
FAMILY OF COMPANIES

- SPECIALTY GAS •
- MEDICAL GAS •
- INDUSTRIAL GAS •

AGL's goal is to enhance the individual and organizational performance of its customers through the effective selection and efficient use of quality products.

CAPABILITIES

AGL is independently owned and operated.

AGL is an authorized Air Products, Matheson, and Messer Group industrial, medical and specialty gas distributor.

AGL's fill plant operations are FDA registered and inspected. Plant operations are also audited annually and conform to ISO 9001 standard operating procedures thus allowing the highest quality gases available.

AGL ensures product quality from receipt to final delivery through constantly monitored and updated Quality Control procedures. Its state-of-the-art in-house Specialty Gas Laboratory can accommodate the increasing demand for certified pure gases and mixtures.

AGL owns, operates and maintains a fleet of delivery vehicles. Its fleet includes cylinder delivery trucks, bulk liquid nitrogen and oxygen transports as well as gaseous helium and hydrogen tube trailers. These capabilities, with the additional support of our vendors' delivery fleets, gives you a fail safe reliability of product delivery.

AGL owns and maintains its large cylinder inventory thru its DOT certified hydrostatic testing and reconditioning facility.

AGL's flexibility allows the use of other vendors' cylinders resulting in a single source of rental billing.

AGL's unique pricing structure unbundles components allowing for identification of costs for bottom line analysis of its competitiveness.

AGL is accessible to its customers 24 hours a day, 7 days a week, 365 days a year.

AGL's market position allows us to align with a variety of major gas and equipment manufacturers enabling us to draw on their strengths and present to you, our customer, these benefits.

AGL's plan to accomplish its goal is to fully exploit its unique capabilities so that its customers can expect AGL to respond to their needs faster and more efficiently than any other supplier in the region.

A BRIEF TUTORIAL ON GAS HANDLING EQUIPMENT

PRESSURE REGULATORS

Pressure regulators (often just called regulators) are used in a gas system to reduce the pressure from a high pressure source, such as a compressed gas cylinder or a gas supply pipeline, to a safe level consistent with the pressure rating of the system to which the gas is being supplied. They provide positive control of the source pressure in a gas system. This control of pressure permits better control of flow rates and helps to provide a safer operation.

There are two basic types of pressure regulators; two-stage and one-stage. The outward appearance of both types is very similar and it is often difficult for the novice to identify the two types.

Most two-stage and one-stage pressure regulators are fitted with two pressure gauges; one to monitor the inlet pressure and the other to monitor the delivery pressure. Line regulators and some regulators used on liquefied gases have only a delivery pressure gauge, because in these applications the inlet pressure is virtually constant. Historically, the compressed gas industry has established the convention of placing the inlet and high pressure gauge on the right and the low pressure and delivery pressure gauge on the left.

A pressure regulator **does not** control flow, but precise control of pressure is required for precise flow control. This is accomplished by the installation of a valve on the outlet side of the regulator in conjunction with a flowmeter or electronic mass flow controller.

What is the difference between a two-stage and one-stage pressure regulator? A two-stage regulator reduces the pressure in two steps. In the first stage the high pressure gas is reduced to a pre-set intermediate pressure level, then reduced again in the second stage to the manually adjusted value desired by the operator. This two step reduction provides steady gas delivery throughout the discharge of almost the full cylinder contents. This is why two-stage regulators are used whenever the discharge pressure of a system must be precisely maintained. Two-stage regulators are generally used whenever the compressed gas cylinder pressure exceeds 1000 psig. Cylinders having a pressure less than 1000 psig are generally fitted with a one-stage regulator since the advantage of the two-stage regulator is minimized by the lower inlet pressure.

One-stage regulators perform the same service as two-stage regulators, but in one step. Thus, the discharge pressure is not controlled with the same precision, because the discharge pressure will vary widely over the full range of cylinder pressures unless periodic adjustments are made to compensate for decreasing inlet pressures. One-stage regulators are economic alternatives in applications where precise control is not required or usage is intermittent over the life time of the source cylinder.

NOTE: See pages 130-146 for gas data and equipment recommendations.

RELIEF VALVES

Relief valves are installed in systems or regulators to protect against over pressurization of system components that are not capable of withstanding the higher pressures that could enter the protected region upon the failure of another system component or an operator error. Relief valves are generally offered in two types, adjustable or fixed pressure. Adjustable units can be set by the user at different pressures within a reasonably wide range. Fixed pressure units are preset at the factory for one pressure and cannot easily be changed.

PURGE DEVICES

Purge devices are valving systems usually installed on the inlet side of a pressure regulator, to maintain the integrity of a high purity gas system, remove toxic or corrosive residual gases from the regulator inlet, and/or protect the operator from exposure during cylinder changeovers or system shut-downs.

MANUAL CONTROLS

Manual controls are valves that have been designed for direct connection to a compressed gas cylinder valve outlet. They provide a simple means of transferring the contents of a cylinder to another system or vessel. They **do not control pressure** and should never be used without an operator in attendance at all times. A safety relief device should be installed in any system employing a manual control.

FLOWMETERS

Flowmeters are used in fluid systems to indicate the rate of flow of the fluid. They do not control the rate of flow unless they are equipped with a valve or flow controller. Rotameters and electronic mass flowmeters are the two basic types of flow measuring devices available. For more specific information see pages 31-39.

PURIFIERS

Purifiers are devices that are designed to remove specific impurities or components from a gas stream. They generally function by adsorption or catalytic action. Some are designed as housings that accept replaceable cartridges containing the adsorbing materials, others are sealed units that are replaced completely, while others require no replacement or can be regenerated in place.

PARTICULATE FILTERS

Gas line filters are devices designed to remove particles from the gas stream in which they are installed. The size of the particles removed is determined by the filter media used. A filter's rating is usually expressed in microns, referring to the maximum size diameter that will pass through the filter.

VALVES

There are two basic types of valves used with gases; diaphragm packless and packed. Diaphragm, packless valves are used for on/off control or rough flow control in high purity applications. They are designed using a metal diaphragm to seal the gas cavity from the valve stem threads. Packed valves are designed with a packing gland that creates a seal on the valve stem. This packing may be above or below the threads of the valve, depending on the intended application.

CYLINDER SCALES

A cylinder scale is used to monitor the contents of a liquefied gas cylinder feeding a critical batch operation where a lack of gas during the run would cause the batch to fail. Cylinder scales are designed to provide a positive indication of the amount of product remaining in the cylinder. Two types are generally offered, mechanical and electronic. Electronic scales offer the added benefit of a low weight alarm and relay contacts to operate accessory equipment. Both types are offered in this catalog.

pressure regulator component designations

BRASS

HIGH PURITY 1-STAGE REGULATOR

Series 3100

DESCRIPTION

The Series 3100 single stage regulators are designed and constructed for both high purity, low volume use and general purpose applications. They provide outstanding performance, yet they are rugged and versatile enough for the laboratory or plant. The relative low cost of these units has established them as the pressure regulator of choice in many plants and laboratories.

FEATURES

- Small internal volume - less than 5 cc.
- High purity diffusion resistant, metal diaphragm construction.
- Encapsulated seat.
- Diffusion resistant, brass diaphragm packless control valve installed on outlet as standard.
- Designed to pass an inboard helium leak-rate test of 1×10^{-9} cc per sec.
- All parts ultrasonically cleaned prior to assembly.
- Rear panel mounting holes.

APPLICATIONS

The 3100 Series regulators are ideally suited for use with small cylinders of Research Purity or Ultra High Purity gases. The small internal volume and high purity design result in more efficient use of expensive materials because it takes less gas to fill the internal cavity. They are also useful for less critical pressure reduction applications, where the precise control of pressure or flow is not required.

Special 3103A model for acetylene.

NOTE: See pages 150-166 for gas data and equipment recommendations.

SPECIFICATIONS

Max. Inlet Pressure: 3000 psig
 Operating Temp. Range: -40° to +185°F.
 Flow Coefficient (C_v): 0.08 Standard, 0.2 optional **
 Inlet and Outlet: 1/4" NPT female
 Outlet Valve Standard

MATERIALS OF CONSTRUCTION

Body: brass
 Nozzle Assembly: brass
 Seat: Kel-F®
 Diaphragm: stainless steel
 Diaphragm Seal: Teflon®
 Inlet Filter: stainless steel
 Bonnet: nickel plated aluminum
 Gauges: brass
 Knob: aluminum - black anodized

HIGH PURITY 2-STAGE REGULATOR

Series 3200

DESCRIPTION

The Series 3200 two stage regulators are designed and constructed for both high purity and general purpose applications. While compact in design these regulators provide outstanding performance, comparable to most larger diaphragm competitive models. They are ideally suited for use with gases and gas mixtures having a full cylinder pressure of 1000 psig or more. The construction is rugged enough for the plant, yet versatile enough for the laboratory.

FEATURES

- High purity diffusion resistant, metal diaphragm construction on both stages.
- Encapsulated seats on both stages.
- Diffusion resistant, brass diaphragm packless control valve installed on outlet as standard.
- Designed to pass an inboard helium leak-rate test of 1×10^{-9} cc per sec.
- All parts ultrasonically cleaned prior to assembly.
- Optional interstage safety relief valve available.

APPLICATIONS

The 3200 Series regulators are ideal for critical pressure reduction applications, where the precise control of pressure or flow is required. They are an excellent choice for use with high purity carrier gases or gas mixtures used with gas chromatographs and other instrumentation. Once you experience the improved control of gas to your gas chromatograph or other system, you will want to upgrade all your other regulators.

SPECIFICATIONS

Max. Inlet Pressure: 3000 psig
 Operating Temp. Range: -40° to +185°F.
 Flow Coefficient(C_v): 0.08 Standard, 0.2 optional**
 Inlet and Outlet: 1/4" NPT female
 Outlet Valve Standard
 Delivery Pressure Rise: 0.02 psig max. per 100 psi inlet pressure decay.

STAINLESS STEEL HIGH PURITY 1-STAGE REGULATOR Series 3400

DESCRIPTION

The Series 3400 single stage regulators are designed and constructed for both high purity and general purpose applications. They provide outstanding performance, yet they are rugged and versatile enough for the laboratory or plant.

FEATURES

- Low internal volume - less than 5 cc.
- High purity diffusion resistant, metal diaphragm construction.
- Encapsulated seat.
- Diffusion resistant, stainless steel diaphragm packless control valve installed on outlet as standard.
- Designed to pass an inboard helium leak-rate test of 1×10^{-9} cc per sec.
- All parts ultrasonically cleaned prior to assembly.
- Rear panel mounting holes.

APPLICATIONS

The 3400 Series regulators are ideal for use with many corrosive gases, such as ammonia, hydrogen sulfide, and sulfur dioxide. They are also very useful for controlling the pressure of gas mixtures containing reactive gas components and low levels of the corrosive halogen gases, like chlorine.

SPECIFICATIONS

Max. Inlet Pressure: 3000 psig
 Operating Temp. Range: -40° to +185°F.
 Flow Coefficient (C_v): 0.08 standard, 0.2 optional**
 Inlet and Outlet: 1/4" NPT female
 Outlet Valve Standard

STAINLESS STEEL HIGH PURITY 2-STAGE REGULATOR Series 3500

DESCRIPTION

The Series 3500 two stage regulators are designed and constructed for both high purity and general purpose applications. While compact in design these regulators provide outstanding performance, comparable to most larger diaphragm competitive models. They are an excellent choice for use with ultra high purity gases or gas mixtures having a full cylinder pressure of 1000 psig or more. They are rugged and versatile enough for the laboratory or plant.

FEATURES

- High purity diffusion resistant, metal diaphragm construction on both stages.
- Encapsulated seats on both stages.
- Diffusion resistant, stainless steel diaphragm packless control valve installed on outlet as standard.
- Designed to pass an inboard helium leak-rate test of 1×10^{-9} cc per sec.
- All parts ultrasonically cleaned prior to assembly.
- Optional interstage safety relief valve available.

APPLICATIONS

The 3500 Series regulators are ideal for critical pressure reduction applications, where the precise control of pressure or flow is required. They are also very useful for controlling the pressure of gas mixtures containing corrosive gases, such as ammonia, hydrogen sulfide, sulfur dioxide, and low levels of the corrosive halogen gases, like chlorine.

ECONOMICAL, CORROSIVE GAS, HIGH PURITY 1-STAGE REGULATOR

Series 3450

DESCRIPTION

The Series 3450 single stage regulators are specifically designed and constructed for use with difficult to handle gases, like chlorine and hydrogen chloride. The Monel® internal parts installed in a 316L stainless steel body create an economical high purity corrosive gas regulator for most applications.

FEATURES

- Monel® internal parts for added corrosion resistance.
- Encapsulated seat.
- High purity diffusion resistant, metal diaphragm construction.
- Diffusion resistant, diaphragm packless control valve installed on outlet as standard.
- Designed to pass an inboard helium leak-rate test of 1×10^{-9} cc per sec.
- All parts ultrasonically cleaned prior to assembly
- Rear panel mounting holes.

APPLICATIONS

The 3450 Series regulators are ideal for use with many corrosive gases, such as chlorine, hydrogen chloride, boron trichloride, and boron trifluoride. They are also useful for controlling the pressure of gas mixtures containing these corrosive gas components, particularly at higher concentration levels.

SPECIFICATIONS

Max. Inlet Pressure: 3000 psig
 Operating Temp. Range: -40° to +185°F.
 Flow Coefficient(C_V): 0.08
 Inlet and Outlet: 1/4" NPT Female
 Outlet Valve Standard

ECONOMICAL, CORROSIVE GAS, HIGH PURITY 2-STAGE REGULATOR Series 3550

DESCRIPTION

The Series 3550 two stage regulators are designed and constructed for use with reactive and corrosive gases and gas mixtures. While compact in design these regulators provide outstanding performance, comparable to most larger diaphragm competitive models. The Monel® internal parts installed in a 316L stainless steel body create an economical, high purity, corrosive gas regulator.

FEATURES

- Monel® internal parts for added corrosion resistance.
- High purity diffusion resistant, metal diaphragm construction on both stages.
- Encapsulated seats on both stages.
- Diffusion resistant, stainless steel diaphragm packless control valve installed on outlet as standard.
- Designed to pass an inboard helium leak-rate test of 1×10^{-9} cc per sec.
- All parts ultrasonically cleaned prior to assembly.

APPLICATIONS

The 3550 Series regulators are ideal for critical pressure reduction applications involving higher pressure reactive and/or corrosive gases, where the precise control of pressure or flow is required. They are an excellent choice for use with gas mixtures of such components having a full cylinder pressure of 1000 psig or more.

SPECIFICATIONS

Max. Inlet Pressure: 3000 psig
 Operating Temp. Range: -40° to +185°F.

BRASS

HIGH PURITY LINE REGULATOR

Series 3101L

DESCRIPTION

The 3101L Series line regulators are designed to suit a large variety of applications. The high purity design makes them ideal for line drop regulators in instrumentation labs, with the 0.2 C_v orifice they are capable of very high flow rates.

FEATURES

- Small internal volume - less than 5cc.
- Capable of large flows with only a small pressure drop.
- High purity diffusion resistant, metal diaphragm construction.
- Encapsulated seat.
- Diffusion resistant, brass diaphragm packless control valve installed on the outlet as standard.
- Designed to pass an inboard helium leak-rate test of 1x10⁻⁹ cc per sec.
- All parts ultrasonically cleaned prior to assembly.
- Rear panel mounting holes.

APPLICATIONS

The 3101L Series is an excellent choice for gas flow applications with low inlet pressures and low differential pressure between regulator inlet and outlet.

SPECIFICATIONS

Max. Inlet Pressure: 3000 psig
 Operating Temp. Range: -40° to +185°F.
 Flow Coefficient(C_v): 0.08 standard, 0.2 Cv optional**
 Inlet and Outlet: 1/4" NPT female
 Outlet Valve Standard

STAINLESS STEEL HIGH PURITY LINE REGULATOR Series 3401L

DESCRIPTION

The 3401L Series line regulators are designed to suit a large variety of applications. The high purity design makes them ideal for line drop regulators in instrumentation labs, with the 0.2 Cv orifice they are capable of very high flow rates.

