SINKKO

LOCKERS, CUBICLES AND BENCHES

أدى تاريخ شركة ويفز للتجارة والمقاولات ذ.م.م. وسينكو إلى تقديم التصميم كمتغير جديد.
فاليوم لم يعد يُحكم على الأشياء فقط من شكلها، بل أصبح يُحكم على عملية التصميم الكاملة التي تدخل في صناعتها.

WAVES TRADING & CONTRACTING W.L.L history and the history of SINKO has led to design being introduced as a new variable.
Today objects are no longer judged solely on their shape, but rather for the complete design process that goes into making them.

WELLNESS

تتطلع شركة ويفز للتجارة والمقاولات ذ.م.م إلى تفسير وإضافة ألوان حسب رغبات جميع المستخدمين وذلك لتلبية المطالب العامة.
لقد جلب ابتكار سينكو الحرفية في صناعة لوحات سميكة متينة HPL إلى العملية الصناعية.

WAVES TRADING & CONTRACTING W.L.L looking for the creativity interprets and colours the desires of all users so as to satisfy a demanding public.
SINKO innovation has then brought craftsmanship in working thick HPL panels to the industrial process.

SWIMMING POOL

لقد أعدنا تفسير منطقة الخدمة وأنشأنا كبائن بجدران من ألواح متينة HPL، سُمك 14 مم في حجرة رقم 1، مقاومة للحرائق وصُنعت الملحقات من الفولاذ المقاوم للصدأ أو الألومنيوم المعالج. كان الغرض توفير مساحات وتبسيط وضمان نظافة فاعلة من دون إلحاق الضرر بسطح الألواح، حتى في وجود عوامل ضغط خارجي.

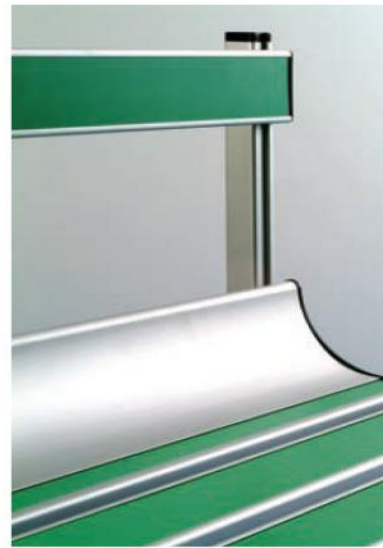

We have reinterpreted the service area, creating cabins with 14 mm thick HPL walls in Class 1 reaction to fire and accessories made from stainless steel or anodised aluminium.

The objective was to optimise spaces, simplify and guarantee effective cleaning without the possibility of affecting the surface of the panels, even in the presence of external stress factors.

BOX

ALUMINUM BENCHES

Made of aluminium sections anodized to 15 microns. Each of the components is resistant to oxide and rust proof. All staves are closed on both sides for maximum resistance and hygiene; they are also used for the hat rack, in order to avoid risks of deformations and improve their aesthetic appearance. The steel reinforced nylon joints, with a thickness of 8 mm, applied during the forming stage, guarantee, differently from all metal one, a perfect hold even in case of conditions of particular stress. The requested colour variations are obtained with the application of different laminate inserts. The nylon joints guarantee total structural sturdiness even in case of abnormal stress conditions caused by the users.

DOORS

The alternative "Sinko Professional" system provides a valuable solution to the problem of fitting doors in those environments where a high level of hygiene and wear resistance, without the need for maintenance, are of primary importance.

The 14 mm HPL laminate, perfectly rounded, is finished with a "GENEROUS" rounded aluminium case and is tested against chemical agents, steam and all other daily attacks.

Locks: The standard model uses "press to open", push-to-open or panic door locking systems. Other types of handles can be discussed with our technical department.

We manufacture standard doors with one or two shutters, with transom window, swinging or sliding doors, with or without under-arch.

The laminates come in a range of colours that enhances their elegance.

At Sinko everything has been designed to make a difference.

In Waves and Sinko world everything is designed to make a difference

في عالم ويفز وسينكو، صُمم كل شيء ليضيفي اختلافًا.
