MELORA

Caring for nature, while it cares for you.

Caring for our land

Our Manuka trees grow in an untouched paradise - hives are helicoptered in and left in peace for the season to reduce interference and environmental impact.

Our beekeepers understand well that health bees = health honey. They check all our hives regularly, checking temperature, bee health and making sure that our smallest workers who produce the rare Manuka honey, are all happy and healthy.

Pure and original - all kept as nature intended.

Our Manuka honey is pure and unpasteurized with all the natural goodness kept and sealed into a jar. We extra more than 3000 honey frames daily during harvesting season. Raw honey is then lightly processed and slowly stirred for its even creamy texture. No alteration, no additives, no compromise. All natural.

Powered by Manuka innovation.

We are committed to empowering a healthier life with ethically harvested Manuka products from New Zealand's extraordinary super plant. To develop future-generation Manuka-based innovative products, our in-house R&D team with over ten years research experience in Manuka are unlocking its secrets and bringing it into products for everyday life.

Not just Manuka honey but also Manuka oil and more.

點揀最靚抹茶？ LOOKING FOR THE BEST MATCHA?

綠茶只是一個統稱，泛指未經發酵而成的茶葉。常見的綠茶有煎茶、龍井、玉露、碧螺春、黃山毛峰等。抹茶是綠茶的一種，其製作是採收經遮陽覆蓋的新芽茶葉並把它們磨成明亮的極幼細粉末。

(1) 栽種技術

優質抹茶會採用「覆蓋遮陽技術」以提升茶葉的質量、風味、顏色和養份。隨著茶葉生長週期變化，遮光率要逐步提高。當茶青長至一芽二葉，便會進行覆蓋，減少約70%陽光照射，到最後遮光率會提升至95%至98%。由於陽光被遮擋，茶葉的光合作用速度會降低，促使茶葉中茶氨酸、兒茶素和氨基酸含量升高，而這些元素，令抹茶的味道更香濃。

(2) 殺青方法

抹茶需要「蒸氣殺青法」來進行殺青，相比一般製程使用高溫炒鍋殺青更為快速，且品質均一，防止茶葉加工中氧化，並去除青草氣，發展茶香，極大保留茶葉營養。

(3) 研磨方法

研磨是一種耗損的過程。研磨時轉速越快、溫度越高，就會造抹茶風味和顏色的耗損。研磨後的幼細程度即是抹茶口感的關鍵。顆粒越細，口感越順滑。

(4) 成分是否純正

小心選擇是否100%抹茶產品，有些產品可能混入綠茶粉、糖和奶粉等。

(5) 安全無農藥

如果茶葉使用農藥，由於抹茶是整片磨粉而成，因此食或喝下肚的農藥也會比其他茶葉多。所以採購有機產品會比較安全。

The green tea is an umbrella term generally referred to dried tea leaves without going through the fermentation process. The most popular green tea includes Sencha, Longjing, Gyokuro, Biluochuan, Huangshan Maofeng and many others.

A kind of green tea, Matcha is a bright-green, super-fine ground powder made from tea buds completely shaded before harvest.

(1) Tea Plantation Technique

Prior to harvest, tea buds for making premium Matcha are protected from the shade-grown technique which enhances the quality, flavour, color and nutrition benefits of the resulting Matcha. With the changes in the growth cycle of tea, the shading rate will be gradually increased. When the new tea buds spread 1-2 leaves, the shading rate will reach to about 70%, and then the sun-shade nets will be used. As the leaves gradually spread out, the shading rate reaches to about 95-98. As sunlight has been blocked out, it will reduce the rate of photosynthesis, resulting in high levels of theanine, catechin and amino acid in tea leaves. That's why Matcha has a full-bodied flavour.

(2) Fixation

As opposed to the traditional high temperature frying, Matcha produced by the "steam fixation" method can prevent the original ingredient from being oxidized during the process while removing the grass scent to purify its aroma and retaining its nutrients.

(3) Milling Condition

Refined milling causes the loss of flavour and colour in the process. The more rapid the milling, the higher the temperature is, making the fading of the matcha's flavour and its colour unavoidable. The mouth-feel sensation of Matcha greatly depends on the fineness of the powder. The more refined the powder, the smoother its texture is.