FEATURES

- Small internal volume - less than 5cc.
- Capable of large flows with only a small pressure drop.
- High purity diffusion resistant, metal diaphragm construction.
- Encapsulated seat.
- Diffusion resistant, stainless steel diaphragm packless control valve installed on the outlet as standard.
- Designed to pass an inboard helium leak-rate test of 1×10^{-9} cc per sec.
- All parts ultrasonically cleaned prior to assembly.
- Rear panel mounting holes.

APPLICATIONS

The 3401L Series is an excellent choice for gas flow applications with low inlet pressures and low differential pressure between inlet and outlet. The high inlet pressure rating makes also very suitable as a sensitive cylinder regulator for many low pressure corrosive gases when fitted with the proper CGA cylinder valve outlet connection.

SPECIFICATIONS

Max. Inlet Pressure: 3000 psig
 Operating Temp. Range: -40° to +185°F.
 Flow Coefficient(Cv): 0.08 standard, 0.2 Cv optional **

ECONOMICAL CORROSIVE GAS HIGH PURITY LINE REGULATOR Series 3451L

DESCRIPTION

The 3451L Series line regulators are designed to suit a large variety of applications. The installation of Monel® internal parts into a stainless steel body creates an economical, high purity line regulator for corrosive gas service.

FEATURES

- Capable of large flows with only a small pressure drop.
- Monel® internal construction for increased corrosion resistance.
- High purity diffusion resistant, metal diaphragm construction.
- Encapsulated seat.
- Diffusion resistant, stainless steel diaphragm packless control valve installed on the outlet as standard.
- Designed to pass an inboard helium leak-rate test of 1×10^{-9} cc per sec.
- All parts ultrasonically cleaned prior to assembly.
- Rear panel mounting holes.

APPLICATIONS

The 3451L Series is an excellent choice for corrosive gas flow applications with low inlet pressures and low differential pressure between regulator inlet and outlet.

SPECIFICATIONS

Max. Inlet Pressure: 3000 psig
 Operating Temp. Range: -40° to +185°F.
 Flow Coefficient(C_v): 0.08 standard
 Inlet and Outlet: 1/4" NPT female
 Outlet Valve Standard

CORROSIVE GAS, 1-STAGE REGULATOR

Series 3470

DESCRIPTION

The Series 3470 single stage regulators are specifically designed and constructed for use with difficult to handle gases, such as chlorine and hydrogen chloride. The large monel nozzle and PCTFE® seat combined with the tied diaphragm assembly greatly reduces the possibility of failure due to creep so common in other corrosive gas regulators. A Teflon-lining on the stainless steel diaphragm forms a protective coating to extend regulator life. The electroless nickel-plated brass body is a major contributor to the economical nature of this regulator while providing corrosion protection.

FEATURES

- Four built-in PCTFE seats provide convenient maintenance and long regulator life.
- Large Teflon® lined 316L stainless steel diaphragm.
- Monel valve with Teflon packing installed on outlet.
- Captured vent bonnet provides for safe venting in the event of a diaphragm failure.

APPLICATIONS

The 3470 Series regulators are ideal for use with many corrosive gases, such as chlorine, hydrogen chloride, boron trichloride, and boron trifluoride. They are also useful for controlling the pressure of high concentration gas mixtures containing these corrosive gas components.

NOTE: See pages 150-166 for gas data and equipment recommendations.

MATERIALS OF CONSTRUCTION

Body: Electroless nickel-plated brass
 Nozzle: Monel®
 Seat: PCTFE
 Diaphragm: Teflon® Lined 316L Stainless Steel
 Inlet Filter: Electroless nickel-plated sintered bronze
 Seals: Viton

SPECIFICATIONS

Max. Inlet Pressure - 3000 psig
 Operating Temp. Range - 20° to +160°F
 Flow Coefficient(C_v) 0.129
 Body Inlet and Outlet - 1/4" NPT female
 Valve outlet - 1/4" NPT male

HIGH FLOW – HIGH PURITY REGULATOR

Series 3831H

DESCRIPTION

The 3831H series regulators are designed for high flow applications involving high purity gases. The series features a Cv of 0.55 and excellent regulation.

FEATURES

- Capable of high flows with only a small pressure drop.
- High purity metal diaphragm construction.
- All parts ultrasonically cleaned prior to assembly.
- Excellent pressure regulation – 1.6 psi/100 psi.
- Encapsulated seat with 10 micron filter.

APPLICATIONS

The 3831H series regulators are ideal as manifold, laser assist gas, or pipeline regulators for high flow systems of high purity or industrial gases.

SPECIFICATIONS

	3831H	3831HL
Max. Inlet Pressure:	3000 psig*	3000 psig*

HIGH FLOW – PISTON-SENSED REGULATOR

Series 3833

DESCRIPTION

The 3833 series regulators are designed for high flow applications. The series features a large main valve with a Cv of 2.0.

FEATURES

- Capable of high flows with only a small pressure drop from full to empty cylinder.
- Wide choice of delivery pressure ranges.
- Available in aluminum, brass and stainless steel.

APPLICATIONS

The 3833 series regulators are ideal to meet the requirements of systems where a high flow of gases needs to be delivered with good outlet pressure control.

3833

HIGH PRESSURE – PISTON-SENSED REGULATOR

SERIES 3832

DESCRIPTION

The 3832 series regulators are designed for high pressure applications up to 2500 psig involving applications with inlet pressures up to 3000 psig. The series features a main valve with a Cv of 0.08.

FEATURES

- Capable of high flows with only a small pressure drop.
- Available in brass or stainless steel construction.
- Unbalanced stem provides positive shut-off.

APPLICATIONS

The 3833 series regulators are ideal to meet the requirements of systems where a high flow of gases needs to be delivered with good outlet pressure control.

HIGH PRESSURE – MONEL PISTON-SENSED REGULATOR SERIES 3835

DESCRIPTION

The 3835 series regulators are ideally designed for use in high pressure oxygen applications with delivery pressures up to 2500 psig involving applications with inlet pressures up to 3000 psig. The series features a main valve with a Cv of 0.08.

FEATURES

- Capable of high flows with only a small pressure drop.
- Monel construction.
- Unbalanced stem provides positive shut-off.

APPLICATIONS

The 3833 series regulators are ideal to meet the requirements of systems where a high flow of gases needs to be delivered with good outlet pressure control.

HIGH PRESSURE REGULATORS

Series 3800V

DESCRIPTION

These series 3800V regulators feature a compact, reliable piston design for precise gas control at higher inlet pressures. They are designed for non-corrosive gas service and are especially suited for dead-end pressurized systems, such as pressure vessel testing.

FEATURES

- Piston type actuation.
- Cartridge type seat assembly.
- Delrin cap bushing for smooth adjustment.
- Easily panel mounted with optional panel mount nuts.
- Double filter protection

SPECIFICATIONS

Maximum inlet: up to 6000 psig
 Operating temperature: 0° to 140°F.
 Cv factor: 0.103
 Outlet port: 1/4" NPT female
 Outlet Connection: 1/4" stainless steel compression fitting
 Weight: 4 lbs.
 Dimensions: 6"W x 6-1/2"H x 6-1/4"

MATERIALS OF CONSTRUCTION

Body: machined brass
 Bonnet: machined brass
 Piston: brass
 Inlet filter: bronze
 Seat: Kel-F®
 Seals: Viton®
 Gauges: brass

NOTE: See pages 150-166 for gas data and equipment recommendations.

HIGH PRESSURE REGULATORS

Series 3860T

DESCRIPTION

The Series 3860T high pressure regulators are designed to safely reduce inlet pressures from cylinders filled with gases to 6000 psig. The self-venting feature of the regulator allows the operator to reduce the pressure setting in a closed system by venting the downstream pressure through the regulator.

FEATURES

- Full 6000 psig delivery pressure capability.
- Available in brass or stainless steel.
- Self-venting design for ease of pressure adjustment.
- Unbalanced stem assures positive shut-off.
- Removable valve assembly module permits ease of repairs.
- Large adjusting knob provides fast low-torque pressure settings.

SPECIFICATIONS

Maximum Inlet:

brass	6000 psig
stainless steel	10000 psig

Operating temperature: 40° to 165°F.

Cv factor: 0.2

Leakage: bubble-tight

Inlet and Outlet ports: 1/4" NPT female

Weight: 5 lbs.

*Specify CGA connection when ordering.

Add prefix "NV" to model number if self-venting feature is not desired (i.e. NV3860TB-6000-677).

Self-venting feature is not recommended with flammable or toxic gases.

**Regulators fitted with a CGA connection rated for 3000 psig will have a 0-4000 psig brass, or 0-3000 psig SS inlet pressure gauge.

HIGH PURITY LOW DELIVERY PRESSURE REGULATORS

Series 3700HP

DESCRIPTION

These regulators were designed to meet the needs of applications requiring reliable low-pressure control while maintaining gas purity. They are available in single and two stage versions to meet most non-corrosive gas applications. The low pressure stage has a large sensitive aluminum-faced neoprene diaphragm to provide delivery pressures as low as 2" of water.

Single Stage Line Regulators for Non-Corrosive Gases

MATERIALS OF CONSTRUCTION

Body & Bonnet: Zinc
 Seat: Nitrile
 Diaphragm: Aluminum-faced natural rubber
 Internal parts: Steel, brass, and zinc

FEATURES

- Extremely low delivery pressures.
- Aluminum faced diaphragm for high purity applications.
- Maximum inlet pressure 250 psig.
- Diaphragm packless valve on outlet is standard.
- $C_v = 0.114$.

The Series 3700HP regulators are available in three delivery pressure ranges; 2-35" of water, and 0.8-2.7 psig and 2.7-5 psig. As a line regulator they have a maximum inlet pressure rating of 250 psig. Inlet and outlet connections are 1/4" NPT female. The Series 3700HP has an aluminum faced natural rubber diaphragm to provide a diffusion resistant metal barrier for high purity gas applications. If you do not desire the outlet valve ad suffix "NV" to the part number.

HOW TO ORDER

Model Number	Del. Press. Range psig	Del. Press. Gauge psig	Inlet Press. Gauge psig
3701HP	2-25" water	0-30" water	none
3702HP	2.7-5 psig	0-10 psig	none
3703HP	0.8-2.7 psig	0-3 psig	none

Two-stage High Purity Regulators for Low Pressure Delivery

When source gas pressures exceed 250 psig, this hybrid regulator created by coupling a Series 3700HP regulator with a Series 3101 single stage regulator is an ideal choice for such higher pressure applications

MATERIALS OF CONSTRUCTION

First Stage See model 3101 on page 26
 2nd Stage See above

GENERAL PURPOSE LOW DELIVERY PRESSURE REGULATORS Series 3700

DESCRIPTION

These regulators were designed to meet the needs of applications requiring reliable low-pressure control of non-high purity gases. They are available in single and two stage versions to meet most non-corrosive gas applications. The low pressure stage has a large sensitive neoprene diaphragm to provide delivery pressures as low as 2" of water.

Single Stage Line Regulators for Non-Corrosive Gases

MATERIALS OF CONSTRUCTION

Body & Bonnet: Zinc
 Seat: Nitrile
 Diaphragm: Natural rubber
 Internal parts: Steel, brass, zinc

The Series 3700 regulators are available in three delivery pressure ranges; 2-35" of water, and 0.8-2.7 psig and 2.7-5 psig. As a line regulator they have a maximum inlet pressure rating of 250 psig. The inlet and outlet connections of the regulator are 1/4" NPT female, but with the standard needle valve installed the outlet connection is 1/4" NPT male. If you do not desire the outlet valve add suffix "NV" to the part number.

FEATURES

- Extremely low delivery pressures.
- Large sensitive diaphragm for reliable pressure control.
- Maximum inlet pressure 250 psig.
- Needle valve on outlet is standard.
- $C_V = 0.114$.

HOW TO ORDER

Model Number	Del. Press. Range psig	Del. Press. Gauge psig	Inlet Press. Gauge psig

Two-stage General Purpose Regulators for Low Pressure Delivery

When source gas pressures exceed 250 psig, this hybrid regulator created by coupling a Series 3700 regulator with a Series 2401 single stage regulator is an ideal choice for such higher pressure applications.

MATERIALS OF CONSTRUCTION

First Stage: See model 2401 on page 44
 2nd Stage: See above.

HOW TO ORDER

2401HY3703-CGA*	0.8-2.7 psig	0-3 psig	0-4000 psig

*Specify CGA connection when ordering. If you do not desire the standard outlet valve add the suffix "NV" to the part number.

GENERAL PURPOSE NON-CORROSIVE GAS 1-STAGE REGULATOR Series 2400

DESCRIPTION

The Series 2400 single stage regulators are specifically designed as an economical instrument for use in non-critical applications involving inert and non-corrosive gases. They are particularly suited to closely monitored applications. The neoprene diaphragm provides good sensitivity for pressure control. The Series 2400 should not be used in applications where inboard diffusion of atmospheric impurities water and oxygen or the outgassing of hydrocarbon based impurities will negatively impact the work being performed.

FEATURES

- Neoprene diaphragm for sensitive pressure control.
- Needle valve installed in outlet.
- One piece encapsulated seats.

APPLICATIONS

The Series 2400 regulators are ideal for use with inert, flammable, and hydrocarbon gases used in non-critical specialty gas applications.

MATERIALS OF CONSTRUCTION

Body: brass
 Nozzles: brass
 Seats: PTFE Teflon
 Diaphragms: neoprene
 Inlet Filter : nickel plated sintered bronze - 10 micron

SPECIFICATIONS

Max. Inlet Pressure: 3000 psig
 Operating Temp. Range: 0° to +140° F
 Body Inlet and Outlet: 1/4" NPT female
 Valve outlet : 1/4" NPT male
 Flow coefficient: $C_V = 0.17$

NOTE: See pages 150-166 for gas data and equipment recommendations.

GENERAL PURPOSE NON-CORROSIVE GAS 2-STAGE REGULATOR Series 2420

DESCRIPTION

The Series 2420 two-stage regulators are specifically designed as an economical instrument for use in non-critical applications involving inert and non-corrosive gases. They are particularly suited to applications which will not be closely monitored and a constant delivery pressure is required from full to empty cylinder. The neoprene diaphragm provides very sensitive pressure control. The Series 2420 should not be used in applications where inboard diffusion of atmospheric impurities water and oxygen or the outgassing of hydrocarbon based impurities will negatively impact the work being performed.

FEATURES

- Neoprene diaphragm for sensitive pressure control.
- Needle valve installed in outlet.
- One piece encapsulated seats.

APPLICATIONS

The Series 2420 regulators are ideal for use with inert, flammable, and hydrocarbon gases used in non-critical specialty gas applications when constant delivery pressure is required from full to empty cylinder.

MATERIALS OF CONSTRUCTION

Body: brass
 Nozzles: brass
 Seats: PTFE Teflon
 Diaphragms: neoprene
 Inlet Filter : nickel plated sintered bronze - 10 micron

SPECIFICATIONS

Max. Inlet Pressure: 3000 psig
 Operating Temp. Range: 0° to +140° F
 Body Inlet and Outlet: 1/4" NPT female
 Valve outlet: 1/4" NPT male
 Flow coefficient: $C_v = 0.15$

LASER CUTTING PRESSURE REGULATOR

Series 3870H

DESCRIPTION

The 3870H regulator is specifically designed to meet the high flow, high pressure assist gas requirements of the laser cutter. It has fast on-off-on response, high flow capacity, and delivers the pressures required for the job. Whether your source gas is cryogenic or high pressure, this regulator can handle the job. The regulator is actually two regulators in one body – a dome-loaded piston regulator with a sensitive diaphragm actuated dome loader built in.

FEATURES

- Rapid on-off-on response even at high flow rates.
- 1/2" NPT female inlet and outlet connections.
- High flow capacity Cv = 0.55.
- Minimal delivery pressure decay (0.3 psi/100 psi).
- Built-in dome loader regulator.
- Bonnet threaded to accept panel nut.
- Encapsulated seats with 10 micron filter.

