PARTNER WITH **U.S.** AS YOUR TERMINAL OF CHOICE

# Why Choose Our Terminals?

We all have that one gas station brand we trust to have clean bathrooms and a consistent experience—no matter the location. Why should fuel terminals be any different? Our 35+ owned and operated facilities, strategically located across nine states, are all held to the same level of excellence.

With a combined storage capacity of eight million barrels, **know** your drivers will never pull away dry. With dedicated, onsite team members, **know** your drivers will receive immediate support, preventing delays and rerouting. With **U.S. Energy®**, you can now **know before you go**.

SAFETY FIRST

# Safety First

**Our priority is safety:** for team members, customers, and partners. As a 12-time recipient of the International Liquid Terminals Association (ILTA) Safety Excellence award, feel confident your drivers are in good hands when they pull up to our racks.

*"The ILTA Safety Excellence Award is based on OSHA's safety standards for its terminal member injury and illness data. This is a great accomplishment made possible by our team members for putting safety at the forefront of all they do."*

DAN MORRILL | U.S. ENERGY

# Supportive Team

**No one likes going in blind or troubleshooting from afar.** That's why we provide driver training, onboarding resources, and an **onsite team** to support drivers at each of our terminals.

First time visiting? Benefit from an expedited carding process. Complications during off hours? Speak directly to our team and resolve issues faster.

*"One of our drivers needed to complete the initial carding process at your terminal. However, he was delayed and didn't arrive until right around 3 pm. Your team stayed late, made sure he was able to load, and let us start the process the same day we called to set it up. Many other terminals would not be nearly as accommodating."*

COMMITMENT TO SUSTAINABILITY

EFFICIENT SERVICE & DRIVER AMENITIES

# Efficient Service & Driver Amenities

**Measure your load time in minutes, not hours.** From card in to card out, we focus on site uptime and throughput turnaround. And while you wait, share the same amenities as our team members: from onsite restrooms to shared breakrooms and vending machines (and the occasional donut or kolache order).

*“One thing I really appreciate about U.S. Energy is how easy they make everything. From their card-in process that works across terminals to their online facility trainings, it’s all seamless. With them, I know there’s more to the relationship than just business. Their team genuinely wants to help drivers, accommodate our schedules, create a safe space for questions, and know us on a personal level. It’s this kind of support that makes me look forward to stopping at a U.S. Energy terminal.”*

**RODNEY (RALO) FORD | JH SEALE & SON**

### DID YOU KNOW?

Nearly **80%** of our terminals that require vapor control have been updated to include vapor recovery units. We've also installed variable frequency drives, which are energy-saving motor drives, at over **31%** of our large pumps and installed solar panels at two of our terminals.

*U.S. Energy's solar project at its Fort Worth North, Texas terminal offsets ~50% of the site's annual electrical energy load.*

# Commitment to Sustainability

## **We're Finding a Better Way**

**to operate**—for our customers, communities, and the environment. From vapor recovery units to variable frequency drives and solar fields, we continue to implement sustainable measures across our terminal network.

---

*"Sustainability is a key consideration for our company. This includes monitoring our energy use and associated emissions as well as growing our data-backed approach to drive future efficiencies that lower our environmental impact."*
