Bitcoin slipped about 8% last week, but the dip quickly attracted fresh buyers, showing that bargain hunters are stepping back in. Early in the new week, bulls are pushing to reclaim the \$88,000 level. Spot BTC ETFs saw \$238.4 million in inflows on Friday, according to Farside Investors, suggesting institutional demand is waking up again. Analysts at Swissblock noted that their risk-off signal is easing, which hints that the worst phase of forced selling may be behind us. They added that fading selling pressure and a weaker second wave would strengthen the case for a more reliable bottom.

Still, not all analysts see smooth sailing. BitMEX co-founder Arthur Hayes said BTC could continue chopping below \$90,000 and even slide into the low-\$80,000 region, though he expects the \$80,000 level to hold as major support.

Japan is also tightening oversight on the crypto sector. According to local reports, the Financial Services Agency will soon require exchanges to hold liability reserves to better protect customers from hacks and unexpected losses. The move comes after several global security breaches, with the FSA expected to publish formal recommendations this week. Japan remains one of the world's most active crypto markets, with nearly 12 million registered accounts.

LETTER

BTC is attempting a recovery after having plunged to \$80,600 on Friday, but higher levels are likely to attract sellers. The 20-day EMA (\$94,620) is likely to act as a major hurdle on the upside. If the Bitcoin price turns down sharply from the 20-day EMA, it suggests that the sentiment remains negative and the bears are selling on rallies. That heightens the risk of a drop to the \$73,777 level, where the bulls are expected to step in. Buyers will have to push and maintain the price above the 20-day EMA to gain strength. The BTC/USDT pair may then climb to the psychological level of \$100,000.

Ether is attempting to start a recovery, which may encounter significant resistance in the zone between the 20-day EMA (\$3,148) and \$3,350. If the price turns down from the overhead zone, the bears will attempt to resume the downtrend. A break and close below \$2,623 signals the start of the next leg of the downmove to \$2,400 and then to the \$2,111 level. Instead, if buyers thrust the Ether price above \$3,350, the ETH/USDT pair could reach the 50-day SMA (\$3,659). A close above the 50-day SMA suggests the bulls are back in the game.

XRP rebounded off the support line on Saturday, indicating that the bulls are trying to keep the price inside the descending channel pattern. The bears are unlikely to give up easily and will try to halt the relief rally at the moving averages. If the price turns down sharply from the moving averages, the sellers will again attempt to pull the XRP/USDT pair to \$1.61.

On the contrary, a break above the moving averages could push the price to the downtrend line. Buyers will have to pierce and sustain the XRP price above the downtrend line to suggest a potential trend change.

Trader's Outlook

BTC is stabilizing but still vulnerable unless it reclaims the 20-day EMA; upside opens only above \$95K, with \$100K as the next magnet. ETH is stuck in a heavy resistance zone and needs a break above \$3,350 to avoid deeper downside. XRP is trying to hold its channel support, but bulls must reclaim the moving averages to flip momentum. Overall, market sentiment is improving slightly, but conditions remain fragile; traders should stay nimble and watch key resistance levels closely.

Lastly please check out the advancement's happening in the cryptocurrency world

Enjoy the issue!

CRYPTONAIRE WEEKLY

Cryptonaire Weekly is one of the industry's longest-running and most trusted sources for cryptocurrency news, market insights, and blockchain analysis. Created to support our Platinum Crypto Academy clients and global subscribers, the magazine delivers clear research, actionable technical analysis, and strong thought leadership across the digital asset space.

Each week, we provide readers with in-depth articles, project updates, and market commentary that cover the rapidly evolving world of blockchain and Web3. For traders, investors, developers, and entrepreneurs, navigating this fast-changing environment can be challenging. Our mission is to simplify that journey and help readers make informed, confident decisions.

Since our launch in 2017, we've covered every major cycle in crypto from Bitcoin's early rally past **\$20,000 in 2017** to its sharp correction near **\$3,200 in 2018**, marking one of the strongest bear markets in the sector's history. We followed Bitcoin's surge to **\$69,000 in 2021** and its deep pullback to around **\$16,000 in 2022** during a period of global uncertainty and high-profile exchange failures. Most recently, we've tracked Bitcoin's powerful 2025 resurgence as it broke into six-figure territory, hitting levels above **\$123,000** and reaffirming long-term market confidence.

Our **Platinum Crypto Academy** community includes thousands of students and traders worldwide. Over time, **Cryptonaire Weekly** has grown to more than **250,000 active subscribers** and a **social reach of over 1.2 million followers across multiple platforms and community groups**. Through our research-driven insights and strategic relationships, we've also helped **350+ blockchain and crypto projects gain** meaningful traction and visibility in the global market.

For anyone looking to stay informed, identify opportunities, and understand the technologies shaping the future of finance, Cryptonaire Weekly remains a trusted and valuable resource.

WEEKLY CRYPTOCURRENCY MARKET ANALYSIS

Hello, welcome to this week's 403rd edition of Cryptonaire Weekly Magazine. The global crypto market cap is \$3.02 trillion, down 90 billion since last week. The total crypto market trading volume over the last 24 hours is \$155.13 billion, which makes a 21.49% increase. The Fear & Greed index is 15% Extreme Fear and the Altcoin season index is 23%. The largest gainers in the industry right now are Options and XRP Ledger Ecosystem cryptocurrencies.

Bitcoin's price has decreased by 3.68% from \$91,100 last week to around \$87,650 and Ether's price has decreased by 3.48% from \$3,015 last week to \$2,910 Bitcoin's market cap is \$1.75 trillion and the altcoin market cap is \$1.27 trillion.