SPECIFICATIONS AND MATERIALS OF CONSTRUCTION

Max. inlet pressure	3000 psig (optional 5500 psig available)
Outlet Pressure Ranges	0-250 psig, 0-500 psig, 0-1000 psig
Inlet and Outlet ports	1/2" NPT female
Inlet and Outlet Gauge Ports	1/4" NPT female
Body	brass
Dome Loader Diaphragm	PTFE Teflon® coated neoprene
Seat & seals	PTFE Teflon®

LASER WELDING GAS SUPPLY SYSTEMS

DESCRIPTION

Each of the manufacturers of laser gas welding systems has their own specifications for the gas transfer system. The systems presented here generally meet or exceed the requirements of virtually all of the manufacturers. The manual, semi-automatic, and fully automatic systems have worked very successfully in many laser applications and contain all of the basic components required to protect the laser and maintain gas purity and flow. If for any reason, one of these systems does not meet your requirements contact us to discuss a custom system that is correct for your laser.

FEATURES

- All high purity construction.
- Purge assemblies installed on each pigtail to ensure cylinder-to-cylinder purity on change-outs. (Cylinder connections with integral check valves in place of purge assemblies are available as an option.)
- Built-in safety relief valve prevents laser over pressurization.
- Built-in 2 micron filter eliminate particulate contamination of the laser.
- Pigtails are 3' stainless steel flexible hose with stainless steel inner core to ensure contamination-free gas transfer and eliminate helium diffusion leakage.
- Convenient wall mounting bracket provided.
- High purity brass pressure regulator(s) with stainless steel diaphragms included.
- Designed to provide continuous gas flow to laser during cylinder change-outs.

SPECIFICATIONS AND MATERIALS OF CONSTRUCTION

Max. inlet pressure	3000 psig
Inlet pressure gauges	0-4000 psig
Outlet pressure range	0-100 psig
Outlet pressure gauge	0-200 psig
Safety relief valve	set @100 psig
Outlet line filter	2 micron sintered stainless steel
Body	brass
Diaphragms	stainless steel
Seats and seals	Teflon, Tefzel, or Kel-F
Pigtails	316 stainless steel with brass cylinder connections
Operating Temp.	-40 to 140°F

HOW TO ORDER

Model*	Changeover Control
917-LASER-CGA-4610	manual system with purge assemblies on pigtails
917-LASER-CV-CGA	manual system with integral check valves, but no purge assemblies
914-LASER-CGA-4610	914 semi-automatic changeover manifold (see page 69) with purge assemblies
914-LASER-CV-CGA	914 semi-automatic changeover manifold (see page 69) with integral check valves, but no purge assemblies
918TS-LASER-CGA-4610	918TS Auto-Logic II changeover manifold (see page 64) with purge assemblies
918TS-LASER-CV-CGA	918TS Auto-Logic II changeover manifold (see page 64) with integral check valves, but no purge assemblies
919TS-LASER-CGA-4610	919TS Ultra-Logic changeover manifold (see page 66) with purge assemblies
919TS-LASER-CV-CGA	919TS Ultra-Logic changeover manifold (see page 66) with integral check valves, but no purge assemblies

* Specify CGA connection when ordering.

Options**

917PS-XXX	pressure switch alarm assembly (XXX – specify pressure setting desired 300 psig recommended).
912-AVA	audio/visual alarm module for 917 gas transfer system (see page 74).
914-3B	pressure switch alarm assembly (XXX – specify pressure setting desired 300 psig recommended).
914-AVA	audio/visual alarm module for 914 changeover manifold (see page 74).

**918TS and 919TS changeover manifolds have a built-in alarm system as standard.

CRYOGENIC CONTAINER REGULATOR

Series HL3300

DESCRIPTION

This chrome plated brass single stage regulator is ideal for controlling the gaseous withdrawal from cryogenic containers.

The regulator boasts a large stainless steel diaphragm for better control and a 0.37 Cv to provide high flow if required.

FEATURES

- Available in three delivery pressure ranges, 0-125, 0-350, and 0-500 psig.
- Maximum inlet pressure – 3000 psig.
- One-piece encapsulated seat design with 10 micron filter to protect seat from particulate contamination.
- Inlet is required CGA connection or 1/4" NPT female.
- Outlet connection 1/4" NPT female.
- Cv = 0.37.

MATERIALS OF CONSTRUCTION

Body: Chrome plated brass forging

Bonnet: Chrome plated brass forging

Diaphragm: 302 stainless steel

Nozzle: brass

Seat & seals: PTFE Teflon

Filter: nickel plated sintered bronze

Seat return spring: PH 17-7 stainless steel

HOW TO ORDER

Model Number	Del. Press. Range psig	Del. Press. Gauge psig
HL3300-125-CGA*	0-125	0-200
HL3300-350-CGA*	0-350	0-400
HL3300-500-CGA*	0-500	0-1000

* For line regulator use with 1/4" NPT female inlet and outlet substitute "P4FF" for CGA.

OPTIONS:

1/4" compression outlet add "T4FS" to P/N.

SILENCED CRYOGENIC SAFETY RELIEF VALVE

Series 8636 Whisper Valve®

DESCRIPTION

The Whisper Valve is a silenced safety device for use with cryogenic containers.

The valve solves the problem of the loud noise, over 100 dB, associated with the activation of the relief valve in cryogenic containers containing nitrogen, argon or carbon dioxide. Many users of gas in cryogenic containers complain to their suppliers that the loud activation noise scares their employees and causes work disruptions and results in damaged product.

The Whisper Valve is easily installed on the vent valve of any cryogenic container and silently relieves the container pressure slightly below the normally installed relief valve. Whisper Valve reduces the relief of gas pressure to a noise level of 40-50 dB under normal conditions. For reference the average library noise level is 40 dB.

The Whisper Valve also reduces the gas losses of your cryogenic container to average of less than 48 cubic feet over 24 hours.

Whisper Valves are available in four settings, 22, 230 psig, 350 psig, and 500 psig. Other settings available on request.

FEATURES

- Reduces cryogenic relief valve blow-off noise to 40-50 dB.
- Easily installs on any cryogenic argon, oxygen, or nitrogen container.
- Available in four ranges to prevent most container noisy blow-offs.
- Reduces gas losses to less than 48 cubic feet per 24 hours.
- Convenient wall mount kit available.
- Standard CGA 295 inlet connection for nitrogen and argon.
- CGA 440 inlet connection for oxygen.

HOW TO ORDER

Model Number	Description
8636-22	Whisper valve for cryogenic containers with 22 psig relief setting
8636-230	Whisper valve for cryogenic containers with 230 or 235 psig relief setting
8636-350	Whisper valve for cryogenic containers with 350 psig relief setting
8636-500	Whisper valve for cryogenic containers with 500 psig relief setting
8636-KIT	Wall mount bracket, panel mount nut, and six-foot hose with CGA 295
8636-02-22	Whisper valve for cryogenic containers of oxygen with 22 psig relief setting
8636-02-230	Whisper valve for cryogenic containers of oxygen with 230 or 235 psig relief setting
8636-02-350	Whisper valve for cryogenic containers of oxygen with 350 psig relief setting
8636-02-500	Whisper valve for cryogenic containers of oxygen with 500 psig relief setting
8636-02-KIT	Wall mount bracket, panel mount nut, and six-foot hose with CGA 440

* Also available for CO₂.

WHISPER VALVE TAKES THE POP OUT OF CRYOGENIC SAFETIES

LECTURE BOTTLE EQUIPMENT

Due to the small size and limited contents of lecture bottles, special equipment is recommended for use. This special equipment is described here and on the following page.

LECTURE BOTTLE REGULATORS SERIES 3900

The Series 3910 regulator is designed for use with non-corrosive, non-toxic gases in lecture bottles. The Series 3920 lecture bottle regulator is designed for use with corrosive, and/or toxic lecture bottle gases. These light weight, compact single stage regulators incorporate many features found in our larger high purity regulators.

FEATURES

- Small compact design.
- Needle valve installed on outlet.

LECTURE BOTTLE EQUIPMENT

LECTURE BOTTLE HOLDERS

Lecture bottles have rounded ends and require some means of support when in use. We provide two types of holders here that meet most requirements.

NON-TIP STAND - MODEL 475

This stand offers a convenient method of securing a lecture bottle on a table or lab bench. The stand is made of light weight brushed aluminum and, yet the large diameter base provides stability even when a regulator is installed on the bottle.

475

WALL MOUNT LECTURE BOTTLE BRACKET MODEL 480

This bracket is made of anodized aluminum and has spring clips that provide firm, secure support to the lecture bottle. The bracket is ideal for securing lecture bottles to lab cart or bench set-ups, in carrying cases for portable systems, or in storage cabinets.

LECTURE BOTTLE CONTROL VALVES

These valves are specifically designed for attachment to lecture bottles to dispense their contents. They do not control pressure and should only be used when the operator is in attendance.

GAS CONTROLS FOR DISPOSABLE CYLINDERS

Series 3962 –

Stainless Steel Fixed Flow Regulator for Corrosive Gases

DESCRIPTION

These compact regulators are designed to provide a constant fixed flow rate of gas mixtures containing corrosive gas components from disposable cylinders fitted with a C-10 connection. If required they can also be provided with a standard CGA connection for other types of cylinders.

FEATURES

- Built-in on/off valve.
- Integral inlet and outlet connections provide convenient compact size.
- Outlet orifice and preset delivery pressure provide specific flow rate when on/off valve is opened.
- Pressure gauge monitors cylinder pressure.
- 40 micron inlet filter.

SPECIFICATIONS

Inlet pressure: 1000 psig max. with C10
 3000 psig max. with CGA connection
 Operating temperature: 0° to 160°F
 Inlet connection: C-10 (5/8"-18 UNF)
 Outlet connection: 3/16" hose barb
 Cylinder pressure gauge: 1200 psig with C10
 0-3000 psig with CGA connection

MATERIALS OF CONSTRUCTION

Body: stainless steel
 Piston: stainless steel
 Seat: Teflon®
 Seals: Viton®
 Gauge: stainless steel

HOW TO ORDER

Model No.*	Pre-Set Flow Rate
3962-02	0.25 liters/min
3962-05	0.50 liters/min

*If standard CGA connection is desired add CGA connection number to the model number, i.e. 3962-15-180.

GAS CONTROLS FOR DISPOSABLE CYLINDERS

Series 3970 –Regulator for Non-Corrosive Gases

DESCRIPTION

These compact regulators are designed to provide a constant fixed flow rate of non-corrosive gases and mixtures from disposable cylinders fitted with a CGA 600 outlet connection. They provide both pressure and flow control. When regulator is supplied without 1/4" flow control hose barb the 3970 is an adjustable pressure regulator.

FEATURES

- Adjustable delivery pressure.
- Integral needle valve for shut-off and to control flow.
- Integral CGA 600 connection provides compactness and minimal loss of gas during installation and removal.
- 0-300 psig inlet pressure gauge to monitor cylinder pressure.

SPECIFICATIONS

Inlet pressure: 300 psig max.

Operating temperature: 0° to 160°F

Inlet connection: CGA 600

Outlet connection: 1/4" NPT female or
1/4" hose barb with flow control orifice

Cylinder pressure gauge: 0-300 psig

Cv = 0.04

MATERIALS OF CONSTRUCTION

Body: aluminum

Diaphragm: neoprene

Seat: neoprene

CGA gasket: composite cork

Gauge: stainless steel case, brass connection

HOW TO ORDER

3970	0-60	1/4" NPT female
3970HB	0-60	1/4" hose barb with flow control orifice

ADJUSTABLE FIXED FLOW REGULATOR

Series 3980

DESCRIPTION

The 3980 series provides the control of the single fixed flow regulators with the advantage of being able to change flow rates as required for different applications. This regulator eliminates the need to have multiple regulators on-site. There are models suitable for use with non-corrosive gases and mildly corrosive gases. Commonly called the “click” regulator it has 12 flow positions, OFF, 0.3, 0.5, 1.0, 1.5, 2.0, 2.5, 3.0, 5.0, 6.0, 7.0, and 8.0 slpm. NOTE: Flow rates are estimated. Actual flow rates will vary depending on gas service and pressure.

FEATURES

- 12 fixed flow settings.
- 0-3000 psig cylinder pressure gauge.
- Max. inlet pressure 3000 psig.
- Available with standard C-10 (5/8”-18 UNF) or a standard CGA cylinder connection.
- 3/16” hose barb outlet.
- 40 micron inlet filter.

MATERIALS OF CONSTRUCTION

3981	3982

*Specify CGA connection when ordering.

DEMAND FLOW REGULATOR

Series 3950

DESCRIPTION

This new single stage design using balanced valve stem technology is more sensitive than older two stage technologies providing a better performance even with high inlet pressures. This regulator is designed for use with instruments that use a pump to draw the calibration gas into the instrument. The 3950 series demand flow regulator provides the exact amount of calibration gas the instrument pump requires. This simple to use regulator makes calibration quick and easy by eliminating the need for sample bags, flowmeters, or special operator training.

FEATURES

- Precise delivery of calibration gas required by instrument pump.
- New single stage balanced valve stem technology.
- Simple easy to use operation.
- Various cylinder connections available: C-10, CGA 600, other CGAs.
- 40 micron inlet filter.

SPECIFICATIONS

Outlet hose barb for 3/16" ID hose

Flow 0-3 slpm @ 3" of H₂O vacuum

Inlet pressure gauge: 0-3000 psig with GCA connection

0-1200 psig with C10 connection

SPECIALTY APPLICATION POINT OF USE PANELS

Mass Spec Distribution Panel Model 22660

DESCRIPTION

This panel provides mass spec users with all the necessary gas handling equipment to properly install and operate their new mass spectrometer. The gas distribution panel provides all of the necessary controls to feed both air and nitrogen to the mass spec at the proper pressures for optimum operation. The valve arrangement provides the user with the option of using nitrogen for all the functions instead of air for the exhaust gas, Gas 1 and Gas 2 functions in the event that compressed air is not available. The panel is compact and easy to install. Simply mount the panel at a convenient location and connect your gas lines using the compression fittings provided.

FEATURES

- Total high purity gas construction.
- Brass high purity line regulators.
- HL3300-125-580 regulator included for LN2 container.
- Diaphragm valves.
- Valved for use with air and nitrogen or nitrogen only.
- 1/4" OD compression fitting outlet connections.
- 50 feet of 1/4" polyethylene tubing.
- System is mounted on a 23" high x 12" wide x 1/2" thick HDPE panel.

Generator Backup Panel Model 22687

DESCRIPTION

This panel is designed to automatically provide a reserve supply to a gas generator in the event of a power loss, or the generator cannot provide sufficient gas to the system. The system may be used with air, hydrogen, or nitrogen generators and are available constructed of brass or stainless steel. An alarm option is available.

FEATURES

- High purity two stage regulator to ensure constant delivery pressure as required.
- Stainless steel inner core flexible 3' pigtails with cylinder connections having integral check valves.
- Provided on a stainless steel wall mounting bracket.

HOW TO ORDER

POINT OF USE PANELS

Multiple Source Panels

Series 223

Point of use panels provide a convenient organized method to deliver gas to your laboratory instruments or systems whether from a single source or multiple sources while providing individual pressure control for each application.

FEATURES

- High purity brass or stainless steel line regulators.
- Individual inlets and outlets for each regulator.
- Horizontal or vertical configuration.
- HDPE panel.
- Inlet and outlet connections 1/4" stainless steel compression fittings.

HOW TO ORDER

223M-X- PPP

- M = 1 for brass
4 for stainless steel
- X = H for horizontal configuration
V for vertical configuration
- Y = number of regulators
- C = center inlet
- PPP = delivery pressure of each regulator on the panel.
Show the range code for each regulator in order from top to bottom or left to right.
25 for 0-25 psig
50 for 0-50 psig
100 for 0-100 psig
150 for 0-150 psig

Example:

2231-H-25-25-50-100 describes a brass four-regulator panel in the horizontal orientation with the first regulator on the left having a 0-25 psig delivery pressure range followed in order by three others: 0-25 psig, 0-50 psig, and 0-100 psig.

CUSTOM SYSTEMS

Most of the components in this catalog are used in combination with other components in their final application. Often it is convenient to combine these components on a panel, in a cabinet, or some other system configuration prior to the shipment of the components. This service offers convenience and often saves both time and money while ensuring that the user has all of the capability he requires when the product is received.

To take advantage of this service provide us with a flow sketch of the system and a brief written commentary of the system requirements; pressures, flow rates, gas, desired materials of construction, purification requirements, etc. or contact our technical service personnel to discuss your needs.

Some typical systems are shown on this page.

