Sustainability at the core

Pure Waste is a Finnish company that has redefined the textile industry with a commitment to sustainability since 2013. We stand out by crafting premium garments exclusively from 100% recycled fibers, free from dyes, a unique approach that sets us apart.

We mechanically recycle, cutting waste into premium textiles, offering the same quality, comfort, and competitive pricing as fresh materials. Our innovative approach significantly reduces environmental impact, utilizing 99% less water and producing 50% fewer CO2 emissions compared to conventional garments made from virgin materials. This process underscores our dedication to ethical manufacturing and environmental responsibility.

With Pure Waste, you're choosing more than just apparel; you're joining a movement toward a greener, more sustainable future. With our commitment to transparency, you'll clearly understand the positive impact your choices make without compromising on style or values. Our collections aren't just designed to look good; they're made to do good!

Our Impact

99% Less H2O

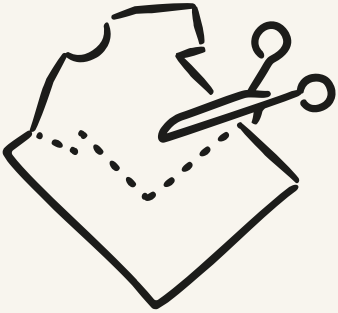

50% Less CO2e

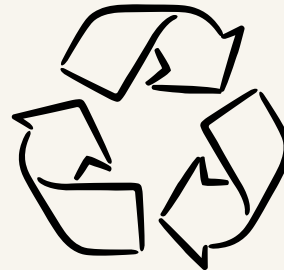

No Dyes Added

when compared to similar products made of virgin materials.

The Recycling process

Our journey begins with 100% recycled fibers: a sustainable mix of cotton-cutting waste and recycled PET polyester from plastic bottles, setting the stage for eco-friendly fabric production.

The cotton waste is sorted by color and mechanically opened back into fibers. These fibers are blended with recycled PET polyester, paving the way for the next step in the recycling process.

These recycled fibers are then spun into new yarns. By utilizing the inherent color of the recycled fibers, we eliminate the need for re-dyeing, maintaining the fabric's natural hue.

The final result is a range of sustainable and durable garments. Our process uses 99% less water and generates 50% fewer CO2 emissions than the production of similar products from virgin materials.

Classics Collection

Our Classics Collection is a range of classic clothes that withstand both time and use - clothes that will stay in our collection for years to come. Most garments are unisex, and all are made from recycled cotton and polyester from recycled bottles.

Our Impact

99% Less H2O

50% Less CO2e

No Dyes Added

when compared to similar products made of virgin materials.

Men's T-shirt

Style description

The Pure Waste Classic T-Shirt exemplifies the perfect blend of enduring style, eco-consciousness, and quality. Its lasting design boasts a straight cut and slightly elongated hem, embodying versatility for all occasions. The narrow ribbed neckline adds a touch of sophistication to its minimalist aesthetic. Designed with men's measurements in mind, this unisex model accommodates everyone. Simply choosing a size smaller than usual ensures the ideal fit for women.

Green Product Award Winner 24 Fashion

Pure Waste was honored with the Green Product Award Fashion 2024 in the Clothing category. The Green Product Award has been a beacon for eco-innovation since its inception in 2013. This year's competition had participants hailing from 20 countries across the globe. Out of 30 innovative nominees, Pure Waste stood out as one of the winners, underscoring our role in setting new standards and trends for the industry.

"The entire product range is made from 100% recycled fibers - a prime example of the circular economy. The timeless design and high wearing comfort, combined with market-driven prices, give hope for the future," stated the Green Product Award Fashion jury. This official statement reflects our mission at Pure Waste: to produce clothes with a minimal ecological footprint, exclusively crafted from 100% recycled fibers. Our commitment to sustainability is evident in our commitment to classical design and uncompromising quality.

"The works of the winners show what is already possible today and provide inspiration for how the industry could implement sustainable fashion today." This statement underscores our contributions to reimagining what the fashion industry can achieve regarding sustainability. It acknowledges our unwavering commitment to sustainable fashion and innovative efforts to reduce environmental impact.

Neck Print & Savings Label

Every Pure Waste garment features a neck print or woven label detailing its specific environmental footprint and showcasing its water and CO2 savings, allowing you to understand each garment's direct impact.

Additionally, every product has a woven label on the outer side seam, summarizing the general savings: 99% in water usage and 50% in CO2 emission.

These elements highlight our commitment to transparency and environmental stewardship, offering a clear view of the positive change one contributes to with every Pure Waste purchase.

Discover your impact

Private Label Production

Are you looking for a sustainable and customized garment option?

In addition to our Classics -collection, we manufacture:

- Custom styles according to your sample.
- Custom design service according to your needs.
- Colors on demand (ask for MOQ).
- Fabric quality on demand (ask for MOQ).
- Custom or without neck print.

Get the garment you wish, and we will produce it just as you like: choose the fit, color, prints, labels, and all other necessities. Just tell us your idea, and we will do the rest.

The minimum order quantity is 1,000 pieces per color/product style when fabric is available and 5,000 pieces per color/product style for a custom color.

All Pure Waste Garments are Made of 100% Recycled Fibers

100% Recycled Fibers

Our garments are made of 100% recycled fibers - recycled cotton and PET bottle polyester.

Less Water

Our garments consume 99% less water than products made from virgin materials.

Less CO2

Our garments generate 50% less CO2e emissions than products made from virgin materials.

No Chemicals

The use of recycled cotton eliminates the need for insecticides and fertilizers.

No Dyes Added

We do not dye our fabrics; the color of the waste determines the color of the final product.

Renewable Energy Use

We use renewable wind and solar energy in our garment production.