Bitcoin slipped about 8% last week, but the dip quickly attracted fresh buyers, showing that bargain hunters are stepping back in. Early in the new week, bulls are pushing to reclaim the \$88,000 level. Spot BTC ETFs saw \$238.4 million in inflows on Friday, according to Farside Investors, suggesting institutional demand is waking up again. Analysts at Swissblock noted that their risk-off signal is easing, which hints that the worst phase of forced selling may be behind us. They added that fading selling pressure and a weaker second wave would strengthen the case for a more reliable bottom.

Still, not all analysts see smooth sailing. BitMEX co-founder Arthur Hayes said BTC could continue chopping below \$90,000 and even slide into the low-\$80,000 region, though he expects the \$80,000 level to hold as major support.

Japan is also tightening oversight on the crypto sector. According to local reports, the Financial Services Agency will

soon require exchanges to hold liability reserves to better protect customers from hacks and unexpected losses. The move comes after several global security breaches, with the FSA expected to publish formal recommendations this week. Japan remains one of the world's most active crypto markets, with nearly 12 million registered accounts.

Crypto investment products have now recorded almost \$5 billion in outflows over the past month. Last week saw another \$1.94 billion exit ETPs, though late-week inflows of \$258 million suggest early signs of improving sentiment. Meanwhile, NYSE Arca has approved the listing of Grayscale's new Dogecoin and XRP ETFs, with trading set to begin Monday—part of a broader wave of new speculative crypto ETFs coming to market.

Market tensions rose over the weekend as the Bitcoin community reacted to reports that MSCI may exclude crypto treasury companies like Strategy from major equity indexes starting in 2026. Bitcoin advocates called for boycotts against JP Morgan after the bank circulated the research note. Traders warn that index exclusion could trigger forced selling by institutional funds, potentially increasing volatility across crypto-linked equities.

Market Outlook

BTC is trying to stabilize above \$85K–\$88K, but the trend remains fragile until bulls reclaim the 20-day EMA near \$100K. ETH is lagging but showing signs of forming a base around \$3K. Altcoin sentiment is cautious, though the launch of new ETPs could inject fresh short-term liquidity. Overall, traders should expect continued volatility but improving conditions if ETF inflows keep building through the week.

Percentage of Total Market Capitalization (Domnance)

BTC	57.91%
ETH	11.64%
USDT	6.10%
BNB	3.93%
SOL	2.56%
Others	17.86%

PRESS RELEASE

PROPW UNVEILS REDESIGNED PROFESSIONAL TRADING INTERFACE WITH NEW DYNAMIC FUNDING MODEL

PropW, the world's first proprietary trading platform dedicated exclusively to **cryptocurrency markets** and part of the CoinW ecosystem, today announced a major platform upgrade. The update introduces a redesigned professional trading interface and a new dynamic funding model, creating a high-efficiency, flexible environment that empowers traders to access capital and maximize their trading potential.

Enhanced Professional Trading Experience

PropW's **proprietary trading** model allows traders to focus on strategy and performance while the platform assumes market risk. The upgraded interface features a modular, drag-and-resize layout, integrated professional tools with real-time data, and seamless cross-device compatibility across desktop, mobile, and tablet, ensuring a smooth and efficient trading workflow.

"At PropW, innovation starts with understanding our traders," said Sonic Hoo, Head of PropW. "We are creating more than a platform — it's a professional space where skilled traders can thrive and amplify their potential."

Dynamic Funding Model for Flexible Capital Access

The new funding framework offers tailored pathways for traders of all experience levels:

Pro Mode: For experienced traders, evaluation cycles as short as six days allow access to up to \$200,000 in trading capital, with reduced profit targets and competitive entry fees for faster qualification.

Standard Mode: Designed for emerging traders, starting at \$29 USD, providing access to trading education and a \$2,000 live account. Tiered profit targets encourage steady skill development.

Fair and Sustainable Trading Ecosystem

PropW's Comprehensive Professional Trading Competency (CPTC) evaluation model rewards genuine skill with full strategic freedom. Traders retain up to 90% of profits and receive a full assessment fee rebate after their first successful withdrawal. In its first year, PropW funded over 3,000 traders with \$88 million in capital and distributed \$1.66 million in profits. The platform was recently named "Most Trusted and Most Advantageous Prop Firm" by FundedMatch.

Looking Ahead

PropW will continue to refine its platform and support infrastructure, setting a professional and equitable standard for cryptocurrency proprietary trading worldwide.

About PropW

PropW is the world’s first proprietary trading platform designed specifically for cryptocurrency traders. It enables traders to access platform-provided capital and showcase their trading capabilities through a structured evaluation system. Top-performing traders may earn up to 90% profit share. As an integral part of the CoinW ecosystem,

PropW is committed to creating a supportive and growth-oriented trading environment for traders worldwide—empowering them to achieve both financial success and personal breakthroughs.

PRESS RELEASE

UK FINANCIAL LTD MARKS A GLOBAL MILESTONE AS MCAT EVOLVES INTO SMCAT UNDER ERC-3643 COMPLIANCE

UKFinancialLtd announced the historic transformation of MayaCat. The popular gold-silver backed meme token MCAT officially evolves into SMCAT. This marks the first time any meme coin achieves full ERC-3643 regulatory compliance. SMCAT now functions within established compliance frameworks recognized globally. It incorporates built-in KYC verification, investor whitelisting, and transfer restrictions through its smart contract design.

Currently, no ERC-3643 compliant security tokens trade on any major exchange worldwide. Most platforms fear the legal responsibilities associated with listing regulated security-classified tokens. Major exchanges publicly advocate for regulation while avoiding fully compliant token architectures. This creates significant market barriers despite industry demands for regulatory clarity. SMCAT's compliant infrastructure represents a breakthrough addressing this critical gap directly.