LEAK-TECTOR™ TESTING SOLUTION

DESCRIPTION

Leak-Tector is specially formulated for testing lines, cylinders, and systems carrying oxygen and other compressed gases for leaks. The formulation contains no oil, grease, fatty acids, ammonias, or any other ingredient that could combine with pure oxygen to form either a flammable or explosive mixture.

Leak-Tector is simple to use. Apply the solution to a connection or surface suspected of leaking and watch for bubble clusters. Large leaks form large bubble clusters. Very fine leaks form white foam that builds up for several minutes, making detection easy and certain. Solution dries clean with no greasy residue and does not need to be removed after testing. Tests have shown that Leak-Tector clearly detects leaks as small as one pound of gas in 100 years, a leak rate of 1.16×10^{-4} cc/sec of nitrogen.

Leak-Tector is available in convenient 8 oz. squeeze bottles or 1 gallon containers.

SPECIFICATIONS

Temperature range: +35° to +160°F

Meets Air Force Spec. MIL-L-25567

HOW TO ORDER

Model	Description
LT-8	8 oz squeeze bottle of Leak-Tector
LT-8X12	case of 12 8 oz bottles of Leak-Tector
LT-1G	one gallon bottle of Leak-Tector
LT-1GX4	case of four one gallon bottle of Leak-Tector

LOW GAS PRESSURE ALARM

Series 9900

DESCRIPTION

The Series 9900 complies with the requirements of NFPA 99 2002 paragraph 5.1.10.5.5 that mandates the continuous monitoring of purge gas while welding or brazing gas lines.

These alarms are ideal for any gas application where a decrease in gas pressure could be detrimental to the operation.

Rated for 3000 psig the Series 9900 can be installed between the cylinder valve and the user's pressure regulator or system. At low pressure, the Series 9900 provides both an audible and visual alert to the user when the container pressure reaches the pre-set level. Units are available in brass or stainless steel with the appropriate CGA connections for easy installation between an existing cylinder and regulator, or with pipe threads or compression fittings for permanent installation into a gas supply system.

Standard models require 110 VAC power. For remote locations or where power is not readily available there are battery-powered models that operate on a standard 9V battery.

FEATURES

- Wide range of alarm pressure selection.
- Available in brass or stainless steel.
- Available with CGA connections or 1/4" NPT female inlet and outlet.
- Complies with the requirements of NFPA 99 2002 paragraph 5.1.10.5.5.
- Choice of power source – 110 VAC, 9V battery.
- Provides both an audio (~90 dB @ 10 feet) and a visual alarm.
- Mating inlet and outlet connections.

Regulator sold separately.

HOW TO ORDER

(Replace the PSI in P/N with the desired activation pressure.)

Model Number	Description
9910-PSI-CGA	110 VAC brass unit with audio/visual alarm and silence button
9911-PSI-CGA	9 volt brass unit with audio/visual alarm and on/off switch (no silence button)
9910-PSI-P4FF	110 VAC brass unit with audio/visual alarm and silence button – 1/4" NPTF
9911-PSI-P4FF	9 volt brass unit with audio/visual alarm and on/off switch (no silence button)
9920-PSI-CGA	110 VAC SS unit with audio/visual alarm and silence button
9921-PSI-CGA	9 volt SS unit with audio/visual alarm and on/off switch (no silence button)
9920-PSI-P4FF	110 VAC SS unit with audio/visual alarm and silence button – 1/4" NPTF
9921-PSI-P4FF	9 volt SS unit with audio/visual alarm and on/off switch (no silence button)

CHANGEOVER MANIFOLD TUTORIAL

Many applications require a continuous supply of gas to the process, stopping the flow of gas during operations to replace empty cylinders is not an option. The laser welding operation is a perfect example of an application that may operate on a single 8 hour shift basis but requires continuous flow throughout the operating period. Stopping production to replace empty cylinders can be costly – time is money.

There are many other applications where the flow of gas must be maintained 24/7. Helium for gas chromatographs and carbon dioxide for incubators are two simple, but good examples where loss of gas flow can have very unwelcome results. These applications require continuous flow for long periods of time not only during working hours, but when the system is unattended in the evening and during weekends and holidays. Running a gas chromatograph out of helium carrier gas can result in costly repairs and days without analytical results. An incubator without carbon dioxide can result in destroyed samples and the loss of years of research.

WHAT IS A CHANGEOVER MANIFOLD?

A changeover manifold is a system of valves and pressure regulators that delivers gas to a process without gas flow interruption. Most changeovers consist of a regulator scheme that reduces the pressure in two stages to achieve a constant outlet pressure.

Users should be aware that there are systems offered that do not provide two stages of pressure reduction and that the resultant outlet pressure will fluctuate considerably as the system operates, thus requiring the addition of a line regulator downstream from the changeover to provide a consistent pressure to the process.

SELECTION CRITERIA FOR CHANGEOVER MANIFOLDS

Each application has a different set of operating parameters that must be evaluated and satisfied. Let's take a look at some key parameters that users need to understand when selecting a changeover manifold.

1. Automatic or semi-automatic? What's the difference?

Some suppliers use semi-automatic and automatic interchangeably when describing a changeover manifold. In fact, they are two distinctly different systems.

A **semi-automatic** changeover normally operates by opposing pressure differential. It switches from the "in-service" side to the "reserve" side automatically, but requires an action by the operator to switch it back from the new "in-service" side to the "reserve side." Typically this is accomplished by flipping a knob, a lever, or operating a series of valves after replacing the empty cylinders. The model 914 and 916 are typical semi-automatic changeovers.

An **automatic** changeover manifold functions electronically. The only action required by an operator for this unit to reverse the changeover is to replace empty cylinders and to

re-pressurize the depleted side. The model 918TS and 919TS are typical fully automatic changeovers.

2. The gas supply source is important.

The gas supply source to a changeover may include any combination of the following:

- A standard high pressure cylinder, such as nitrogen or helium,
- A cylinder of liquefied gas, such as carbon dioxide,
- A six pack, 12 pack, manifold of cylinders,
- A cryogenic container of argon, nitrogen, oxygen, or carbon dioxide,
- A tube trailer,
- A bulk storage tank.

While you have all of the above choices and perhaps others, your choice of gas source drives your choice of changeover manifolds. If high pressure cylinders are always to be your source, you have the choice of virtually any automatic or semi-automatic changeover system. Substitute a cryogenic container on one side with a high pressure source on the other side and your choices narrow depending on the operating parameters of delivery pressure and flow.

Automatic changeovers like the **AUTO-LOGIC II** and **ULTRA-LOGIC** allow the user to start with high pressure cylinders on both sides, and then expand to a cryogenic source on one side and a high pressure source on the other side. If even higher consumption rates become required, users can easily switch to cryogenic sources on both sides. The automatic changeover may have a higher upfront cost but be more economical in the long term.

3. What is the maximum required flow?

This is often the most difficult parameter for the user to specify. Knowing the maximum flow is important for two reasons. First, you must ensure that the changeover has sufficient capacity to feed the process. A greatly oversized changeover may lead to premature failure. Second, you must ensure that the gas sources are sufficient to meet the operating parameters of the application.

4. Determine the desired gas source change out frequency.

To determine the gas source frequency change out time, consider the flow rate, the total hours of operation, and the time period to obtain full containers to replace the empty side of the changeover.

SUMMARY

Whatever your requirements, be sure to consider all of the elements in choosing your changeover manifold. Proper planning up front will provide benefits and smooth operations for many years. It is a good idea to discuss your application details with your supplier to ensure that you choose the correct changeover manifold with respect to your application.

AUTO-LOGIC® II FULLY AUTOMATIC ELECTRONIC TOUCH SCREEN CHANGEOVER MANIFOLD

DESCRIPTION

This advanced electronically operated 918 Series AUTO-LOGIC II changeover manifold is truly fully automatic. It provides the user with simple, intuitive operation via a color touch screen – no buttons to push and no knobs to turn. Like its forerunner, the AUTO-LOGIC, users can switch from high pressure cylinders on both sides to low pressure cryogenic containers on one side and high pressure cylinders on the other side, or cryogenic containers on both sides with just a few screen touches. Once you have set the operating parameters, you need only change cylinders as necessary. The system takes care of everything else. There is no need to make pressure adjustments or flip a knob after the system has switched from one side to the other. Just replace the empty cylinders and open the valves. The system is now set to change in the opposite direction. These systems are truly automatic and hassle free. The AUTO-LOGIC II capabilities provide customers with the best changeover system to suit their current operation and future expanded requirements without having to buy another system.

The 918TS is available constructed with brass or stainless steel high purity gas components. It has digital pressure readouts for inlet pressures and outlet delivery pressure, built-in alarms, and dry contacts to operate external equipment, such as remote alarms or an auto-dialer. Entire system is housed in a NEMA 4X enclosure.

FEATURES

- Fully automatic, simple, hassle free operation via a color touch screen.
- Constant digital and graphic gas supplies on both sides.
- Delivery pressure monitor displays any unusual variances.
- High and low adjustable delivery pressure alarm settings .
- Designed for high purity gas service.
- May be used with any type gas source.
- “Leak-Check” monitoring alerts the user to low reserve side pressure of either high pressure or cryogenic containers while in standby via audible and visual alarms.
- “Gas-Check” feature ensures efficient use of gas supplies when cryogenic containers are in service.
- Built-in audio and visual alarm.
- External dry contacts provided to activate optional equipment or remote alarms.
- System housed in a NEMA 4X enclosure.
- Available in either brass or stainless steel construction.

SPECIFICATIONS

Max inlet pressure: 3000 psig

Power required: 120 VAC/60Hz

Outlet connection: 1/2” NPT female

Inlet connections: 1/4” NPT female*

* When unit is ordered with accompanying pigtailed the inlet connections will be the mating CGA connection of the pigtail.

AUTO-LOGIC® II FULLY AUTOMATIC ELECTRONIC TOUCH SCREEN CHANGEOVER MANIFOLD *CONTINUED*

HOW TO ORDER

Model	Description	Delivery Pressure
918TS-1-200	brass electronic high purity changeover manifold	25-200 psig
918TS-2- 200	stainless steel electronic high purity changeover manifold	25-200 psig

Options

- 918TSE-email notifies recipient that a changeover has occurred. (Provide email address when ordering.)
- 912-AVA audio/visual alarm module for remote alarm
- AVD-45B auto dialer
- 914/918-HUB - this hub device allows for multiple dry contact connections to operate auxiliary devices

Pigtails for 918TS Changeover Manifolds (2 per set)

For Brass Manifolds

918-FPB601-Y-CGA*	two flexible Teflon lined stainless steel braided pigtails with brass fittings and no check valves
918-FPB601-Y-CV-CGA*	two flexible Teflon lined stainless steel braided pigtails with brass fittings and check valves
918-FPB604-Y-CGA*	two flexible all stainless steel braided pigtails with brass fittings and no check valves
918-FPB604-Y-CV-CGA*	two flexible all stainless steel braided pigtails with brass fittings and check valves

For Stainless Steel Manifolds

918-FP604-Y-CGA*	two flexible all stainless steel braided pigtails without check valves
918-FP604-Y-CV-CGA*	two flexible all stainless steel braided pigtails with check valves

* Specify CGA connection when ordering.

Y = pigtail length in feet.

WARNING: The standard 919TS changeover unit is not suitable for use with flammable or corrosive gases. Units are available for use with a flammable, toxic, or corrosive gas. Such units are designed specifically for the intended gas to be controlled. Please contact us to discuss your specific requirement.

ULTRA-LOGIC® – ADVANCED FULLY AUTOMATIC ELECTRONIC TOUCH SCREEN CHANGEOVER MANIFOLD

Series 919TS

DESCRIPTION

The 919 Series Ultra-logic changeover manifold is an advanced version of the AUTO-LOGIC II. It provides the user with simple, intuitive operation via a color touch screen – no buttons to push and no knobs to turn. Like its forerunner, the AUTO-LOGIC II, users can switch from high pressure cylinders on both sides to low pressure cryogenic containers on one side and high pressure cylinders on the other side, or cryogenic containers on both sides with just a few screen touches. Once you have set the operating parameters, you need only change cylinders as necessary. The system takes care of everything else. There is no need to make pressure adjustments or flip a knob after the system has switched from one side to the other. Just replace the empty cylinders and open the valves. The system is now set to change in the opposite direction. These systems are truly automatic and hassle free.

The additional Ultra-logic capabilities provide customers with the best changeover system to suit their current operation and future expanded requirements without having to buy another system.

The 919TS is available constructed with brass or stainless steel high purity gas components. It has digital pressure readouts for inlet pressures and outlet delivery pressure, built-in alarms, and dry contacts to operate external equipment, such as remote alarms or an auto-dialer. Entire system is housed in a NEMA 4X enclosure.

FEATURES

- Fully automatic, simple, hassle free operation via a large color touch screen.
- Can be controlled via network.
- Provides full data logging capability for all functions to aid in 21CFR11 compliance.
- Operating parameters are password protected for multiple users.
- Constant digital and graphic gas supplies for both sides.
- Delivery pressure monitor displays any unusual variances.
- High and low adjustable delivery pressure alarm settings.
- Designed for high purity gas service.

- May be used with any type gas source.
- “Leak-Check” monitoring alerts the user to low reserve side pressure of either high pressure or cryogenic containers while in standby via audible and visual alarms.
- “Gas-Check” feature ensures efficient use of gas supplies when cryogenic containers are in service.
- Built-in audio and visual alarm.
- External dry contacts provided to activate optional equipment or remote alarms.
- System housed in a NEMA 4X enclosure.
- Available in either brass or stainless steel construction.

SPECIFICATIONS

Max inlet pressure: 3000 psig
 Power required: 120 VAC/60Hz
 Outlet connection: 1/2” NPT female
 Inlet connections: 1/4” NPT female*

HIGH PURITY SEMI-AUTOMATIC CHANGEOVER MANIFOLD Series 913

DESCRIPTION

The 913 Series is an upscale version of the 914 Series semi-automatic changeover manifold. Like the 914 it is constructed of high purity components and is suitable for use in both high purity and general purpose applications. Using pressure differential to change from the empty supply side of the changeover, to the full supply side of the changeover these manifolds can provide an uninterrupted supply of gas to your instrumentation or process. Units are available in both brass and stainless steel construction.

The units are housed in a NEMA4X box and are suitable for both indoor and outdoor installations. The box houses the gas controls, electronic control module, a pre-set safety relief valve with vent port with a 1/4" NPT female outlet connection. Status lights on the front provide for easy monitoring of gas supplies to the application (Green for full and Red for empty). The outlet connection is 1/2" NPT female. A 110 VAC power cord is provided. The package is completed with a set of two 3' stainless steel inner core flexible hose pigtailed with check valves installed in the CGA cylinder connections.

Remote alarm functionality requires the specially designed 913-AVA alarm module powered by the base unit. The 913 or the 913-AVA will not work with any other alarm system.

SPECIFICATIONS

Max. inlet pressure	3000 psig
Inlet ports	1/4" NPT female*
C _v	0.08 standard (0.2 optional)
Operating temperature	-40° to +165°F
Weight	28 lbs.

* When unit is ordered with accompanying pigtailed the inlet connections will be the mating CGA connection of the pigtail.

HIGH PURITY SEMI-AUTOMATIC CHANGEOVER MANIFOLD Series 914

DESCRIPTION

The Series 914 semi-automatic changeover manifold is another solution for providing an uninterrupted supply of gas to your instrumentation or process. It incorporates a specially machined two-regulator in one body that simplifies changeover operation and reduces the wall space required. The feed and line regulators are of high purity construction with stainless diaphragms and diffusion resistant construction capable of passing a helium leak rate test of 1×10^{-9} .

Available in both brass and 316SS construction, the 914 Series is provided complete with changeover regulator and line regulator installed on a mounting bracket for easy installation.

Pigtails and/or manifold sections are ordered separately.

The manifold is assembled using the 914 central control section shown on this page and two manifold sections from pages 48 and 49 or a pigtail set from the list below to provide the supply banks. A simple two station semi-automatic manifold commonly used to ensure a continuous supply of carrier gas to a gas chromatograph employs a central control section with a pigtail installed on both inlets.

SPECIFICATIONS

Max. inlet pressure	3000 psig
Inlet and Outlet ports	1/4" NPT female*
C _v	0.08 standard (0.2 optional)
Operating temperature	-40° to +165°F
Weight	7.75 lbs.

