# Glass Caring Tips

## Prevent from Thermal Shock

---

- Allow glass to reach room temperature ; The thicker or heavier the item, the more time is needed.
- Warm the glass to equalize the temperature difference.
- Warm up the glass of uneven thickness develops various types of tension which lead to breakage.
- Spot heat in microwave oven may result in breakage too.

## Prevent from Impact Shock

---

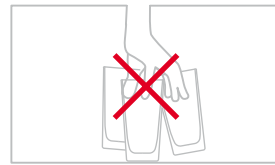

- Be gentle with your glass and try not to grip the glass too tightly

Avoid glass contact with bottle.

Never scoop with glasses.

Never handle with glass to glass contact.

Never pile glasses.

Never stack glasses.

Never put cutlery in glass.

## Correct Service & Function

---

- Pour water into goblet before adding ice
- Do not use beer glass for juice, soft drink, etc., as sugar coats the inside of glass affecting the carbonation of the beer
- Never place a hot drink glass on a cold metal surface
- Use cold glass for cold drink and hot glass for hot drink
- Handle glass by the base or stem, never the rim
- Use the correct glass for each type of drink to ensure that the consistency, appearance and even taste are at their best
- Don't put too many glasses on tray, and don't carry them in your hands

## Correct Cleaning by Hands

---

- Rinse the glass as soon as possible after use.
- Use non-abrasive cleaner; nylon scrub or sponge in warm water.
- Hold the glass by the bowl and do not twist the stem and bowl in opposite directions while you scrub or dry.
- Cushion your sink with dishcloth or rubber mat will help keeping glass from smashing into a hard sink bottom.
- Metallic magic ball; tiny stainless steel pellets remove all dirt, residue, sediment and stain from inside of decanter.

## Brighten cloudy glass

---

- Fill your sink with hot water and add 2 cups vinegar. Leave the glass soak in for an hour, the film should be gone. Using vinegar full strength will remove the film faster.

### Hard Water

- The hard water is basically base elements and compounds, i.e. lime, calcium, etc. which creates cloudy glass. The only way to get rid of base compounds is to use acid.
- Hard water can block the washer jets with lime scale and cause deposits on heating elements, which will reduce the cleaning efficiency. The way to ensure water remains soft is to regularly top up the reservoir with granular salt.

### Chemical Reaction

- It is a result of the oxide in the air stimulated by humidity and the oxide in the glass combining together. Hence, it creates a thin film on the surface of the glass.
