

INSULATED FIREPROOF ECO GARDEN OFFICES

Made in Britain to cope with British weather!

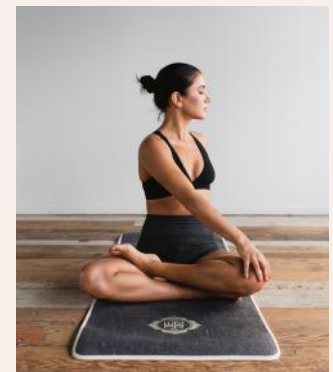

**Off the peg
or made to measure**

Room to work, rest or play

The recent shift towards working from home, hybrid working patterns and flexible working hours can put even heavier demands on homes that already need to provide multi-function space for the busy modern lifestyle.

A unique and cost-effective way to gain extra space, our garden offices are suitable for a wide variety of uses and, thanks to the high level of insulation, they are ideal for year-round use. A designated environment for people with creative careers or pastimes, our buildings can be used as a light and airy garden office, art studio, home gym, hobby room or just a relaxing garden retreat away from the house - the possibilities are endless!

“Maintaining clear boundaries is an important factor in achieving a good work/life balance and less time travelling means you have more time to spend enjoying life.”

Why have a garden office?

When you invest in your own garden room, it will offer you a number of key advantages and benefits compared to a typical in-home office. If you do any type of work from home, then you already know that numerous distractions can affect your progress. Whether it's family, pets, or maybe the temptation to make more frequent visits to the fridge, a makeshift workspace in the house is far from ideal.

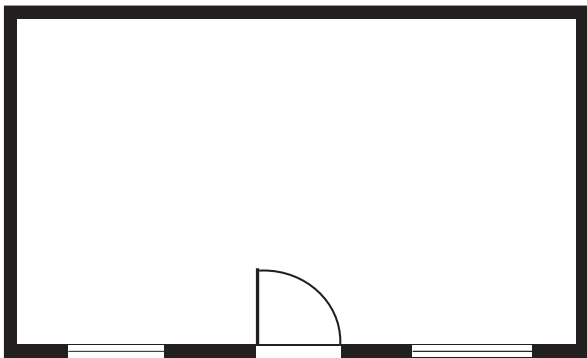

However, the sanctuary and separation that a garden room provides can not only help to minimise numerous distractions but it can also help to improve concentration, making you more productive and, when the work is finished, you can just lock up and enjoy a much shorter, more relaxed journey home!

Tell me more

Built at our factory in Kent, our garden offices are made using pre-engineered structural insulated panels that have a fireproof coating to provide one hour fire protection. The design of the panels not only means you can use your new space whatever the weather - with no heating required, but also that the construction process is extremely fast. The insulated floor panels are supported by a steel subframe the height of which can be tailored to your individual requirements which is especially useful for slightly uneven sites. This system also means there's no need to lay a concrete slab and, being off the ground, the building is much less likely to be affected by damp or flooding.

On the following pages you can see several examples of our range of home offices. They are available in a choice of standard sizes but if we don't have something suitable, please talk to us about our bespoke design service; we can build to your specification which means that whatever size garden you have, we are confident we can build the perfect room for you.

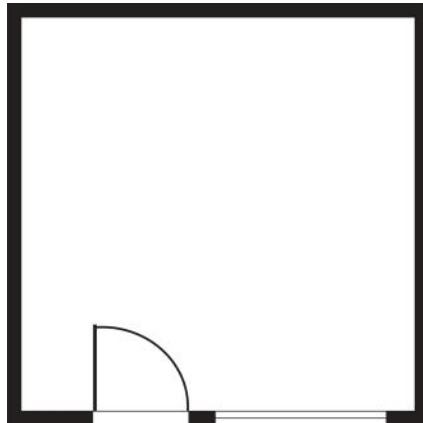

The Lodge

5.0m x 3.0m

Shown above with wood grain textured cement board external cladding