* When unit is ordered with accompanying pigtails the inlet connections will be the mating CGA connection of the pigtail.

HOW TO ORDER

Model**	Description
Brass Central Control Section (header only - no pigtails)

Pigtails Sets for Stainless Steel Changeover Manifolds (2 per set)

914-FP604-Y-CGA*	two flexible all stainless steel braided pigtails without check valve
914-FP604-Y-CV-CGA*	two flexible all stainless steel braided pigtails with check valve

*Specify CGA connection when ordering.

Y = pigtail length in feet.

914 AVA

ECONOMICAL HIGH PURITY SEMI-AUTOMATIC CHANGEOVER MANIFOLD

Series 916 BX

The 916 BX Series semi-automatic changeover manifold provides an economic solution for providing an uninterrupted gas supply to your instrumentation or process when the working environment requires the changeover to be enclosed. The entire system is housed in a NEMA4x box. Available in brass or 316 stainless steel, the 916 Series offers the convenience of a simple flip knob to readjust pressures after a changeover and a line regulator to ensure a constant delivery pressure to your system.

A pressure switch alarm assembly is available to notify the user that a changeover has taken place, the manifold needs to be set to switch the other way, and the empty cylinders should be changed.

The system can simply be used with one pigtail on each side, or connected to larger manifolds such as those shown on pages 59 and 60. Pigtails and/or manifolds sections are ordered separately.

SPECIFICATIONS

Max. Operating Press.	3000 psig
Inlet and outlet ports:	1/4" NPT female*
Operating Temperature:	-40°F to +165°F
Flow coefficient Cv	0.08

* When unit is ordered with accompanying pigtails the inlet connections will be the mating CGA connection of the pigtail.

PROTOCOL STATIONS

Series 917

DESCRIPTION

The 917 protocol station is designed to provide a convenient way to mount virtually any pressure regulator that has a CGA connection or 1/4" NPT female inlet. The wall mounting of a regulator makes changing cylinders safer and hassle-free, while protecting the regulator from damage during the changing process because the operator handles only the flexible pigtail.

The 917 series is available in brass or 316 stainless steel in both single cylinder and double cylinder configurations. Pressure regulators are connected to the system with regular CGA cylinder connections rather than be rigidly mounted; this mounting system provides the virtual universality of the 917 and makes changing a

regulator easy should it need to be replaced for any reason. A pressure switch alarm option is available to alert users that the cylinder in use is approaching empty. When check valves are selected they are integral with the CGA connection to the cylinder. All models are rated for 3000 psig operating pressure.

The 917H protocol station is designed for use with helium and hydrogen and mixtures containing them. This model maintains the economy of the brass unit, but replaces the Teflon-lined pigtail with an all stainless steel pigtail to eliminate the diffusion of these small molecule gases through the Teflon lining.

MATERIALS OF CONSTRUCTION

MANIFOLD ALARM ACCESSORIES

912-AVA Single Point Audio/Visual Alarm Module

FEATURES

- 70 dB audio alarm.
- Red light visual alarm.
- Silence button.
- Operates on 110 VAC.

AVD-45 Auto-Dialer

FEATURES

- Dials up to four numbers when alarm is activated to notify required individuals.
- On-site programmable message.
- Requires dedicated analog phone line.
- Operates on 110 VAC.

UPS Power Battery Backup – CS350

FEATURES

- Maintains operation during power failure .
- Provides power to 918 and 919 changeovers for approximately 5 hours.
- Requires 110 VAC power source to maintain full charge while in standby and for recharging.

914-AVA Changeover Audio/Visual Alarm Module

FEATURES

- 70 dB audio alarm.
- Red light visual alarm for each side.
- Green in service light for each side.
- Silence button.
- Dry contacts for additional devices.
- Operates on 110 VAC

914/918 HUB

FEATURES

Hubs allow users to add additional devices (up to 3 per hub) to each changeover. Requires 110 VAC. For use with 914, 918, and 919 Series changeover manifolds.

912HUB

FEATURES

This hub allows the addition of up to 3 devices to be connected to the pressure switch alarm of a 917 protocol station or 9900 series low gas pressure alarm. No power required.

EXCESS FLOW VALVES

Series EFV

DESCRIPTION

The EFV Series gas valves are designed to automatically shut off the flow of gas when flow exceeds a preset level. They are used to protect systems and/or people in the event of a line failure downstream of the valve. The Series consists of three valves that are remarkably flexible to meet a broad range of applications. All valves are set at the factory to customer specifications. Each valve has a built-in slide switch or knob to quickly reset the valve once the system leak has been repaired.

Compact EFV-C
Range 30-200 psig

High Pressure EFV-HP
Range 100-3000 psig

MATERIALS OF CONSTRUCTION

Wetted Parts* = X	Seals = Y	Trip Point = Z
A = 360 Brass	V = Viton®	Specify flow rate
B = 303 SS	N = neoprene	and operating pressure
*Internal parts are 303 SS in all units	E = EPDM	

HOW TO ORDER

Model (choose X, Y, and Z from table above)

- EFV-C-P2MM-X-Y-Z
- EFV-HP-P4MM-X-Y-Z
- EFV-HP-P4FF-X-Y-Z
- EFV-HP-P4MF-X-Y-Z
- EFV-HP-P4FM-X-Y-Z
- EFV-HS-P2MM-X-Y-Z

High Sensitivity EFV-HS
Range 5-200 psig

CYLINDER CLEANROOM COVERS

Series CYL-C

DESCRIPTION

These reusable cylinder covers are suitable for use in semiconductor, pharmaceutical, food processing, and laboratory areas where cleanliness is a must. The covers are fabricated from non-woven Tyvek® and polypropylene combination with a high-grade Velcro seal. Fabrication is done in a clean room environment. The upper area is large enough to accommodate a pressure regulator or other gas control device.

HOW TO ORDER

P/N	Description
CYL-C-9.55	Clean Room cylinder cover for T, K, A, H type cylinders*

*Other sizes are available please provide cylinder dimensions.

DISPLAY PRESSURE SWITCH

DPS Series

DESCRIPTION

The DPS is the ideal combination of pressure switch and transmitter with a pressure display. The settings in combination with a comprehensive set of options make this switch suitable for a wide range of demanding applications.

FEATURES

- Analog output switchable to Volts or Ma
- Two switching outputs PNP
- Threefold overpressure resistance, measuring principle thin film on steel
- Display and electrical connection are independently rotatable 335°/343°

TECHNICAL DATA

Measuring principle	Thin film on steel	Media Temperature	-25°C...+85°C
Inlet connections	1/4" NPTM	Ambient temperature	-25°C...+85°C
Output signal	4-20mA, 0-5 VDC, 1-5 VCD 0-10 VOC, Switch ABLE mA or V	Pressure unit for display	bar, psi, MPa, kPa, m WC, mm WC
Switching output	2 transistors PNP	Logger	Ring buffer: 3518 data points Sampling time: 0.1...999.9 x, Off (0)
Accuracy @ 25 C typ.	± 0.5% FS typ.		

HOW TO ORDER

Model	Measuring Range*
DSP-0400-P4M	0-400 psig
DSP-3000-P4M	0-3000 psig

*Other pressure ranges available.

PRESSURE SWITCH

Series PS500

DESCRIPTION

The PS500 series pressure switches are designed for high pressure applications up to 3000 psig. The switch features materials of construction that are compatible with a wide variety of gases (high purity, flammable, and many corrosives).

FEATURES

- Activation switch is UL recognized.
- May be set to activate to open or close for either declining or rising pressures.

SPECIFICATIONS

Max. Inlet Pressure: 3000 psig
 Set Pressure Range: 50-500 psig
 Specify setting when ordering
 Operating Temp. range: -40°F to +140°F
 Pressure Connection: 1/4" NPT male
 Electrical Rating: 4A-250VAC
 Electrical Connection: 18" flying leads with 1/2" conduit connection

MATERIALS OF CONSTRUCTION

Body: 316 SS
 Bonnet: clear anodized aluminum
 Diaphragm: 316 SS
 Seal: Buna-N (Teflon® is an available option)

HOW TO ORDER

Model

PS500-D-XXX	activates on decreasing pressure
PS500-I-XXX	activates on increasing pressure

*Specify activation pressure when ordering.
 If optional Teflon® seal is required add suffix "T" to P/N.

PRESSURE TRANSDUCERS

Model PT825

DESCRIPTION

The PT825 pressure transducers are a very convenient way to monitor the pressure of a system electronically. They are used in a large variety of applications including process monitoring, hydraulics, HVAC, and water treatment.

SPECIFICATIONS

Output: 0-5 VDC
 Input: 13-30 VDC
 Construction: stainless steel
 Inlet Connection: 1/4" Male NPT

HOW TO ORDER

Model	Pressure Range
PT825-0400	0-400 psig
PT825-3000	0-3000 psig

MANIFOLD TUTORIAL

Manifolds are used to connect two or more cylinders of gas together to increase the supply volume available to provide a continuous flow when one cylinder is not sufficient and a tube trailer or other bulk supply is not practical. Manifolds are also used when a single cylinder of gas is not capable of supplying the required flow rate required by a process.

WARNING: Never mix gases on a manifold. Only one type of gas should be connected to a manifold.

Manifolds are commonly fabricated in a single row configuration designed for wall mounting with a row of cylinders in line beneath or in front of it. Double row manifolds and other custom configurations are available on request.

Station valves are used to isolate individual cylinders on a manifold from service. Station valves are recommended for most laboratory applications as they are a valuable back-up device in the event of a leaking pigtail or a defective check valve. It is most important that station valves used in high purity gas service be of the diaphragm packless type to maintain gas purity. Many commercial manifolds use packed valves that may cause atmospheric impurities to enter the gas stream as contaminants.

Two types of **pigtails** are used to connect cylinders to the manifold header; rigid pigtails made of brass or stainless steel tubing, or flexible made of stainless steel braided hose with either Teflon-lining or stainless steel inner core. Teflon-lined pigtails are used for routine applications, while the stainless steel inner core pigtails are used for ultra high purity applications. One special note, either rigid pigtails or stainless steel inner core flexible pigtails are recommended for helium and hydrogen because these gases will diffuse through the wall of a Teflon®-lined pigtail.

Check valves on the cylinder end of each pigtail should always be installed on manifolds used for flammable, toxic, or corrosive gases. In some cases purge assemblies are installed to ensure that highly toxic gases are not released to the working environment during cylinder change outs.

Many applications require that gas always be supplied to the process and the flow can not be shut down to replace empty cylinders or must feed gas for long periods when the system is unattended, i.e. helium to a gas chromatography laboratory. In these instances a changeover manifold is the solution. Changeover manifold control sections available in this catalog (see pages 38-43, can be used with any of the multiple station manifolds or with a single pigtail on each side.

BRASS MANIFOLDS

FEATURES:

- Diaphragm packless station valves for high purity.
- 3000 psig service pressure.
- Cleaned for high purity service.
- Standard CGA 346 header pigtail connections when valves are installed, non-valve headers are provided with mating connections on the pigtails.

DESCRIPTION

These manifolds are constructed of 1/2" brass pipe silver-brazed at each joint. Station valves are the diaphragm packless type for high purity service and are installed with Teflon tape so that they may be easily replaced in the field if necessary. All header pigtail connections are CGA 346 to help ensure that pigtails are installed properly. A plug is inserted in the last tee to allow for the addition of future cylinder stations if required. Suitable brackets for mounting the manifold to a wall are provided.

SPECIFICATIONS

Header and Valves: brass
 Pigtails: 24" flexible type 316 stainless steel inner core with brass CGA connections.
 Check valves: brass
 Pressure rating: 3000 psig
 Header outlet: mating connection to pigtail cylinder CGA
 Stations: 10" on center

HOW TO ORDER

Model	Description
910-1-X-CGA*-FPB604-2	single row manifold without station valves, but with check valves in the pigtails
910-2-X-CGA*-FPB604-2	single row manifold with station valves, but no check valves in pigtails
910-3-X-CGA*-FPB604-2	single row manifold with station valves and check valves in the pigtails.
920-1-X-CGA*-FPB604-2	double row manifold without station valves, but with check valves in the pigtails
920-2-X-CGA*-FPB604-2	double row manifold with station valves, but no check valves in pigtails
920-3-X-CGA*-FPB604-2	double row manifold with station valves and check valves in the pigtails.

*Complete the model number by inserting the number of cylinders to be connected to the manifold in place of the X and specifying the CGA connection.

OPTIONS

Flexible pigtails - 36" long - change suffix "2" to "3"
 Outlet connection - 1/2" NPT female - add suffix "P8F"
 Master shut off valve - add "MV" to P/N

STAINLESS STEEL MANIFOLDS

FEATURES:

- Diaphragm packless station valves for high purity.
- 3000 psig service pressure(4500 and 6000 psig available).
- Cleaned for high purity service.
- Standard CGA 346 header pigtail connections when valves are installed, non-valve headers are provided with mating connections on the pigtails.

DESCRIPTION

These manifolds are constructed of 1/2" 316 stainless steel pipe and fittings heliarc welded at each joint. Station valves are the diaphragm packless type for high purity service and are installed with Teflon tape so that they may be easily replaced in the field if necessary. All header pigtail connections are CGA 346 to help ensure that pigtails are installed properly. A plug is inserted in the last tee to allow for the addition of future cylinder stations if required. Suitable brackets for mounting the manifold to a wall are provided.

SPECIFICATIONS

Header and Valves: 316 stainless steel
 Pigtails: 24" flexible type 316 stainless steel inner core w/ stainless steel CGA connections.
 Check valves: 316 stainless steel
 Pressure rating: 3000 psig
 Header outlet: mating connection to pigtail cylinder CGA
 Stations: 12" on center

HOW TO ORDER

Model	Description
911W-1-X-CGA*-FP604-2	single row manifold without station valves, but with check valves in the pigtails
911W-2-X-CGA*-FP604-2	single row manifold with station valves, but no check valves in pigtails
911W-3-X-CGA*-FP604-2	single row manifold with station valves and check valves in the pigtails.
921W-1-X-CGA*-FP604-2	double row manifold without station valves, but with check valves in the pigtails
921W-2-X-CGA*-FP604-2	double row manifold with station valves, but no check valves in pigtails
921W-3-X-CGA*-FP604-2	double row manifold with station valves and check valves in the pigtails.

* Complete the model number by inserting the number of cylinders to be connected to the manifold in place of the X and specifying the CGA connection.

OPTIONS

Flexible pigtails - 36" long - change suffix "2" to "3."
 Outlet connection - 1/2" NPT female - add suffix "P8F."

Manifolds for 4500 or 6000 psig service are also available.

FLOWMETER TUTORIAL

Flowmeters are used to measure the rate of flow of liquids or gases. They do not control the rate of flow unless they are equipped with a control valve or flow controller. There are two basic types of flowmeters; rotameters and electronic mass flowmeters. Mass flowmeters and mass flow controllers can be found on pages 89-93.

ROTAMETERS

Rotameters are a simple, precise and economical way to measure flow rates. They consist of a precision tapered glass tube containing one or more spherical floats. A measuring scale is etched on the glass tube. The diameter of the tube at the bottom, or inlet is approximately equal to the diameter of the float.

As fluid enters the tube, the float rises to a point where the area between the float and the tube wall is large enough to permit unrestricted flow, and the float is stationary. This position corresponds to a point on the tube scale and thus permits a reading of the rate of flow.

The capacity, or flow range of a tube can be varied by changing the float material. Materials of a lower density such as pyrex glass or sapphire give a lower flow capacity than materials of a higher density like tantalum or stainless steel (see Figure 1).

Rotameters, unlike mass flowmeters, are affected by temperature and pressure variation (see Figure 2). When equipped with a control valve on the inlet, readings are correct as long as the outlet pressure is equal to the pressure at which the tube was calibrated. When a valve is installed on the outlet, the tube calibration pressure must match the inlet pressure to the flowmeter unit.

Figure 1
Relative positions of floats of various densities for the same rate of flow with 1 atmosphere outlet pressure.

Figure 2
Effect of float position for the same rate of flow in Figure 1, but with increased pressure at the flowmeter outlet.

FLOWMETER - Series 7920

DESCRIPTION

The 7920 flowmeters provide the most accurate indication and precise control of fluids available for a wide range of applications. This versatile meter is functionally and dimensionally interchangeable with other current designs while incorporating many innovative features.