Built on ERC-3643 standards, SMCAT incorporates sophisticated regulatory controls throughout its architecture. Three verified smart contracts operate transparently on Etherscan for public verification. The main token contract, compliance module, and identity registry maintain SEC-ready status.

View the verified SMCAT Main Token Contract:
<https://etherscan.io/token/Ox4198fa66779c1ee49c10adfb378fa1d5e3314d5c>

View the verified SMCAT Compliance Contract:
<https://etherscan.io/address/Oxdfcee473cedf5f388150c2f53528625f277164fb>

View the verified SMCAT Identity Registry Contract:
<https://etherscan.io/address/Ox46e4a2327b0a851acd824a268744da44342fe842>

This transparency allows independent verification of the token's regulatory architecture.

UK Financial Ltd slashed SMCAT supply by 88.5%, dropping total tokens to 50 million. The reduction delivered existing holders a 3,900% increase in ownership concentration and value. The company eliminated 88.5% of outstanding tokens while maintaining asset backing through Maya Preferred's reserves. This approach establishes a new standard for responsible meme coin evolution.

The company anticipates SMCAT will establish new standards for asset-backed securities. . Last month, the company introduced SMPRA, converting its flagship Maya Preferred (MPRA) token into a regulated digital security. The rapid deployment demonstrates the firm's systematic approach to compliance-ready token development. The company believes traditional institutions will increasingly adopt compliant blockchain infrastructure. Management expects the token creation platform model will accelerate institutional participation significantly.

“We didn’t just create another token,” stated James Dahlke, President & CEO of UK Financial Ltd and The Maya Preferred Project. “We created a business model that manufactures compliance, security, and gold-backed value — one token at a time.”

UKFinancialLtd simultaneously upgraded its MayaPro Wallet to Progressive Web Application status. Users can download it directly to smartphones with new staking and purchasing features. The company expects these enhancements will transform MayaPro into a complete exchange platform.

About UK Financial Ltd

Founded in 2018, UK Financial Ltd is a London-based financial technology company specializing in asset-backed digital instruments, regulatory technology, and blockchain integration. The firm pioneers the convergence of traditional finance with digital asset innovation through its Maya Preferred Project ecosystem. UK Financial Ltd develops ERC-3643 compliant security tokens, tokenized reserve banking systems, and gold-backed digital assets. The company’s portfolio includes MPRA, SMPRA, WMPRA, RPWMPRA, and SMCAT tokens, all supported by verifiable precious metal reserves. UK Financial Ltd maintains transparent on-chain operations with holdings secured in its Irrevocable Treasury Vault for real-time public verification.

ADVANCEMENTS IN THE CRYPTOCURRENCY WORLD

BITCOIN ETF OUTFLOWS HIT \$1.2B EVEN AS WALL STREET DEEPENS ITS CRYPTO BETS

Bitcoin ETF outflows show institutions are trimming risk, not abandoning crypto, as trading stays off-chain and liquidity begins to improve.

Bitcoin ETFs experienced their third-largest outflow last week.

Still, BTC and ETH prices rebounded, trimming recent losses that stemmed from macro uncertainties.

Wall Street's interest in crypto remains strong, with major firms like BlackRock and Fidelity expanding their ETF offerings.

Bitcoin BTC \$86,200.94
exchange-traded funds (ETFs) just saw their third-largest weekly outflow on record, even as Wall Street deepens its crypto bets.

More than \$1.2 billion exited spot Bitcoin funds last week, joined by \$508 million from Ethereum products, while Solana ETFs drew \$137 million in new money, according to data curated by SoSoValue.

The outflows came even as bitcoin rebounded 4.4 % in 24 hours to \$106,172 and Ethereum gained 7.2 % to \$3,617, recovering part of their losses from the U.S. government shutdown and macro uncertainty.

Market observers argue the drawdown in BTC's price reflects position-trimming after one of the strongest inflow streaks since early 2024, rather than outright capitulation.

As CoinDesk previously reported, liquidity indicators such as the SOFR-EFFR spread have tightened sharply from their late-October highs, signaling easing financial conditions. The dollar index's rally has stalled, and borrowing from the Federal Reserve's standing repo facility has dropped to zero. Taken together, these factors support renewed risk-taking in financial markets.

Wall Street's interest in crypto remains intense. BlackRock's Bitcoin ETF continues to lead inflows for the year, while Fidelity and VanEck have expanded their spot product lines. Yet most of that institutional participation still happens off-chain.

NYSE approves Grayscale DOGE and XRP ETFs, clearing launch for Monday

NYSE Arca has greenlit the launch of Grayscale's exchange-traded funds tied to Dogecoin and XRP, with the products set to go live for trading on Monday.

The New York Stock Exchange has approved the listing of Grayscale's Dogecoin and XRP exchange-traded funds (ETFs), teeing up both to launch on Monday.

NYSE Arca, a subsidiary of the exchange, filed with the Securities and Exchange Commission on Friday to certify "its approval for listing and registration" of the Grayscale XRP Trust ETF (GXRP) and the Grayscale Dogecoin Trust ETF (GDOG).

Bloomberg senior ETF analyst Eric Balchunas posted the NYSE's approvals to X on Sunday, and said Grayscale's ETF tied to Chainlink LINK\$12.44 will follow in the next week or so.

"Grayscale Dogecoin ETF \$GDOG approved for listing on NYSE, scheduled to begin trading Monday. Their XRP spot is also launching on Monday," he said. "\$GLNK coming soon as well, week after I think."

The signing off by the NYSE marks the final approval needed for Grayscale's spot Dogecoin DOGE \$0.14 Dogecoin Change (24h) 0.10% Market Cap.

[Read more...](#)

Bitcoin Logs Longest Losing Streak Since 2024 as Fed Repricing Fuels Cautious Rebound

Bitcoin's longest weekly slump in over a year puts it on track for its worst quarter since 2018, with a potential bull trap looming.

