HIKVISION

What are the key benefits

Remote management

Users take complete control of on-site security of multiple sites at any time, from anywhere. Get real-time monitoring views, play back video footage, and manage all your sites on the cloud.

Highly scalable

Lightweight and easy to scale, the platform grows in scope and size as your business grows. A monthly subscription mode allows users to add or remove devices in stages, adjust subscription services, and pay for only what you actually use.

Secure and reliable

Hosted in the cloud, users will enjoy professionally managed services. No need to worry about hardware risks and system compatibility since it is always up-to-date. Rest assured with safeguarded architecture and encrypted protection.

Budget friendly

Minimize your upfront investments and labor costs for maintaining servers via cloud-hosting infrastructure. Environmentally friendly with reduced carbon emissions and maximum utilization of infrastructure and bandwidth resources.

Easy to deploy

Quickly deploy security projects without the need to install or maintain a bunch of servers. Since everything is in the cloud, there's no more configuration for port forwarding or building VPNs.

How to use HikCentral Connect

How to get a free trial

1. You can register via HikCentral Connect portal or on App by yourself, set your own password and start using for free
2. Or you can contact your service provider, who will create your HikCentral Connect account for you

How to purchase and renew subscription services