(4) Pure Ingredients

To make sure that you have selected 100% pure Matcha, check out if any green tea powder, sugar and milk powder are on the ingredient list.

(5) Safe and Pesticide Free

Organic Matcha is a safer choice for consumers. Matcha is milled from whole leaves. If the source contains pesticide residues, Matcha drinkers may have a higher intake of pesticide residues than other drinkers of non-ground teas.

抹茶與綠茶粉

MATCHA VS GREEN TEA POWDER

抹茶與綠茶粉的原料皆為「綠茶」，但製程上卻大有不同。由於抹茶在種植、製作等各方面的要求都比綠茶粉更嚴謹更講究，種植和加工方法相對花時間和心力，因此格外珍貴，價格亦比綠茶粉高出多倍。

Both Matcha and green tea powder originate from green tea, but they go through different production processes. More demanding in time and effort, Matcha is grown and made under more stringent requirements than other ground green tea products. Therefore, its price is a few times higher than those of the latter.

營養成分 Nutrients	抹茶的蛋白質、維他命A 和微量元素含量相對較高。 由於把整片茶葉是嫩芽直接研磨成粉末，在營養的攝取上，會比其他種類的茶葉更為完整，亦更易吸收。 Matcha has relatively higher level of protein, Vitamin A and trace elements; Low loss of nutrients, almost all of its nutrients could be absorbed and utilized by the human body.	
抗氧化物 Antioxidant	抹茶所含強力抗氧化物EGCG濃度，比一般綠茶高出許多倍。 Matcha's antioxidant (namely EGCG) concentration is a few times higher than that of other green teas.	
茶氨酸含量 L-Theanine	抹茶含有一種鎮靜氨基酸 - 茶氨酸，對咖啡因有抗衡作用，有助情緒放鬆，不會像咖啡一般令人不能入睡。 Unlike coffee that keeps drinkers awake, Matcha contains L-Theanine, a calming amino acid that produces a relaxing effect to drinkers while counteracting the caffeine's side effect.	
餐飲業應用 Applications in food industry	現今最普遍是入饌成甜品及茶飲。 Nowadays, Matcha is widely used as ingredients for desserts and drinks.

做隻快樂大肥豬 — Borrowdale天然走地豬 HAPPY, PLUMP PIGS ROAMING FREE AT BORROWDALE

走地雞大家都很熟悉，但走地豬大家食過未？

飼養走地豬，需要的土地當然要比一般豬欄大很多，更要有青山綠水，豬隻住得開心食得安心，自然長出好肉！

來自澳洲昆士蘭的Borrowdale天然走地豬，在當地一個佔地10000英畝的農場成長。農場是澳洲防止虐待動物協會（RSPCA）認證的農場，確保豬隻以人道和天然方式飼養。

Borrowdale走地豬肉肉質豐腴、彈牙、多汁，豬肉味濃郁而沒有騷味，脂豐香口卻不油膩。非一般打荷爾蒙同激素谷肥的豬肉可比。

Borrowdale天然走地豬獲澳洲豬肉品質協會的「天然飼養認證」，質素有保證。

Familiar with free-range chickens? Have you ever tried any free-range pork?

Free-range pig husbandry requires a plot of pasture much bigger than the average farm. Surrounded by green mountains with pristine water beneath, chubby pigs are eating well and growing well in a stress-free environment.

From Queensland of Australia, Borrowdale's natural, free-range pigs are raised in the local green field with a size of 10,000 acres. The RSPCA-certified farm is the assurance that pig rearing is aligned with animal welfare principles.

Borrowdale's free-range pork is succulent, tender, juicy, flavourful with a melt-in-the-mouth texture, and not greasy, which is far above par as opposed to hormone-fed pork.

The quality of Borrowdale's natural free-range pork is ensured through the Australian Pork Industry Quality Assurance Program (AQIP)'s free-range standards.