A key spot market metric has spiked to its second-highest level this year, signaling a

potential bottom. Options traders are hedging for more downside, loading up on puts in the \$85,000 to \$80,000 range. Bitcoin may see a potential bull trap below \$80,000 before a year-end recovery, Decrypt was told.

Bitcoin has notched its fourth consecutive weekly loss, marking its longest downtrend since June 2024, even as it begins clawing back last week's losses.

Price action for the world's largest digital asset is on track for its fourth-quarter performance to be its worst since 2018, with a current loss of 24.43%.

"I expect a rough ride into Christmas," Sean Dawson, head of research at options analytics platform Derive, told Decrypt.

Despite the gloom, one on-chain metric suggests underlying demand.

The aggregate spot bid-ask delta at 10% depth has spiked to the second-highest level in 2025, indicating increased dip-buying activity and potential absorption of selling pressure.

The last time this indicator spiked after a sustained downtrend in March and April, it helped form a bottom that catalyzed a 64% bull run.

[Read more...](#)

Bitcoin slipped about 8% last week, but the dip quickly attracted fresh buyers, showing that bargain hunters are stepping back in. Early in the new week, bulls are pushing to reclaim the \$88,000 level. Spot BTC ETFs saw \$238.4 million in inflows on Friday, according to Farside Investors, suggesting institutional demand is waking up again. Analysts at Swissblock noted that their risk-off signal is easing, which hints that the worst phase of forced selling may be behind us. They added that fading selling pressure and a weaker second wave would strengthen the case for a more reliable bottom.

Still, not all analysts see smooth sailing. BitMEX co-founder Arthur Hayes said BTC could continue chopping below \$90,000 and even slide into the low-\$80,000 region, though he expects the \$80,000 level to hold as major support.

Japan is also tightening oversight on the crypto sector. According to local reports, the Financial Services Agency will soon require exchanges to hold liability reserves to better protect customers from hacks and unexpected losses. The move comes after several global security breaches, with the FSA expected to publish formal recommendations this week. Japan remains one of the world's most active crypto markets, with nearly 12 million registered accounts.

Crypto investment products have now recorded almost \$5 billion in outflows over the past month. Last week saw another \$1.94 billion exit ETPs, though late-week inflows of \$258 million suggest early signs of improving sentiment. Meanwhile, NYSE Arca has approved the listing of Grayscale's new Dogecoin and XRP ETFs, with trading set to begin Monday—part of a broader wave of new speculative crypto ETFs coming to market.

Market tensions rose over the weekend as the Bitcoin community reacted to reports that MSCI may exclude crypto treasury companies like Strategy from major equity indexes starting in 2026. Bitcoin advocates called for boycotts against JP Morgan after the bank circulated the research note. Traders warn that index exclusion could trigger forced selling by institutional funds, potentially increasing volatility across crypto-linked equities.

Market Outlook

BTC is trying to stabilize above \$85K–\$88K, but the trend remains fragile until bulls reclaim the 20-day EMA near \$100K. ETH is lagging but showing signs of forming a base around \$3K. Altcoin sentiment is cautious, though the launch of new ETPs could inject fresh short-term liquidity. Overall, traders should expect continued volatility but improving conditions if ETF inflows keep building through the week.

BTC is attempting a recovery after having plunged to \$80,600 on Friday, but higher levels are likely to attract sellers. The 20-day EMA (\$94,620) is likely to act as a major hurdle on the upside. If the Bitcoin price turns down sharply from the 20-day EMA, it suggests that the sentiment remains negative and the bears are selling on rallies. That heightens the risk of a drop to the \$73,777 level, where the bulls are expected to step in.

Buyers will have to push and maintain the price above the 20-day EMA to gain strength. The BTC/USD pair may then climb to the psychological level of \$100,000.

Ether is attempting to start a recovery, which may encounter significant resistance in the zone between the 20-day EMA (\$3,148) and \$3,350. If the price turns down from the overhead zone, the bears will attempt to resume the downtrend. A break and close below \$2,623 signals the start of the next leg of the downmove to \$2,400 and then to the \$2,111 level.

Instead, if buyers thrust the Ether price above \$3,350, the ETH/USD pair could reach the 50-day SMA (\$3,659). A close above the 50-day SMA

suggests the bulls are back in the game.

XRP rebounded off the support line on Saturday, indicating that the bulls are trying to keep the price inside the descending channel pattern. The bears are unlikely to give up easily and will try to halt the relief rally at the moving averages. If the price turns down sharply from the moving averages, the sellers will again attempt to pull the XRP/USD pair to \$1.61.

On the contrary, a break above the moving averages could push the price to the downtrend line. Buyers will have to pierce and sustain the XRP price above the downtrend line to suggest a potential trend change.

BTC is stabilizing but still vulnerable unless it reclaims the 20-day EMA; upside opens only above \$95K, with \$100K as the next magnet. ETH is stuck in a heavy resistance zone and needs a break above \$3,350 to avoid deeper downside. XRP is trying to hold its channel support, but bulls must reclaim the moving averages to flip momentum. Overall, market sentiment is improving slightly, but conditions remain fragile traders should stay nimble and watch key resistance levels closely.

Pump.Fun Cashes Out \$436.5M USDC, Token Slumps 24% in 1 Week

The funds are proceeds from Pump.fun's June private sale of PUMP tokens to institutions.

Solana-based meme coin launchpad Pump.fun has withdrawn \$436.5 million USDC since October 15, according to on-chain analysis.

Data accumulated by crypto analyst EmberCN revealed that Pump.

fun team has moved 405 million USDC into Kraken in the past week alone. During the same period, the project transferred 466 million USDC from Kraken to Circle.

