cu) and zinc (Zn) form the alloy of brass. From this, our signature edges are carved out and hand-finished to create our Element range. Available in a classic or touch version for switching.

## nuance

---

SN

A soft matte white or black finish crafted from durable materials. The Nuance range allows economical coverage throughout your spaces.

The Signature ranges offer a uniform design language across each function.  
A language that complements your space,  
your architecture,  
your home.

# element in touch

Your smart home starts with a touch. Made for seamless integration, the Element in touch range is a design that replaces mechanical buttons and replaces it with effortless control of lighting, shades, music, and scenes with a simple touch.

built for smart homes

## multi-touch room control

Create the perfect atmosphere at the slightest touch.  
Activate scenes by simply touching two or more faces at the same time.  
The lights dim and the curtains close. Ready for a cosy evening.

a KNX feature

## design without limits

Combine edge details to create a homogeneous yet dynamic aesthetic. Pair square-edged switches with curved outlets to craft a tailored design that perfectly aligns with your design vision.

- square or curved edges available in all signature ranges.
- each range offers matching outlets & ganged plates.
- for non-touch ranges, all switch, dimmer & comm mechanisms are universal 30M Clipsal® style - supplied by installer or other.