「優質養魚場計劃」是由漁農自然護理署為提高本地漁產品的質素及設立品質保證而成立的計劃。透過推廣良好水產養殖方法、生產程序標準化及進行產品銷售前測試等方法，為市民提供本地養殖低碳、安全優質的漁產品。

魚類在養殖過程中必須遵守既定的管理制度。漁產品在銷售前通過品質保證測試才能取得優質證書，使用「優質養魚場」品牌及二維碼溯源標籤出售。標籤正面印有優質養魚場認證標誌，背面則印上魚獲號碼及獨立的溯源二維碼。市民只要掃描二維碼標籤，便能讀取養殖魚的來源、養殖場的資料及食品安全檢測結果。獨特的魚獲號碼使標籤成為了優質魚的「身份證」。

港人自設有機農場 為消費者及餐飲業提供優質安全農作物

HONGKONGESE RUNS ORGANIC FARM TO OFFER SAFE & PREMIUM PRODUCE FOR RETAIL & COMMERCIAL CONSUMPTION

港人蔡建中於2013年於中國湖南省永州市藍山縣，開設有機農場「農圃有機」，種植超過70種以上農作物，包括“中式菜”（包括：芥蘭、菠菜、甜菜心、白菜和椰菜等）、“西式菜”（包括：沙律菜、羽衣甘藍、孢子甘藍）、各類瓜果及有機越光糙米等。

自設666,000平方米的有機農場及39,960平方米的有機水稻農場，面積之大相等於3.7個維園，每年可提供有機蔬果超過100噸，保證一年四季皆可為消費者及餐飲業提供穩定的農作物作採購。而限量提供的有機越光糙米產量約4噸，幫助大家實踐 From Farm to Table 的飲食潮流。

所有農作物均獲得OFDC（南京國環有機產品認證有限公司）機構頒發的中國有機認證，並獲IFOAM（國際有機農業聯盟），COR（加拿大有機認證）及USDA（美國有機認證），並由Intertek作不定期抽檢農藥殘留及重金屬檢測，保證農產品有機、優質及安全。

Back in 2013, Hong Kong people Robert Chua created his own organic farm with nothing but a dream – a dream to provide safe and delicious organic produce at an affordable price to the general public. Located in a virgin land in Lanshan, Yongzhou City, Hunan Province, China, Farmers Choice grows over 70 different kinds of produce, including everyday Chinese vegetable (such as Chinese kale, spinach, sweet choy sum, cabbage, etc), Western-style vegetables (such as salad pack, kale, spore cabbage), melons and organic Koshihide brown rice that the quantity is now big enough to meet the growing demand from the catering industry.

Important figures:

- 666,000 square meters of organic farms + 39,960 square meters of organic rice farms (equivalent to 3.7 Victoria Parks)
- Produce more than 100 tons of organic fruits and vegetables every year
- More than 4 tons of organic Koshihide brown rice

Quality assurance:

- China Organic Certification by Organic Food Development Center
- IFOAM
- COR (Canadian Organic Certification)
- USDA
- Intertek – for regular pesticide residues and heavy metals testing

各種新食材，誠意推介給大廚引入菜單中！ FOR CHEFS OF ALL KINDS TO DISCOVER NEW INGREDIENTS AND INTRODUCE SURPRISES INTO THE MENU!

我叫芥蘭頭，但唔係芥蘭 It's Called Kohlrabi and It Is Delicious

芥蘭頭（又稱大頭菜）不是芥蘭菜，屬十字花科根莖類蔬菜，與西蘭花、羽衣甘藍、椰菜是同一個家族。不同品種的芥蘭頭，顏色各異，可食用的球形或莖部有青色、白色或紫色。無論外皮是甚麼顏色，切開之後芥蘭頭仍然是淡白色的。

當造期：屬冷季農作物，以初秋至春天的品質最佳。

預備：不論是生吃或熟食，緊記先去皮。芥蘭頭底部厚硬部分屬於纖維外皮，同樣需要徹底去除，直至露出淺色爽脆食用部分為止。

食法：可以生食、做沙律及醃漬做酸菜。可以係主菜，去掉外皮，切片炒肉片、菜脯或臘味，芥蘭頭爽脆有咬口，味道清甜非常好食！

營養：一杯含有14%的每日所需的鉀，有助控制血壓；看含葡萄糖異硫氰酸鹽，可以預防某些癌症的植物化學物質。

Kohlrabi (pronounced "cole-rah-bee"), also known as German turnip, is a round, tuberous vegetable belonging to the brassica family: the same family as broccoli, cabbage, Brussels sprouts, cauliflower and kale.