The move is "very likely" to be a "withdrawal," the analyst noted.

Per EmberCN, the funds are proceeds from Pump.fun's June private sale of PUMP tokens to institutions. Pump.fun launched its own token, PUMP, in July through an initial coin offering that raised \$500 million in under 12 minutes.

Despite the recent massive USDC transfers, the official X account of Pump.fun has remained silent for over a week, failing to provide any updates.

"Cash Out" Operation Triggers Community Backlash
Since October 15, Pump.fun has deposited 436.5 million USDC into Kraken, followed by 537.6 million USDC flowing from Kraken to Circle, Arkham data notes.

[Read more...](#)

SEC is done with crypto: Removes all mention from its agenda for 2026

The SEC's 2026 priorities drop all references to crypto, signaling a deliberate shift toward broader tech and compliance risks.

SEC exam staff will not treat crypto as a stand-alone risk in its fiscal 2026 priorities, marking a clear departure from the agency's approach in 2024 and 2025.

The Division of Examinations' 17-page "2026 Examination Priorities" lays out focus areas for investment advisers, funds, broker-dealers, and market utilities, and reiterates cross-cutting work on information security, operational resiliency, identity theft, the amended Regulation S-P, and anti-money laundering.

In the section on emerging financial technology, the document centers on automated advice, algorithms, and AI, including whether tools produce compliant recommendations.

According to the SEC's report, there is no mention of crypto, crypto assets, digital assets, virtual currency, or blockchain across any section, including areas where the topic previously appeared, such as fintech and AML.

The omission is notable because the 2024 and 2025 priorities explic-

itly labeled crypto as a focus. According to the SEC's 2024 priorities, "Crypto Assets and Emerging Financial Technology" had a named section stating examinations would prioritize firms active in crypto assets and related products.

The 2025 priorities again referenced crypto assets alongside AI, cybersecurity and AML as critical risk areas, with law firm summaries emphasizing sustained attention to firms offering crypto-related services.

UK Financial LTD has captured global attention by winning the Global Excellence Award for Gold-Backed Digital Assets. The recognition celebrates years of pioneering work in real-world asset-backed blockchain technology.

As we all know, most crypto projects operate in unregulated territory. UK Financial LTD chose a different path. They built an ecosystem designed to function across both cryptocurrency exchanges and U.S. securities markets. This requires meeting strict compliance standards while maintaining blockchain innovation. The British company has successfully bridged these two worlds. Their work addresses the industry's biggest challenge of creating digital assets that institutions can trust.

Inside the Award-Winning Maya Preferred Project

The Maya Preferred Project began in 2018 as one of the earliest gold-backed token initiatives worldwide. UK Financial LTD launched this ecosystem with a commitment to tangible asset backing over speculation. In June 2019, the company made an unprecedented announcement: transferring 21 million MPRA tokens into escrow accounts to guarantee support for Bitcoin with their gold and silver reserves in the event of a market crash. This matched Bitcoin's 21 million coin supply exactly, creating a safety net for cryptocurrency holders.

These tokens remained locked in escrow for over six years, untouched since the original 2019 transaction. However, strategic priorities evolved as the digital asset landscape matured. In September 2025, the Board of Directors voted to immediately end the original 2019 agreement of backing Bitcoin with gold. The decision stemmed from a clear insight: strengthening their own ecosystem created more value than insuring Bitcoin. Those 21 million MPRA tokens were redirected to strengthen the Maya Preferred ecosystem directly.

The pivot reflected broader strategic thinking shaped by institutional demand signals. UK Financial observed that major capital allocators wouldn't enter unregulated crypto markets regardless of asset backing. Gold reserves alone couldn't solve the trust deficit institutional investors faced. Building SEC-compliant infrastructure became the path to unlock billions in institutional capital. The company channeled resources into developing SMPRA and SMCAT as fully regulated tokens using ERC-3643 standards. Both tokens incorporate KYC verification, whitelisting, and compliant transfer restrictions built directly into their smart contracts. This compliance-first approach positions Maya Preferred where institutions can actually participate rather than just observe from the sidelines.

Why Major Exchanges Fear Listing Regulated Security Tokens?

The cryptocurrency industry faces a fundamental contradiction that stifles progress. Major exchanges publicly advocate for clear regulations and institutional adoption. Behind closed doors, these same platforms actively avoid listing fully compliant security tokens. The reason is straightforward: legal responsibility.

ERC-20 tokens can be freely transferred between any wallets with broad compatibility. Exchanges face minimal liability when listing these unregulated assets. Security tokens operating under ERC-3643 carry completely different obligations. Exchanges listing regulated securities potentially assume responsibilities similar to traditional broker-dealers. This includes KYC enforcement, transaction monitoring, and regulatory reporting requirements. Most crypto platforms lack the infrastructure, licensing, or willingness to accept these burdens.

The gap between rhetoric and action creates significant market barriers. While ERC-1400 and ERC-3643 are designed with regulation in mind, they lack the developer support and exchange compatibility of ERC-20. Institutional investors demand compliant tokens but cannot access them on major trading venues. This chicken-and-egg problem has stalled the regulated security token market for years.

Why Is the UK Financial Building What Others Won't?

UK Financial LTD chose courage over caution by embracing full regulatory compliance. While competitors wait for perfect conditions, this company built the infrastructure institutions actually need. They developed SMPRA and SMCAT as the first ERC-3643 tokens designed for eventual major exchange listings. This decision required accepting the complexity that most projects deliberately avoid.

The technical implementation demonstrates a serious commitment. Both tokens incorporate automated KYC verification, investor whitelisting, and programmable transfer restrictions. Every transaction validates compliance rules before execution. The smart contracts prevent ineligible transfers automatically without manual oversight. This infrastructure operates transparently with public wallet visibility for real-time verification.

