Metal & Plastics

# Special Sourcing

Prototyping & Precision Parts

**URVALCO Suzhou Ltd.**

## WE SUPPORT. Special Sourcing.

Our team is continuously working on technical solutions for prototypes, small series and other special industrial needs. Our customers come from different business areas, but still have something "in common":

In addition to an attractive price, our customers attach great importance to availability with high demands on technical expertise, availability, flexibility, quality and speed. By express air freight, transports are also possible from Asia within 3-4 days.

Our competitive offer is as flexible as the requests we receive.

We process 3D CAD IGS or STP files for the inquiry, quotation and production of your special requirements - 2D drawings or concept sketches can also be the basis.

If CAD post-processing is required, we also offer that, as well as technical inspections or often measurement of the components using a 3D coordinate measuring machine (CMM).

## PRODUCT. Examples.

Your needs are our mission. We look forward to participating in your product development process.

If there are no special material ideas, we will make appropriate suggestions based on the function and application.

For this purpose, we like to use MS-TEAMS, SKYPE or the freely accessible video conferencing system "VooV". To ensure that your product meets your expectations in the end, it makes sense to use a little more coordination for the design beforehand.

Every product and every company has a very individual "DNA" – we adapt to this. As a result, we do everything we can to ensure that good coordination is reflected in smooth order processing.

We not only ensure the implementation of the requirements, but can also offer professional advice in the area of the design of alignment (3-2-1/XYZ) and clamping concepts, should this be desired.

## MANUFACTURING. Modern Equipment.

When things get too complex for others, we often come into play. Especially in the field of complex component production in lightweight construction, a number of suppliers of special lots reach their limits.

1. We manufacture from solid (St, Al, Me, Mg)
2. Fuel casting in small batches PP, PA, PE, ABS
2. We measure using 3D coordinate measurement

We check the manufacturability accordingly already in the inquiry phase. Before shipping, we ensure that the measurement protocols correspond to the state of affairs and the specifications.

We deliver locally and globally to where you, as our customer, would like to have special needs.

We take care of the packaging, shipping and customs clearance if you wish. Otherwise, the shipment will be made on a CIF basis to your authorized address. As shipping, there is the option of EXPRESS-DHL or sea freight as general cargo, if time permits.

## SPECIAL BATCHES. Efficient & Focus.

Often, there are neither the conditions nor the focus in a series production company to run in and produce complex individual pieces and small series. We can offer this focus, because these special needs are our offer.

Our project teams come from the automotive industry and are engineers and technicians who understand application technology and implement it in production.

A word on the subject of timelines and "lead times". Even if the production of the products themselves is quite fast, we are bound by the prevailing order situation.

If we can't promise dates, we say so.

## QUALITY. Planning & Follow-up.

When monitoring materials and production, we share progress with you through production and status reports.

For quality, production and packaging planning, we explicitly create project-related specifications, which are documented in image instructions.

Prior to shipment, agreed packaging instructions are determined to determine which are best suited to the respective freight route and the product.

The production of Al components is carried out on CNC systems with 3-axis and 5-axis.

## PRODUCTION. Clean & Lean.

We ensure that all teams, partners, suppliers, manufacturers involved in our company adhere to ethically correct conditions and that no questionable practices such as child labor or other practices that violate ethics are used.

We explain this in a manufacturer-export declaration explicitly added for each order.

The products are manufactured in a modern production facility with trained and motivated employees.

Modern management methods are just as much a part of production as a functioning and qualified quality management system.

Production takes place in 3-shift operation of a 7-day week and the company attaches just as much importance to employee satisfaction as to compliance with rest periods, vacation days and prescribed holidays.

## ASSEMBLY. 16940 / 9001 / 14001.

At the customer's request, we assemble various components. Here, too, all teams, partners, suppliers, manufacturers participate in ethically correct conditions and do not use questionable practices such as child labor or other practices that violate ethics. The working hours correspond to Western standards.

Employees receive regular training and actively participate in compliance with existing certificates – u.a. TS 16949, ISO 9001, ISO 14001.

## ORDER EXECUTION. On-site Visits.

To be on site in production again and again for the run-in or acceptance itself is rather normal. This is because every product is different and special care is the only way to keep an eye on costs for prototypes and small quantities. We all come from the industrial environment and have an eye for preventive action – we know that good coordination takes precautions.

## INJECTION MOLDING. CAD or DWG.

A wide variety of systems are available for different injection molding tasks. The toolmaking department can also design and manufacture medium-sized series of designs of varying complexity for small series in consultation. Production is carried out on systems of the HAITIAN brand.

## OUR TEAM. We get it done.

The production of prototypes in a product development process is important because "time-to-market" is a fixed factor for success in today's projects. We understand that.

Our team will do everything they can to provide you with the samples you need for your project.

We can't do magic either, but we say when there is a problem or certain expectations are difficult to fulfill – we fix it in the way we expect to get it done.

You can reach us by phone, e-mail, MS Teams, VooV, Zoom or WeChat.