All 7920 glass metering tubes have integral float guides to assure the accuracy of $\pm 5\%$ of full scale. Glass and stainless steel floats are standard. The meters are available in a wide range of flows.

Front window incorporates a 1.5 X scale magnification factor for more accurate tube reading. End seals in the design are direct-acting and nonrotating for fast alignment and convenient service access.

APPLICATIONS

- Carrier and fuel gas chromatography
- Atomic absorption
- Semiconductor manufacture
- Chemical processing
- General research and industrial uses

DESIGN FEATURES

- High resolution 150mm scale length.
- Many standard direct reading scales available.
- Precision taper, fluted metering tube.
- Lowest available pressure drop via maximum flow path area increases available flow rates at low feed pressures.
- Standard front panel mounting requires minimum hardware - easy installation, quick access.
- Available utility and high precision metering valves do not require special fittings.
- Simplified; direct acting non-rotating compression seal.
- 1/4" NPT female connections are standard.

MATERIALS OF CONSTRUCTION

End Blocks: Chrome plated Brass or 316 Stainless
 "O" Rings & packing: Viton® - standard
 Buna-N, EPR rubber and teflon
 are available options
 Side Plates: Anodized Aluminum

SPECIFICATIONS

Maximum Pressure: 200 psig
 Temperature Range: -20°F to +250°F
 -30°C to +120°C
 Accuracy: $\pm 5\%$ of full scale
 Repeatability: $\pm 0.25\%$ of scale reading

Series 7920 CONTINUED

Model	Material	Valve Type
B7920*	Brass	None
B7920V*	Brass	Standard

	St. Steel	4190- 42860
7920-10	St. Steel	1.0- 100

Selected Correction Factors *flow = air flow x correction factor*

Gas	Correction Factors
air	1.00
acetylene	1.054
ammonia	1.304
argon	0.851
n-butane	0.706
carbon dioxide	0.811
carbon monoxide	1.017
ethane	0.981
ethylene	1.016
helium	2.689
hydrogen	3.810
methane	1.343
nitrogen	1.017
nitrous oxide	0.811
oxygen	0.951
propane	0.810

*Actual flow rates will vary from one manufacturing lot to another. Calibration data is supplied for each tube shipped. All calibrations are for air @ 0 psig outlet and 70°F.

GAS PROPORTIONER

Series 7950

The gas proportioner meters the flow of each of two gases and mixes them thoroughly in a special mixing tube to produce homogeneous two-component mixtures. Concentration accuracies of 10% of component value are maintained with a standard unit using typical calibration curves. (In a desired mixture of 1% of gas A and 99% of gas B, a concentration between .9% and 1.1% is maintained.) Individual units can be calibrated for non-corrosive gases to attain an accuracy of 5% of the component value. Individual calibration curves are supplied with these specially calibrated units.

The control valves are installed at the outlets making these gas proportioners back pressure compensated. The readings on the tubes are accurate regardless of the downstream pressure, so long as the inlet pressures are maintained at the levels for which the tubes were calibrated.

The unit is recommended for 50 psig pressure but can be used at any pressure between 10 and 200 psi.*

These proportioners are available in both aluminum and stainless steel construction. When ordering a gas proportioner, specify the composition of the desired mixture, the gases, the discharge rate, and inlet pressure in addition to the model number.

* For best performance, it is recommended that tubes have only one float.

HOW TO ORDER

All models include baseplate, mixing tube and two flowmeter tubes of your choice selected from page 83.*

* If unsure of correct tubes, provide the composition range of intended mixtures, total outlet flow and operating inlet pressure. We will select the tubes.

Model	Material	Valve	Connections
7951	Aluminum	Standard	1/8" NPT female

MULTI-TUBE UNITS AND MIXERS

Series 7940 and 7941

The Series 7940 multitube flowmeters are available in either Aluminum or 316 Stainless Steel and in two basic configurations.

- 7940 Series has four flowmeter tubes with individual outlets to permit the metering of four separate gas streams. It comes complete with four tubes.
- 7941 Series mixers have three flowmeter tubes and a mixing tube with a single outlet to produce homogenous mixture of three gases to an accuracy of $\pm 10\%$. The tubes have a single glass float and calibration curves for most common gases are available at no extra cost.
- All units are back pressure compensated by mounting the control valves on the outlet.
- All are available with a standard valve cartridge or a high accuracy valve to permit very accurate setting of low flow rates.
- All units are provided with a bench stand.

SPECIFICATIONS

Connections: 1/8" NPTF or 1/4" tube fitting

Maximum Inlet Pressure: 200 psig

Operating Temperature: 20°F to 250°F

FLOWMETER Series 7965

The Series 7965 flowmeters use 65mm flow tubes with a single float. They are calibrated to read directly in SCCM, SLPM or SCFH of air. Correction factors are available for a number of common gases. The Series 7965 flowmeters are available in chrome plated brass or stainless steel.

SPECIFICATIONS

Maximum Inlet Pressure: 200 psig
 Temperature Range: -20° to +250°F
 Valve: Standard or high accuracy needle valve
 Dimensions: 1 1/4"W x 5 1/2"H x 2 3/4"D
 Accuracy: ±5% full scale
 Repeatability: ±0.25% of scale reading
 Inlet and Outlet: 1/4" NPT female standard

ECONOMIC MACHINED ACRYLIC FLOWMETER

Series 7923

The Series 7923 acrylic flowmeters are an ideal low cost tool for measuring flow rates of inert and non-reactive gases. The 1/8" female standard inlet and outlet connections are contained in brass inserts to ensure a leak-free connection to prevent cracking of the acrylic body. A needle valve to control the flow rate is included. Flowmeters have a dual scale for air in SLPM and SCFH.

SPECIFICATIONS

Maximum inlet pressure: 100 psig

Maximum operating temperature: 150°F

Accuracy: ±5% full scale

Inlet and Outlet: 1/8" NPT female standard on 3" centers

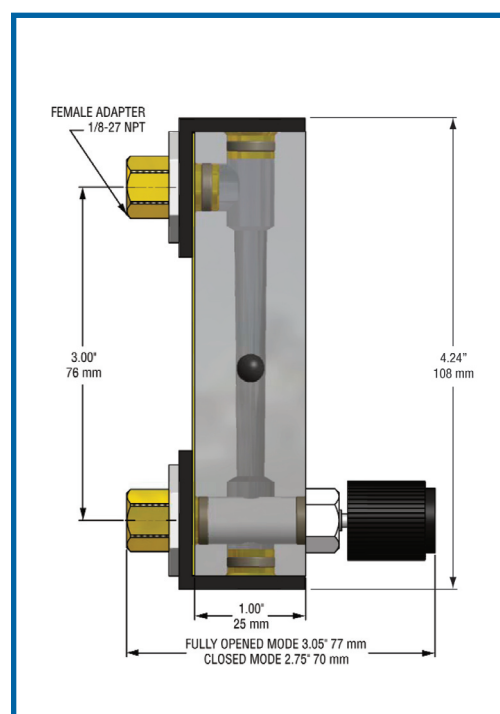

Seals: buna-N

*All calibrations are for air @ 0 psig outlet and 70°F.

Options:

- 1/4" hose barbs inlet and outlet - add suffix "4HB."
- 1/4" compression tube fittings inlet and outlet - add suffix "T4FF."
- 1/8" compression fitting inlet and outlet - add suffix "T2FF."

LARGE FLOW ACRYLIC FLOWMETERS

Series 7974 & 7975

The Series 7974 and 7975 acrylic flowmeters are useful in a wide varied of applications involving non-corrosive gases where flow rates exceed those of traditional laboratory models. All units have direct reading scales in either liters/minute or cubic feet/minute of air. Correction factors for other gases can be provided.

FEATURES

- Easy to read scales.
- Air ranges from 14 lpm to 3400 lpm (0.5 to 100 scfm).
- Durable one-piece clear acrylic construction.
- Optional built-in cartridge type valve available.

MATERIALS OF CONSTRUCTION

Body: clear acrylic

Fittings: 7974 series - brass
7975 series - PVC

Valve: brass

Seals: Buna-N

SPECIFICATIONS

Max. Operating Pressure: 100 psig

Operating Temp. Range: 0° to +150° F

Body Inlet and Outlet: 7974 - 1/4" NPT female
7975 - 1" NPT female

Accuracy: 7974 Series - ±3% of full scale
7975 Series - ±2% of full scale

Series 7974

Series 7975

MASS FLOW TUTORIAL

INTRODUCTION

Like variable area flowmeters, electronic mass flow equipment measures and controls the flow of gases. Unlike variable area flowmeters mass flow equipment measurement is not compromised by the variation of pressure or temperature within stated limits of each unit. The technology of mass flow measurement offers a host of solutions to gas control and the possibility of preparing gas mixtures on site in the laboratory or in the manufacturing process. Accuracy is generally + 1% FS compared to + 5% fS for a variable area meter.

MASS FLOW PRINCIPLE OF OPERATION

Metered gases are divided into two laminar flow paths, one through the primary flow conduit, and the other through a capillary sensor tube. Both flow conduits are designed to ensure laminar flows and therefore the ratio of their flow rates is constant.

Two precision temperature sensing windings on the sensor tube are heated, and when flow takes place, gas carries heat from the upstream to the downstream windings. The resultant temperature differential is proportional to the change in resistance of the sensor windings.

A Wheatstone bridge design is used to monitor the temperature dependent resistance gradient on the sensor windings which is linearly proportional to the instantaneous rate of flow.

Output signals of 0 to 5Vdc and 4 to 20mA are generated indicating mass molecular based flow rates of the metered gas.

Flow rates are unaffected by temperature and pressure variations within stated limitations.

MASS FLOWMETERS

A mass flowmeter consists of a transducer and a readout like the unit picture here. Mass flow units are factory calibrated with an NIST traceable certified systems, have a high level of leak integrity (normally 10⁻⁹sccs helium) and can be fitted with a totalizer that provides the current flow rate and the total volume of gas passed over time.

MASS FLOW CONTROLLERS

A mass flow controller is a mass flow transducer combined with an electronic control valve. A typical mass flow controller is pictured here. With the control valve the user is able to set and maintain a specified flow rate regardless of pressure and temperature variations within the designated limitations of the device. The mass flow controller has all the features of a mass flowmeter with regard to calibration, leak integrity, and totalizing.

ELECTRONIC MASS FLOWMETERS

Series A820

DESCRIPTION

The Series A820 electronic mass flowmeters are compact, self-contained units designed to indicate the flow rate of gases. Unlike variable area meters, flow rates are unaffected by variations in temperature and pressure within specified limits. The mechanical layout of the design includes an LCD readout built into the top of the transducer. This readout module is tiltable over 90 degrees to provide optimum reading comfort. The readout is connected by a standard modular plug, and is readily removable and extended for remote reading installations. Units are available in aluminum or stainless steel.

FEATURES

- Rigid metal construction.
- Maximum operating pressure – 1000 psig.
- NIST traceable calibration certification.
- Leak integrity 1×10^{-9} sccm helium.
- 0-5 VDC or 4-20mA signals.
- Built-in tiltable readout display in engineering units.
- Circuit protection.
- Totalizer option available.

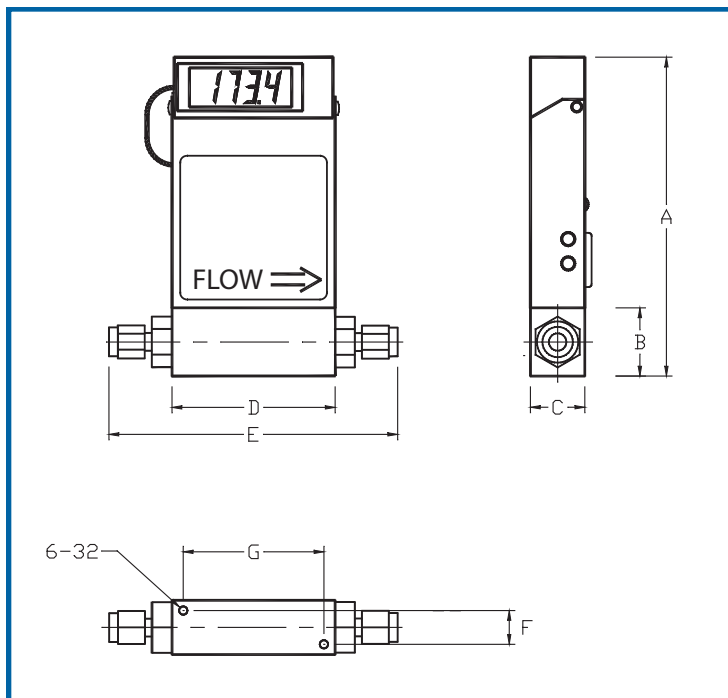

SPECIFICATIONS

Accuracy:	$\pm 1\%$ of full scale, including linearity for gas temperatures of 59°F to 77°F and pressures of 5 to 60 psia
Repeatability:	$\pm 0.5\%$ of full scale
Response time:	Generally 2 seconds to within $\pm 2\%$ of actual flow
Temperature coefficient:	0.15% of full scale/°C
Pressure coefficient:	0.01% of full scale/psi
Maximum pressure drop:	0.04 to 3.23 psid depending on flow range
Gas and ambient Temp:	32° to 122°F
Output signals:	Linear 0-5 VDC (1000 ohms min load impedance) or 4-20 mA (0-250 ohms loop resistance)
Transducer input power:	12 VDC; 200 mA of maximum
Time constant:	800 ms
Materials in fluid contact:	Aluminum units: anodized aluminum, 316 SS, brass, Viton o-rings Stainless steel units: 316 SS and Viton o-rings
Attitude sensitivity:	No greater than + 15 degrees from horizontal to vertical: Standard calibration is in horizontal position.
Connections:	1/4" compression fittings
Leak integrity:	1×10^{-9} sccm of helium maximum to the outside environment
CE compliant:	EN 55011 class, class B: EN50082-1

ELECTRONIC MASS FLOW CONTROLLERS

Series A810

DESCRIPTION

The Series A810 electronic mass flow controllers are compact, self-contained units designed to indicate and control a set flow rate of gas. They are unaffected by temperature and pressure variations within specified limits. The mechanical layout of the design includes an LCD readout built into the top of the transducer. This readout module is tiltable over 90 degrees to provide optimum reading comfort. The readout is connected by a standard modular plug, and is readily removable and extended for remote reading installations. Units are available in aluminum or stainless steel.

FEATURES

- Rigid metal construction.
- Maximum operating pressure – 1000 psig.
- NIST traceable calibration certification.
- Built-in set point control.
- Leak integrity 1×10^{-9} sccm helium.
- 0-5 VDC or 4-20mA signals.
- Built-in tiltable readout display in some models.
- Circuit protection.
- Totalizer option available.
- 50 Δ P max.

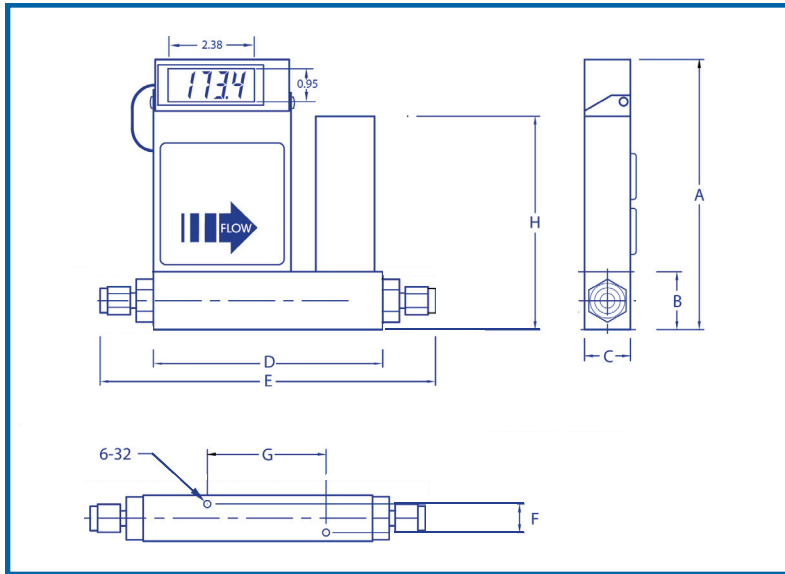

SPECIFICATIONS

Accuracy:	$\pm 1.5\%$ of full scale, including linearity for gas temperatures of 59°F to 77°F and pressures of 5 to 60 psia
Repeatability:	$\pm 0.5\%$ of full scale
Response time:	Generally 2 seconds to within $\pm 2\%$ of actual flow
Temperature coefficient:	0.15% of full scale/°C
Pressure coefficient:	0.01% of full scale/psi
Maximum pressure drop:	1.06 to 8.0 psid depending on flow range
Maximum pressure differential:	50 psi
Gas and ambient Temp:	41° to 122°F
Output signals:	Linear 0-5 VDC (1000 ohms min load impedance) or 4-20 mA (0-250 ohms loop resistance)
Transducer input power:	11-26V; 800 mA

GAS PURIFIERS-Model 8010 (for pressure applications up to 3000 psig)

DESCRIPTION

The model 8010 replaceable cartridge gas purifier is useful in many laboratory and industrial applications where the introduction of oil and/or water can result in poor performance or equipment shut-down. It is not uncommon to find varying levels of these impurities in some industrial gases and occasionally even in specialty carrier gases. The small daily operating costs are easily justified by the prevention of a system shut-down and the subsequent cleaning and/or repair costs.