SMCAT's creation made history as the first meme

coin to achieve full regulatory compliance. This bridges retail appeal with institutional-grade asset backing. Traditional meme coins offer speculation without substance. SMCAT combines viral potential with verifiable precious metal reserves and regulatory frameworks. The company transformed a typically frivolous token category into a compliant security. This bold approach earned UK Financial LTD the Global Excellence Award. The recognition validates their pioneering work in regulated digital asset ecosystems.

The Token Family Structure

MPRA/SMPRA

MPRA operates as the primary value anchor within the Maya Preferred ecosystem. The tokenomics reveal extreme scarcity with 23 million total supply and just 1 million circulating publicly. This extreme scarcity creates remarkable valuation dynamics in the marketplace. The company self-reports a market capitalization exceeding \$210 trillion, positioning it among the world's highest-valued tokens. SMPRA represents the evolved version designed for SEC compliance and regulatory approval.

WMPRA

WMPRA functions as the Ethereum-wrapped version of MPRA for enhanced blockchain interoperability. The token maintains strict 1:1 price parity with MPRA at all times. This wrapped format allows Maya assets to operate seamlessly across different blockchain networks.

RPWMPRA

RPWMPRA represents a specialized retirement wrapper offering extraordinary leverage on MPRA price movements. The token provides 400,000x leverage exposure to underlying MPRA/SMPRA valuations. This amplification mechanism targets long-term wealth preservation through structured ecosystem participation. This structure allows participants to preserve value in gold-backed digital assets under institutional protection. The leverage isn't about trading risk but about retirement account growth. It creates accessible entry points for long-term believers.

MCAT/SMCAT

MCAT launched as the world's first gold and silver backed meme token. Unlike typical meme coins built purely on hype, MCAT carries real precious metal reserves. The October consolidation transferred 21 million MPRA and WMPRA tokens into backing MCAT directly. SMCAT represents the evolved regulated version achieving full ERC-3643 compliance.

UKFL

UKFL consolidates UK Financial LTD's institutional holdings into a single corporate reserve token. This provides direct exposure to the company's organizational value and asset base. Institutional investors access corporate-level backing through UKFL ownership rather than individual tokens. The token represents equity-like exposure to the entire Maya ecosystem's growth.

Trading & Market Presence

All Maya Preferred tokens trade actively on Catex Exchange with multiple trading pairs available. Investors can access MPRA, WMPRA, MCAT, and other ecosystem tokens through USDT pairings. Ethereum and Bitcoin pairs provide additional liquidity options for diverse trading strategies. This multi-pair structure creates flexible entry and exit points for various investor preferences. However, Catex represents just the beginning of UK Financial's exchange ambitions. The company aims to list on major Tier-1 exchanges within the next three years.

Innovative Projects Within the Maya Ecosystem

Maya Preferred Reserve Protocol (RP)

The Maya Preferred Reserve Protocol is a tokenized reserve bank specifically for gold-backed assets. The Reserve Protocol functions as a complete on-chain financial institution. It offers lending services, asset growth mechanisms, and yield distribution through smart contracts. This infrastructure bridges conventional reserve banking with blockchain's transparency and accessibility advantages. Furthermore, the RP has institutional-grade auditability that surpasses traditional banking transparency standards.

MayaFund (MFUND)

MayaFund is designed to hold, manage, and regulate the ecosystem's assets. MFUND integrates directly with UK Financial LTD's corporate wallet infrastructure for complete transparency. The fund merges all tokenized assets into a single transparent structure. The mutual fund-style structure appeals to traditional investors seeking familiar frameworks.

Maya Black Reserve Card

The Maya Black Reserve Card advances toward launch as a revolutionary gold-backed payment instrument. This hybrid credit and charge card offers unlimited spending power secured by physical gold reserves.

The card delivers 4-6% cashback on all purchases with premium merchant privileges attached. Exclusivity defines the rollout strategy with invitation-only access for Maya ecosystem token holders first.

MCOIN, MPRO Wallet, and Digital Fantasy Sports (DFS)

UK Financial LTD is relaunching three foundational projects that shaped the company's early development. MayaCoin (MCOIN) returns as a gold-backed cryptocurrency with enhanced institutional security protocols. The MayaPro Wallet (MPRO) reimagines digital asset management through intuitive interfaces supporting multi-token ecosystem participation. Digital Fantasy Sports (DFS) transforms fantasy gaming through blockchain-based transparency and verifiable fair play.

Team Behind Maya Preferred

James Dahlke, President and CEO of UK Financial Ltd, articulates the company's regulatory commitment clearly. "My immediate goal is to list both of our ERC-3643 tokens and convert our entire ecosystem into SEC-Ready, gold-backed, and ERC-3643-compliant assets," Dahlke stated. He focuses on building transparency that mirrors the reporting standards of listed firms. This vision drives every strategic decision the company makes. Richard Crespo, Vice President, reinforces the trust-building mission. "Our mission has always been to bridge trust between real assets and digital finance," Crespo explained. The company's leadership proves this commitment through newly issued documentation confirming all eight gold mines in Mexico.

The management team operates with remarkable discipline that sets industry standards. No executive has taken a salary or sold tokens throughout the company's eight-year history. This zero-compensation model eliminates conflicts of interest completely. The leadership owns significant token positions but cannot liquidate for personal gain.

Conclusion

UK Financial LTD's Global Excellence Award validates years of pioneering work in gold-backed digital assets. The company built what the industry desperately needs: fully compliant, asset-backed tokens. Follow their journey as they lead the global shift toward transparent, regulated blockchain finance.