In Season: This cool-weather crop is at its best from early fall through spring.

Prepare it: Snip off the leaf stems, trim off the base and top, then use a potato peeler or sharp knife to peel it as if it's an apple. Then thinly slice, chunk or cut into wedges. If you're using slices in a salad, blanch them first.

Cook it: Both raw and cooked. It is delicious steamed, sautéed, roasted, stuffed, creamed, in soup or stew, as well as countless other ways.

Nutirions: A 1-cup serving contains 14 percent of your daily requirement of potassium—which will help keep your blood pressure under control—along with glucosinolate, a phytochemical that may prevent some cancers.

認識韓國濟州島凸頂柑

SOMETHING ABOUT DEKOPONS FROM JEJU ISLAND

韓國柚子茶成行成市，如果你識飲識食，一定知道用濟州島凸頂柑 (Dekopon) 造的柚子茶才是最頂級。

濟州島有三大特產：柑橘、海產及黑毛豬。濟州柑在韓國更是國寶，去年南北韓恢復對話後，南韓軍方一連兩日出動軍機，空運200噸濟州柑到平壤，作為北韓九月送贈松茸的回禮。

South Korea's bottled citron teas (aka yoja teas) are sold everywhere throughout the country. Foodies like you should know that the citron tea made of Dekopons from Jeju Island is the cream of the crop.

All of the citrus fruits are from the family Rutaceae, or simply the rue family. Citrus trees are a kind of flowering plants yielding pulpy fruits under the generic name of pomelos, which are rich in a variety of species, including honey pomelos, grapefruits, tangerines, shatian pomelos, wendan pomelos and many others.

Jeju Island is best known for its citrus harvest, seafood and black pork. Jeju tangerines, in particular, are among the national treasures of Korea. After the inter-Korean summit held last year, South Korea's military force had airlifted 200 tons of tangerines from Jeju to Pyongyang for two straight days in return for North Korea's shipments of pine mushrooms last September.

凸頂柑最矜貴

TOP-OF-THE-RANGE

濟州島又以產自西歸浦一帶的凸頂柑最矜貴。

凸頂柑，又名「不知火」、「醜柑」、「醜八怪」等叫法。由日本人將清見和椪柑兩種品種的柑橘進行雜交，形成一種新的品種，昔日在韓國是御前貢品，相當駕勢！，我們常吃的橘子，它是芸香科下的柑橘屬的橘種，而芸香科下有超過160個屬，柑橘屬只是其中之一屬，另外是柑橘屬下面又分成柚、柑、橘、橙、檸檬等，形狀和味道都不太相同。

凸頂柑成熟期都是寒冬季節（每年11月至2月），而且當造期極短，柑皮皺，油亮光澤。底部渾圓，頭頂有個「篤」。皮薄果衣少，獨有清香，果肉豐滿，無渣無核，汁多濃郁，甜度非常高，通常會用來製成不同的醬料、食品或飲品。

Dekopons grown in Seogwipo of Jeju Island are at the premium end of the market.

Dekopon (generic name: shiranuhi or shiranui, ugly mandarin) is a seedless variety of citrus – the hybrid between a kiyomi and a ponkan cultivated by the Japanese. In the past, they were gifts presented to the royal rulers of Korea, indicating their importance in the national history of Korea.

The fruits are ripe for harvest during the coldest winter times (from November to February annually) and its golden harvest season is short. With a layer of rough, wrinkled and glowing skin, each dekopon has a distinctive bump at the top and a flat, round bottom. Characterized by a refreshing aroma, the seedless dekopons have a thin rind and mesocarp while their thick, fine-textured flesh is juicy, super sweet and strong in flavour. They are a common ingredient for different sauces, dishes and drinks.

Cammells Honey runs approximately 350 hives in the greater Auckland region. In the early spring, their bees pollinate the crops of kiwi-fruit, macadamia nut and even pumpkin growers. Hives are then moved into their summer spots, where they produce pure and delicious Manuka and Pasture honey. The mucilage

around chia seeds is the gel that helps us thicken our fruit filling, has a soothing effect in the intestinal tract and helps improve digestion

High fiber

and mucilage from the chia seeds help with the digestion of sugars, and together with the protein of chia, help bind and make the fruit filling shelf stable