The units are especially useful in GC carrier gas lines to ensure that undesirable moisture does not enter the instrument. Water can contribute to inaccurate results and the rapid deterioration of expensive chromatography column separation phases.

The model 8010 purifier shell must be used in conjunction with specially designed replaceable cartridges.

Models 8010-1, 8010-2, or 8010-3 are filled with various adsorbents. Model 8010-4 contains a 5 micron sintered bronze filter element. These are described below. These cartridges are shipped in hermetically sealed cans in a dry nitrogen atmosphere with convenient screw caps for easy opening. This improved packaging ensures full retention of capacity in storage until the time of use.

MATERIALS OF CONSTRUCTION

Shell body: anodized aluminum

Shell head: nickel plated brass

O-ring seal: buna-N

- Cartridges:* 8010-1 Molecular Sieve 13x
 8010-2 Molecular Sieve 4A
 8010-3 Activated Charcoal
 8010-4 Sintered Bronze
 8010-5 Molecular Sieve 3A
 8010-6 Molecular Sieve 5A

Other materials available on request.

*O-ring seal is buna-N

SPECIFICATIONS

Max. Operating Pressure: 3000 psig (500 psig for oxygen)

Operating Temperature: -40° to +165°F.

Inlet and Outlet Ports: 1/4" NPT female

Dimensions: 2" dia. x 5 3/4" long

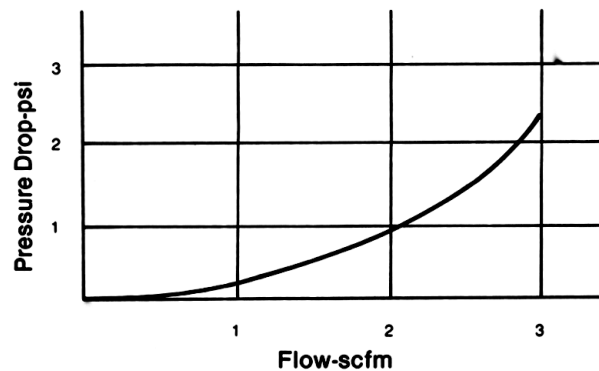

Weight with Cartridge: 1.5 lbs.

Dew Point Achievable: -100°F.

HOW TO ORDER

Model	Description	Absorption Capacity	General Application
8010	Purifier Shell Only		
8010-1	Molecular Sieve 13x	6.5 grams water	Removal of oil & water
8010-2	Molecular Sieve 4A	7.2 grams water	Removal of water from inert gases and saturated hydrocarbons
8010-3	Activated Charcoal (Warning: Do not use with oxygen concentrations in excess of 21%)		Removal of heavy hydrocarbons acetone level control in acetylene used for atomic absorption
8010-4	5 micron sintered bronze element (other micron sizes available)		Particulate removal
8010-5	Molecular Sieve 3A		Removal of water from unsaturated hydrocarbons such as acetylene
8010-6	Molecular Sieve 5A		

PRESSURE DROP VS FLOW

GAS PURIFIERS-Model 8000A (high capacity units)

DESCRIPTION

The model 8000A replaceable cartridge gas purifier is similar to the Model 8010 but is designed for higher capacities and a lower working pressure. The Model 8000A is constructed of a machined aluminum shell that accepts a large capacity cartridge. This shell may be permanently mounted when installed in the gas line and can be serviced without disturbing the line connections. Spring pressure holds the replaceable cartridge tightly against the bottom gasket to prevent the gas to be purified from bypassing the cartridge. The side inlet is located at the bottom of the unit oriented 90° from the outlet located at the top of the unit.

The model 8000A purifier shell must be used in conjunction with specially designed replaceable cartridges (Model 8000-1, 8000-2, or 8000-3) filled with various adsorbents. These are described below. These cartridges are shipped in hermetically sealed cans with convenient pull-tab ends for easy opening. This improved packaging ensures full retention of capacity in storage until the time of use.

MATERIALS OF CONSTRUCTION

Shell body: anodized aluminum

Gaskets: buna-N

Cartridges: 8000-1 Molecular Sieve 13x
 8000-2 Molecular Sieve 4A
 8000-3 Activated Charcoal
 8010-5 Molecular Sieve 3A
 8010-6 Molecular Sieve 5A

SPECIFICATIONS

Max. Operating Pressure: 1500 psig

Operating Temperature: -40° to +200°F.

Inlet and Outlet Ports: 1/4" NPT female

Dimensions: 4 1/2" dia. x 15 9/16" long

Weight with Cartridge: 12.4 lbs.

Dew Point Achievable: -100°F.

HOW TO ORDER

Model	Description	Absorption Capacity	General Application
8000A	Purifier Shell Only		
8000-1	Molecular Sieve 13x	126 grams water	Removal of oil and water from inert gases and saturated hydrocarbons
8000-2	Molecular Sieve 4A	134 grams water	Removal of water
8000-3	Activated Charcoal (Warning: Do not use with oxygen concentrations in excess of 21%)		Removal of heavy hydrocarbons acetone level control in acetylene used for atomic absorption
8000-5	Molecular Sieve 3A		Removal of water from unsaturated hydrocarbons such as acetylene
8000-6	Molecular Sieve 5A		

OXYGEN TRAPS

Series 6300

DESCRIPTION

These Series 6300 oxygen traps contain a highly active, metal-containing, inert supported reagent filled into a one-piece aluminum container. The trap is capable of reducing the oxygen content of a gas stream down to 99.99998% of its original concentration. Each unit is filled under a heated flow of ultra high purity helium to eliminate the need for extensive purging prior to GC or GC/MS operation.

The Series 6300 units are ideal for use with hydrogen and inert carrier gases commonly used with TC and FID gas chromatographs as well as argon-methane mixtures used with electron capture gas chromatographs. The all metal housing virtually eliminates contamination and resultant signal noise that often occur with traps constructed of other materials. These units can also be used to treat carbon monoxide, carbon dioxide, alkanes, alkenes, aliphatic hydrocarbon gases and low boiling point aromatics, like benzene and toluene.

FEATURES

- Reduces oxygen levels to less than 15ppb.
- Scrubbing agent sphere size optimized to achieve maximum surface area and capacity to provide twice the surface area and capacity of "look-alike" units.
- Filter design and aspect ratio prevents channeling and promotes even flow and efficient scrubbing.
- Inlet and outlet fitted with 40 micron stainless steel frits.
- All metal construction.
- Bed material treated with ultra high purity helium.
- Operating pressure: 250 psig
- Oxygen removal capacity:

6300	525 mg
6350	4200 mg
- Dimensions:

6300	1.25" O.D. x 11.25" long
6350	2 3/8" O.D. x 17" long

HOW TO ORDER

Model	Connections
6300-2*	1/8" tubing compression
6300-4*	1/4" tubing compression
6350-8*	1/2" tubing compression
8012C	mounting clip
8050C	mounting clip for 6350

*Available with stainless steel compression fittings - add "SS" to part number.

Gas traps should be mounted in a vertical position to ensure proper contact of the gas with the adsorbent. Use model 8012C mounting clip with 6300 Series oxygen trap.

8012C Mounting Clip

INDICATING MOISTURE TRAPS

Series 8012, 8020, and 8040, 8050

DESCRIPTION

These units are designed to remove water, oil and organics from gases commonly used as gas chromatography carrier gases. They are constructed from Lexan® polycarbonate tubing with aluminum end caps sealed with Viton® o-rings, except for the 8050 which has a solid aluminum housing and is thus non-indicating. All units are filled with a mixture of molecular sieve 13X and indicating molecular sieve 4A. These are the highest capacity molecular sieves available and the preferred choice for gas drying. The blue indicating sieves turn buff color at 20% relative humidity.

FEATURES

- Reduces water to less than 20 ppb.
- Available in 3 sizes (120cc, 200cc, 400cc, 1600cc) that can easily be refilled.
- Inlet and outlet o-ring sealed connectors are equipped with 40 micron sintered stainless steel frits to prevent particulates from entering your system.
- Mixed spherically shaped 13X and 4A adsorbents provides superior bed packing with less resistance to flow.
- Mounting clip available for convenient installation.
- Moisture removal capacity:

8012	21.6 grams
8020	36.0 grams
8040	72.0 grams
8050	132 grams
- Dimensions:

8012-2 or -4	1.5" O.D. x 9.0" long
8020-2 or -4	1.5" O.D. x 12.5" long
8040-2 or -4	1.75" O.D. x 17.5" long
8050-8	2 3/8" O.D. x 17" long
- Working Pressure:

8012, 8020, 8040	125 psig
8050	250 psig

HOW TO ORDER

Model	Capacity	Connections
8012-2*	120 cc	1/8" tubing compression fittings
8012-4*	120 cc	1/4" tubing compression fittings
8020-2*	200 cc	1/8" tubing compression fittings
8020-4*	200 cc	1/4" tubing compression fittings
8040-2*	400 cc	1/8" tubing compression fittings
8040-4*	400 cc	1/4" tubing compression fittings
8040R	400 cc	Provides enough for three 120 cc, two 200 cc, or one 400 cc refill
8050-8*+	735 cc	1/2" tubing compression fitting
8050R	1500 cc	provides enough for two refill
8012C		for mounting 8012 and 8020 units
8040C		for mounting 8040 units only
8050C		for mounting 8050 units only

+8050 is a non-indicating trap

*Available with stainless steel compression fittings - add "SS" to part number.

8012C
Mounting Clip

Gas traps should be mounted in a vertical position to ensure proper contact of the gas with the adsorbent. Use model 8012C, 8040C or 8050C mounting clip with 8012, 8020 and 8040 Series moisture traps.

CO2 TRAP

Series 6400

DESCRIPTION

The 6400 Series carbon dioxide trap is designed to remove CO₂ gas from air, argon, helium, hydrogen, or nitrogen. The trap body is constructed of borosilicate glass with nickel plated end fittings with stainless steel sintered frits.* The absorption media is a formulation of sodium hydroxide and calcium hydroxide with an high absorptive capacity and indicating properties. Typically, this material will absorb 15-20% of its weight in carbon dioxide before the material is saturated and needs to be replaced. Replacement is indicated when the normally white color of the material turns violet. If moisture is detrimental to your system, a moisture trap should be installed down stream from this unit to adsorb water evolved from the absorption of the carbon dioxide (see page 69.)

*Units with stainless steel fittings are also available. Add "SS" to part number.

FEATURES

- Removes carbon dioxide to less than 0.5 ppm.
- Inlet and outlet fitted with 40 micron stainless steel frits.
- Reaction with carbon dioxide indicated by color change from white to violet.
- Inlet and outlet connections are 1/4" or 1/8" stainless steel compression fittings.
- Operating pressure: 125 psig max.
- CO₂ removing capacity:

6410	45 grams CO ₂
6425	90 grams CO ₂
- Dimensions:

6410	1.5" O.D. x 12.5" long
6425	1.75" O.D. x 16.5" long

HOW TO ORDER

Model	Description	End Fittings
6410-2	carbon dioxide trap - 100 cc	1/8" compression
6410-4	carbon dioxide trap - 100 cc	1/4" compression
8012C	mounting clip for 6410 trap	
6425-2	carbon dioxide trap - 250 cc	1/8" compression
6425-4	carbon dioxide trap - 250 cc	1/4" compression
8040C	mounting clip for 6425 trap	

8012C
Mounting Clip

8040C
Mounting Clip

Gas traps should be mounted in a vertical position to ensure proper contact of the gas with the adsorbent. Use model 6400C or 8040C mounting clip with 6400 Series carbon dioxide trap.

HYDROCARBON TRAPS

Series 8200

DESCRIPTION

These units are designed to remove organics, such as alcohols, aromatics, chlorinated hydrocarbons, esters, ethers, hydrocarbons, and ketones from air, hydrogen, and inert carrier gases used in gas chromatography. They are constructed of aluminum and filled with extremely high surface area coconut shell based activated carbon.

The 8200 is a refillable purifier. Since impregnated carbons do not readily desorb all compounds, we recommend that the units be changed or refilled on a regular schedule using our 8200R refill kit that provides enough material for two charges of an 8200 or the 8250R which provides one charge of an 8250.

FEATURES

- Removes organics from air, hydrogen, and inert carrier gases. Does not remove light hydrocarbons like methane.
- Highly active coconut shell based carbon efficiently removes many types of hydrocarbon compounds.
- All metal housing.
- Refillable 200 cc or 1600 cc capacity.
- 40 micron filters on the inlet and outlet.
- Mounting clip available for convenient installation.
- Working pressure: 250 psig.
- Dimensions:

8200	1.5" O.D. x 12.5" overall length
8250	2 3/8" O.D. x 17" overall length

HOW TO ORDER

Model	Connections
8200-2*	1/8" tubing compression fittings
8200-4*	1/4" tubing compression fittings
8250-8*	1/2" tubing compression fittings
8250R	Refill kit - contains 3 charge
8200R	Refill kit - contains 2 charges
8012C	Mounting clip
8050C	Mounting clip for 8250

*Available with stainless steel compression fittings - add "SS" to part number.

Gas traps should be mounted in a vertical position to ensure proper contact of the gas with the adsorbent. Use model 8012C mounting clip with 8200 Series hydrocarbon trap.

8012C
Mounting Clip

OXYGEN REMOVING PURIFIER FOR HYDROGEN

Series 6210

DESCRIPTION

The Series 6210 Purifiers remove oxygen from hydrogen by catalytic action. They are capable of removing up to 1% oxygen from a hydrogen stream down to a level of less than 1ppm. This reaction is normally accomplished at room temperature. At higher oxygen impurity concentrations, somewhat elevated temperatures may be experienced depending on operating conditions.

The purification is carried out by the formation of water from the oxygen impurity and the hydrogen background. If water presents a problem in your system it is suggested that a Model 8010 or 8000 purifier be installed in the system after the Series 6210 unit (see pages 94 and 95.)

The catalytic materials do not require regeneration and will function indefinitely providing that they are not contaminated. Sulfur and halogens are the primary contaminants of concern.

HOW TO ORDER

Model	Max. Flow SCFH	Max. Oper. Press. psig	Connections female	Dimensions inches
6210-10	10	2000	1/4" compression	1.05" dia. x 9.5" long
6210-25	25	2200	1/4" compression	1.32" dia. x 14.5" long
6210-50	50	1200	1/4" compression	1.66" dia. x 15" long

6210-500	500	900	1/2" compression	4.0" dia. x 23" long

MOLECULAR SIEVES

DESCRIPTION

Molecular sieves have a wide variety of uses in gas and chemical purification processes. We offer Types 3A, 4A, 5A, and 13X beads in a variety mesh sizes in the standard container sizes shown below. Custom packaging is also available.

Beads offer some distinct advantages over pellets that are offered by competitors.

- Beads provide a greater surface area per cubic foot resulting in more efficient adsorption for equivalent sized beds.
- Beads are stronger than pellets, thus they maintain their size and shape for more efficient adsorption.
- Beads do not create dust to the degree that pellets do; this results in a cleaner system with less frequent clogging of system filters.
- Beads offer an equivalent pressure drop to pellets.