G20 Leaders' Declaration Drives Unified Crypto Oversight With Stablecoin and DeFi Standards

Securitize and Binance have jointly announced on Friday that the BlackRock USD Institutional Digital Liquidity Fund (BUIDL) will now be accepted as off-exchange collateral for trading on Binance.

Global crypto regulation is set to accelerate as the G20 rallies behind sweeping oversight, unified standards, and next-generation financial-technology governance poised to reshape digital-asset markets worldwide.

G20 Sets Unified Path for Digital Asset Oversight
The G20 issued its Leaders' Declaration on Nov. 22 at the South Africa summit, setting a unified direction

for global oversight of digital assets. The document outlines coordinated approaches to crypto assets, stablecoins, and financial-technology risks that may influence regulatory expectations across major economies.

"We emphasise the need to intensify global efforts to prevent the misuse of legal entities, foster increased asset recovery, facilitate rapid, constructive, inclusive and effective international cooperation, enhance payments transparency, and promote responsible innovation within the virtual assets sector while mitigating illicit finance involving virtual assets," the declaration states.

Ethereum Treasury Firm BitMine Announces Crypto's First-Ever Dividend Payment – Report

2025 has been a year of ups and downs for the cryptocurrency industry, with the performance of digital asset treasuries (DATs) a perfect example of this trend. While Bitcoin and Ethereum treasury firms like Strategy and BitMine seem to be weathering the recent storm, other companies have succumbed to the bursting bubble of DATs.

For instance, BitMine has disclosed its plans to become "the first large-cap cryptocurrency company to declare annual dividends." This announcement came as the Ethereum treasury firm released its fiscal year results on Friday, November 21.

BitMine To Pay \$0.01 Dividend Per BMNR Share
In a press release on Friday, the largest Ethereum treasury company, BitMine, reported a net income of \$328

million—equal to \$13.39 in fully diluted earnings per share (BMNR). The firm also shared its plan to become the first large-cap crypto company to pay dividends to its shareholders.

The Ethereum treasury company intends to pay an annual dividend of \$0.01 per BMNR share, as it looks to return some value to shareholders amid the weakening crypto market. According to the press release, the payable date for the dividend is set at December 29, 2025, with BitMine's next shareholder meeting to be held in January 2026.

BitMine's Chairman, Tom Lee, said in the release:

BitMine continues to execute at the highest level. The company is well positioned in 2026 and we look forward to commencing ETH staking with our MAVAN, or Made in America Validator Network, in early calendar 2026.

Andrew Tate loses everything on Hyperliquid: Inside his leveraged crypto liquidation meltdown

Arkham's ledger shows \$727k in Hyperliquid deposits, \$0 withdrawals, and even \$75K in referral rewards churned.

Andrew Tate deposited \$727,000 into Hyperliquid over the past year, took no withdrawals, and lost the entire stack through a relentless series of leveraged liquidations that culminated on Nov. 18, when his account hit zero.

Per Arkham's on-chain ledger, even the roughly \$75,000 in referral commissions Tate earned from bringing traders onto the platform was traded back into positions and liquidated.

The saga offers a case study in how high leverage, low win rates, and reflexive doubling-down can turn a six-figure bankroll into a public spectacle, especially when the trader broadcasts every entry and deletion on social media.

Tate's Hyperliquid activity spans nearly a year, with the first documented cluster of forced closes landing on Dec. 19, 2024.

That day saw multiple long positions across BTC, ETH, SOL, LINK, HYPE, and PENGU liquidated simultaneously, according to Arkham's trade history review.

Cardano Temporarily Splits Into Two Chains After Attacker Uses AI-Generated Script to Exploit a Known Bug

The divergence emerged when newer nodes accepted a malformed transaction that older nodes rejected.

A malformed transaction caused a brief chain split in Cardano, leading to an emergency patch and network-wide upgrade.

The incident is under investigation as a potential cyberattack, with a former testnet participant's wallet identified as the source. Cardano co-founder Charles Hoskinson described the event as a targeted attack by a disgruntled stake-pool operator.

A malformed transaction pushed Cardano into a brief chain split

on Saturday, as older and newer node versions validated transaction data submitted to the network differently.

The mismatch caused some block producers to follow a "poisoned" chain while others stayed on the normal one, prompting an emergency patch and network-wide upgrade instructions.

The incident — which has since been traced to a wallet belonging to a former testnet participant — is being investigated as a potential cyberattack.

Cardano ecosystem governance body Intersect said in a post-mortem report that the divergence emerged.

Bitwise CEO Declares Bitcoin's Four Year Cycle Dead – Issues Major BTC Prediction for 2026

As Bitcoin's price continues to tumble, the CEO of the billion-dollar crypto asset manager Bitwise says the theory that BTC follows a predictable four year cycle is cooked.

In a new post on X, Hunter Horsley says the cyclical notion based on BTC's supply schedule halving is over, with holders denied a massive breakout this time around.

As for what's next, Horsley believes BTC is now poised to reach new highs next year.

"BTC is down year to date, and the four year cycle is no more. The four year cycles were a pattern based on a bygone era.

The market structure and the types of investors diversifying. The space is maturing, and moving toward the mainstream. I think Bitcoin is headed higher in 2026."

Horsley says Bitcoin and crypto at large are currently in a consolidation phase, as weak hands bow out.

"Right now crypto is consolidating. What does that mean?

In essence, it means high conviction investors are buying assets from lower conviction inves-

tors. One person sees BTC at \$88,000 or SOL at \$133 and says, 'I want out.'

Another person sees \$88,000 or \$133 and says, 'I have so much conviction, I'll buy it from you — I'm happy to have that be my cost basis.'

Bitcoin ATM Firm Weighing \$100 Million Sale Following Money Laundering Charges

Chicago-based Crypto Dispensers says it's considering a \$100 million sale, just days after the firm and its founder were hit with money laundering charges.

Bitcoin ATM operator Crypto Dispensers says it's considering a \$100 million sale of the company.

Both the company and founder and CEO Firas Isa were charged in an alleged \$10 million money laundering scheme earlier this week.

Crypto Dispensers and Isa pleaded not guilty to the charges.

Crypto Dispensers (aka Virtual Assets LLC), a Chicago-based opera-

tor of ATMs that let users buy and send Bitcoin and other cryptocurrencies, said Friday that it is weighing a potential sale valued around \$100 million.

The announcement came just days after the U.S. Department of Justice filed charges against both the company and founder and CEO Firas Isa, alleging that they perpetrated a \$10 million money laundering scheme.

Crypto Dispensers and Isa have pleaded not guilty to the single money-laundering conspiracy charge against each, which holds a maximum sentence of 20 years in federal prison.

VanEck boss questions Bitcoin's privacy, encryption against quantum tech

Jan van Eck says quantum computing could threaten Bitcoin's encryption and privacy, and his firm "will walk away" if it's "fundamentally broken."

Bitcoin's encryption and privacy could be at risk from quantum computing, but it is still a good investment for now, says Jan van Eck, CEO of investment manager VanEck.

"There is something else going on within the Bitcoin community that non-crypto people need to know about," van Eck told CNBC on Saturday. "The Bitcoin community has been asking itself: Is there enough encryption in Bitcoin? Because quantum computing is coming."

He said that the company believes in Bitcoin BTC \$86,271, but it

was around before the cryptocurrency launched and "will walk away from Bitcoin if we think the thesis is fundamentally broken."

VanEck is one of the world's largest crypto asset managers and has multiple Bitcoin products, including a spot Bitcoin exchange-traded fund in the US that has taken in over \$1.2 billion in inflows since launching in early 2024.

Van Eck said that a lot of Bitcoin "OGs or maxis" have been looking at Zcash ZEC \$541.10, a privacy-focused token, in their search for more privacy for their transactions.

Zcash has soared by over 1,300% in the past three months as the market.

South Korea Set To Sanction Crypto Exchanges Over AML Failures

The FIU plans to sanction remaining major exchanges after inspecting Upbit, Bithumb, Coinone, Korbit and GOPAX for KYC and suspicious transaction compliance.

The South Korea financial watchdog is preparing a fresh round of penalties for domestic virtual asset exchanges, stepping up its campaign against anti-money laundering failures that regulators say threaten the integrity of the country's fast-growing crypto market.

Financial authorities are expected to issue both institutional and individual sanctions, along with fines, against major trading platforms that breached anti-money laundering obligations, according to a local report published Monday.

The Korea Financial Intelligence Unit, or FIU, is moving through cases in the order of its on-site inspections, effectively using a first-in, first-out approach.

FIU Preparing Sanctions After Completing Major Exchange Inspections
The report said that the FIU plans to sanction the remaining large exchanges after already acting against Dunamu, the operator of Upbit. Since last year, the unit has carried out inspections at Upbit, Bithumb, Coinone, Korbit, and GOPAX to check compliance with rules such as Know Your Customer checks and the reporting of suspicious transactions.

Most fieldwork is now complete, and legal reviews and sanctions committees are underway.

Largest Base DEX Aerodrome Suffers Front-End Breach — Here's What We Know

Aerodrome, the largest decentralized exchange (DEX) on the Ethereum Layer 2 network Base, reported a suspected front-end compromise on Saturday, November 22. In the early hours of the weekend, the project disclosed that it is investigating an attack and asked users to avoid their centralized domains.

Dromos Labs' Sister Protocols Hit With Another DNS Hijack On Saturday, Aerodrome took to the social media platform X to report its ongoing investigation of a DNS hijack of its centralized domains. While assuring users that all smart contracts remain secure, the project told users to access the DEX through its decentralized mirror.

For context, a DNS hijack allows an attacker or bad actor to manipu-

late the Domain Name System (DNS) in order to redirect users from a legitimate website to a malicious one. In essence, this compromise redirected users of the Base-native Aerodrome to a fraudulent website on Wednesday.

It appears that the problem with the decentralized exchange might have stemmed from its domain provider. Earlier in the day, Aerodrome went on the X platform to inform Web3 domain provider My.box that its infrastructure had likely been compromised and to reach out to them.

Base-domiciled Aerodrome was not the only decentralized exchange affected by this DNS hijack, as its sister protocol Velodrome appears to be facing a similar issue.

Michael Saylor's Poll Shows Broad Hesitation to Sell Bitcoin During Sharp Decline

A massive show of conviction from Michael Saylor's poll underscored bitcoin's strength as most participants held firm through the dip, reinforcing bullish momentum fueled by institutional demand, steady accumulation and confidence in the asset's long-term trajectory.

Bitcoin Hodlers Stay Firm as Volatility Surges Strategy executive chairman Michael Saylor shared on Nov. 22 on social media platform X a poll conducted during a sharp bitcoin price drawdown, capturing how users responded while the asset was under pressure. The post highlighted behavior that often shapes short-term sentiment.

"Did you HODL this week?" launched the

poll, circulating as bitcoin slipped toward key support zones earlier in the week. The drop unsettled traders, sending the price briefly into the low-\$80,000s before rebounding near \$86,550. Despite the turbulence, 77.8% of 133,156 respondents selected Yes. The reaction suggested many users maintained positions instead of exiting during the downturn, even as daily charts signaled persistent weakness.

Amid a bitcoin price dip, Saylor remains a staunch bull, saying his firm, Strategy (MSTR), which owns a massive bitcoin treasury, is "indestructible." Concurrently, MSTR faces the risk of exclusion from MSCI indices because its digital asset holdings now exceed 50% of total assets.