Molecular Sieve 3A Formula $K_{12}[(AlO_2)_{12}] \cdot X H_2O$

The potassium form of the Type A Crystal structure, is an alkalai metal alumino-silicate. Type 3A is used for drying polar liquids such as ethanol and methanol and the dehydration of unsaturated hydrocarbons such as acetylene, butadiene, and propylene.

Molecular Sieve 4A Formula $Na_{12}[(AlO_2)_{12}] \cdot X H_2O$

The sodium form of the Type A Crystal structure, is an alkalai metal alumino-silicate. Type 4A is used for drying inert gases and saturated hydrocarbons, such as methane, ethane, and propane.

Molecular Sieve 5A Formula $Ca_4,5Na_3[(AlO_2)_{12}] \cdot X H_2O$

The calcium form of the Type A Crystal structure, is an alkalai metal alumino-silicate. Type 5A is used for separating normal paraffins from branched-chain and cyclic hydrocarbons through a selective adsorption process.

Molecular Sieve 13X Formula $Na_{86}[(AlO_2)_{86}(SiO_2)_{106}] \cdot X H_2O$

The sodium form of the Type X Crystal structure, is an alkalai metal alumino-silicate. Type 13X is used for general drying of inert gases and saturated hydrocarbons, purification of air through removal of water and carbon dioxide, and the removal of H₂S and mercaptans from natural gas.

FILTER APPLICATIONS

GAS CHROMATOGRAPHY

Particulates in an instrument carrier gas stream can reduce the overall performance of laboratory analytical work. Removing particles can reduce background noise levels and enhance instrument accuracy and precision.

PHARMACEUTICAL MANUFACTURING

The capability of these filters to remove bacteria and other particulate matter enables pharmaceutical manufacturers to install a filter in gas lines to those systems requiring process, purge, or blanket gases, thus ensuring a virtually sterile gas atmosphere.

PNEUMATIC OPERATED DEVICES

Because of the small orifices normally associated with these devices, they often malfunction and require frequent servicing. Installation of a particulate filter in the air or nitrogen feed lines helps to ensure longer trouble free operation, thus reducing down-time.

SEMICONDUCTOR MANUFACTURING

With increasing levels of device density the effect of particulate contamination becomes more damaging to potential yields. Semiconductor manufacturers install these filters in virtually all their gas lines to reduce the effects of particulates and improve their production yields.

TEFLON® MEMBRANE GAS LINE FILTER 0.003 MICRONS Series 5010

The Teflon® medium in this filter efficiently traps particles down to 0.003 microns. These units may be installed in gas lines supplied by cylinders or bulk sources. Both the materials and manner of construction render the Series 5010 units compatible with a wide variety of gases.

FEATURES

- 99.9999999% efficient at 0.003 micron level.
- Filter medium - porous PTFE Teflon® membrane.
- All welded 316L stainless steel construction.
- Internal finish - less than 10 R_a.
- 0.5 sq. ft. filter area provides high particle retention capacity.
- Excellent compatibility with a wide variety of gases.
- Helium leak tested to 1 x 10⁻⁹ cc/sec.

SPECIFICATIONS

Filtration: 99.9999999% @ 0.003 microns
 Max. Operating Pressure: 250 psig @ 250°F.
 Max. Operating Temperature: 250°F.
 Max. Flow: 200 slpm @ 5 psi ΔP with 30 psig inlet

DEPTH GAS FILTERS - 0.01 MICRONS

Series 7010

DESCRIPTION

The Series 7010 depth filters are the workhorses of laboratories and many high purity industrial processes. They are routinely used in critical gas lines and as pre-filters to extend the lifetime of more expensive filtration units. They are designed to provide high filtration efficiency at an economical cost.

The Series 7010 filters employ a microporous fiberglass media held in a 316 stainless steel all welded housing. They are available in two sizes that accommodate most flow requirements.

FEATURES

- 99.9999% filtration efficiency at 0.01 micron level.
- All welded 316 stainless steel construction provides compatibility with a variety of gases.
- Long service life - particles are collected in the filter matrix throughout the depth of the filter.
- Helium leak tested to 1×10^{-9} cc/sec.

SPECIFICATIONS

Filtration: 99.9999% @ 0.01 microns

Max. Operating Pressure: 250 psig @ 250°F

Operating Temperature: 0° to 750°F.

HIGH EFFICIENCY COALESCING FILTER

Series 7300

DESCRIPTION

These filters are ideal for removing liquid and solid contaminants, such as water, oil, and particulates, from air and inert gas streams. They are an excellent choice for purifying the air from oil lubricated compressors. Housing are constructed of aluminum with porting from 1/4" NPT female to 3" NPT female. A large range of flow rates are accommodated by this variety of size.

FILTER ELEMENTS

Coalescer Type 70C: These elements have an efficiency rating of 95% against 0.1 micron particles and aerosols. They are a good choice for general purpose applications requiring clean compressed gas for powering valves, cylinders, air tools, etc.

Coalescer Type 50C: These elements have an efficiency rating of 99.99% against 0.1 micron particles and aerosols and should be used for the most demanding applications requiring a high quality clean gas. For the best performance, a Type 70C coalescer should be used as a pre-filter to the 50C.

Adsorption Type CC: Coalescing filters can only remove the oil and water present in gas lines as liquid aerosols. They cannot remove the small fraction of oil present as a true vapor or water vapor. Type CC cartridges are vapor adsorption filters which will remove such gaseous contamination. It is important to remember that Type CC cartridges must always be preceded by a Type 50C coalescing pre-filter.

FEATURES

- Complete removal of oil, water and solids.
- High flow rates with low pressure drop.
- Low cost, completely disposable filter elements.
- Wide selection of sizes.
- Available with manual or fully automatic drains.

STAINLESS STEEL HIGH EFFICIENCY COALESCING FILTER Series 7130 and 7140

DESCRIPTION

These filters are ideal for removing liquid and solid contaminants, such as water, oil, and particulates, from air, inert, and reactive gas streams. They are an excellent choice for purifying gas streams containing corrosive components. These filters fitted with a Type K fluorocarbon resin element are particularly suited for use in gas streams where highly reactive gases are being analyzed, since these elements exhibit very low levels of adsorption. Housing are constructed without welds of 316L stainless steel. They are available with porting of 1/4" NPT female and 1/2" NPT female.

FILTER ELEMENTS

Coalescer Type 70K: These elements have an efficiency rating of 95% against 0.1 micron particles and aerosols. They are a good choice for general purpose applications requiring clean compressed gas.

Coalescer Type 50K: These elements have an efficiency rating of 99.99% against 0.1 micron particles and aerosols and should be used for the most demanding applications requiring a high quality clean gas. For the best performance, a Type 70K element should be used as a pre-filter to the 50K.

Stainless Steel Type 01: These elements are constructed of sintered stainless steel or stainless steel mesh. They are especially useful in highly contaminated gas streams as they may be cleaned and reused. They are available in filtering efficiencies of 1, 10, 25 and 100 microns.

FEATURES

- Complete removal of solid and liquid contaminants from gas streams.
- High flow rates with low pressure drop.
- Selection of non-reactive or stainless steel filter elements.
- Wide selection of sizes.
- Relatively low internal volume.

GAS HEATERS Series 6284

DESCRIPTION

The series 6284 gas heaters when installed between the cylinder and the regulator are designed to reduce the problem of regulator icing that is associated with high flow withdrawal rates of some gases due to their expansion from high pressure to low pressure.

This thermostatically controlled heater will not overheat the gas and can be left unattended without any gas flow. A pilot light indicates when the thermostat is closed and the heating element is operative.

SPECIFICATIONS

Material: Steel case with black oxide finish covering a solid brass body

Max. flow: 90 cubic feet/hour

Voltage: 115 volt single phase 60 hz, 200 watts provided through a 5-foot grounded cord with molded plug.

Heating Range: Thermostat between 160° - 190°F.
Outer case temperature 85°F

Dimensions: 6-5/8" overall length, 2-1/2" diameter.

Weight: 2 pounds

HOW TO ORDER

Model	Application
6284-320	Carbon Dioxide
6284-326	Nitrous Oxide
6284-580	Argon

AUTOMATIC ELECTRIC GAS HEATERS

For Compressed Gases Series 1000

DESCRIPTION

Many liquefied gases cool dramatically under even moderate flow conditions due to the heat of vaporization when the liquid is converted to gas. This effect causes "freezing" in pressure regulators and other equipment resulting in pressure and flow fluctuations. These thermostatically controlled heaters maintain a constant temperature within close limits regardless of load variations, thus assuring a uniform temperature and constant gas flow at all times. All units are completely automatic and can be left on indefinitely, even under no-flow conditions without damage.

APPLICATIONS

- Welding Operations
- Hospitals/Anesthegeology
- Bottling Plants/Wineries
- Foundries
- Food Packaging
- Semiconductor
- Gas Freeze-up Applications

FEATURES:

- Prevents regulator freeze-up.
- Thermostatically controlled.
- Double protection against thermal or electrical overload.
- Continuous high pressure tubing –no internal joints.
- Working pressures up to 4600 psig.
- Completely dry - heat exchange medium is aluminum.
- Heavily insulated - cabinet remains "cool."
- Can be left on, even under no-flow conditions.
- Unlike ambient devices, not affected by adverse atmospheric conditions.
- Flow can be in either direction, without loss of efficiency.
- C.S.A. Approved.
- One year guarantee on material and workmanship.

SPECIFICATIONS

- 11" high x 5.5" wide x 4.25" deep
- 5/16" x .049 continuous copper tubing
- 5/16" x .049 304 stainless tubing optional
- Working pressure: up to 2500 psig (stainless steel: 4600 psig)
- 11 lbs. actual weight; 13 lbs. shipping weight
- 6' 3-wire UL/CSA cord
- 120/240 volts A.C., single phase
- 8.3/4.2 amps (1000 watts)
- Mounting holes 3" on center

CAPACITY (FOR CARBON DIOXIDE, CO₂)**

- Heating : 1000 CFH; 17 CFM; 467 liters/minute; 115 lbs./hr. (Heating valves are based on initial gas temperature of 0°F and outlet temperature of 170°F)
 - Vaporizing: 184CFH; 3 CFM; 84 liters/minute; 22 lbs./hr. (Vaporization valves are based upon initial liquid temperature of 0°F and outlet temperature of 170°F)
- ** Capacities for other gases will vary, depending on their specific heat.

HOW TO ORDER

1. Select basic model

Model	Number Description
1000	1000 watts, 120 volts A.C., copper tubes
SS1000	1000 watts, 120 volts A.C., stainless steel tubes
SS1000A	Same as SS1000, but with adjustable thermostat

2. Select fittings (add to end of basic model #)

Fittings	Suffix Description
-320	CGA 320 female x male (Carbon Dioxide, CO ₂)
-326	CGA 326 female x male (Nitrous Oxide, N ₂ O)
-580	CGA 580 male x female (Nitrogen, N ₂)
-4	1/4" NPT male x male (brass)
-4SS	1/4" NPT male x male (stainless)

Other fittings available on request.

CYLINDER HEATING SYSTEM

HB120 Series

DESCRIPTION

The HB-120 heater is an electrical appliance which supplies supplemental heat to replace the heat of evaporation normally lost when a liquefied gas changes state from liquid to gas inside steel cylinders. Freezing typically occurs with a change of state from liquid to gas is made at a rate faster than the liquid can absorb ambient heat. The use of a heater increases the speed at which the gas may be discharged from the cylinder.

The heater is designed to heat the lower part of the cylinder where freezing usually occurs. For larger flows the use of multiple heaters spaced over the length of the cylinder may be required.

The use of a single HB120 strap is ideal for preventing condensation of low volatility components in gas mixtures to help ensure that the mixture remains homogenous.

An insulating blanket is available to aid in ensuring that the heat is transferred into the cylinder and to aid in holding the heat on the cylinder.

Each heating belt is thermostatically controlled to 130°F to prevent overheating of the cylinder.

The heater has an adjustable Velcro® strap making it easy to apply band to cylinders with diameters of 8" to 10".

SPECIFICATIONS

- 500 watt heating capacity.
- Thermostatically controlled to 130°F .
- Power – 120VAC/60Hz.
- Dimensions – 27" long x 8" wide.
- Weight less than 1 pound.

HOW TO ORDER

Model Number	Description
HB120A	cylinder heater with 4' power cord and 130°F thermostat
HB120-BLK	insulating blanket 48" high x 36" wide

Heater bands sold individually.

GAS CYLINDER WARMING BLANKETS

Series CWB-130

DESCRIPTION

The Series CWB-130 cylinder warming blankets are used to warm cylinders of gas mixtures to maintain a uniform composition. They are particularly useful when the mixture contains low vapor pressure components that may partially condense and change the mixture composition if exposed to lower temperatures, thus making the mixtures analysis unreliable. These blankets are a combination of cylinder heater and insulating blanket. The blanket creates a convection current in the cylinder to maintain a homogenous composition by heating the lower portion of the cylinder more than the upper portion. Models available for both hazardous and non-hazardous areas. Sizes available to accommodate 15", 10", 9", and 8" diameter cylinders. Optional cylinder base insulation pads valve cover are available to further reduce heat loss.

SPECIFICATIONS

- Self-regulating grounded heating element.
- Power rating: 75 watts, 0.45 amps.
- Power: 120 VAC, 5-60 Hz standard, 220 VAC optional.
- 2" thick side and 0.5" top insulation of moisture and oil resistant rigid fiberglass to create insulation jacket.
- Velcro® fasteners for ease of installation.
- CSA approved (optional ATEX approval available).
- Power cord: non-hazardous area – 10 foot SJOW cord
hazardous area – 10 foot Teck 90 cable.
- Hazardous area rating: Class 1, Division 1, Groups B, C, & D.

HOW TO ORDER

Model	Description
For non-hazardous areas	
CWB-130-8	warming blanket for 8" X 48" aluminum cylinders
CWB-130-9	warming blanket for 9" X 51" steel cylinders
CWB-130-15	warming blanket for 15" X 43" steel cylinders
For hazardous areas	
CWB-130H-8	warming blanket for 8" X 48" aluminum cylinders
CWB-130H-9	warming blanket for 9" X 51" steel cylinders
CWB-130H-15	warming blanket for 15" X 43" steel cylinders
Accessories for both types of blankets	
130FP-9	insulating floor pad for 8" and 9" diameter cylinders
130FP-15	insulating floor pad for 15" diameter cylinders

ELECTRONIC CYLINDER SCALES FOR LIQUEFIED AND CRYOGENIC GASES

FEATURES

- Controller has large 1" high LCD digital display in water resistant housing.
- Rugged load cell weighing technology with 300, 500, or 1000 pound capacity.
- Weight resolution up to 0.1 pound.
- Accuracy 0.1% of full scale.
- Built-in visual alarm and audible alarm with silence function.
- Built-in solid state relay.
- 0-100% of full scale tare weight adjustment.
- 0-100% of full scale alarm set point adjustment.
- Both large and small platform sizes available.
- Easy unit conversion from pounds to kilograms.

DESCRIPTION

The pressure of a liquefied gas remains constant as material is withdrawn as long as a liquid phase remains in the cylinder. When the liquid phase is exhausted the pressure drops very quickly and the cylinder empties without warning. This phenomenon renders a cylinder pressure gauge virtually useless. A similar situation arises when using cryogenic containers of liquid nitrogen, oxygen, and argon. The only way to monitor the contents of a cylinder of liquefied gas or a cryogenic container is by weight.

The Series 620 and 320 electronic scales are designed to give a positive indication of the amount of product remaining in the cylinder as material is being withdrawn. These units allow the user to electronically subtract the tare weight of the cylinder so that only the net contents can be read directly. The built-in alarm can be set for any weight value from 0-100% of the scales capacity. The units provide a red LED visual alarm and an audible alarm with silence function. An integral solid state relay is provided for the activation of external alarms or other equipment when the alarm set point is reached.

The scales are ruggedly constructed using one or more load cells in a sturdy stainless steel and/or aluminum diamond plate platform with mechanical stops at 150% of capacity to prevent damage.

320 Series

620G-300

The model 620G-300 with a capacity of 300 pounds has a 9.5" x 9.5" stainless steel platform that accommodates most compressed gas cylinders. For larger diameter cylinders, the 320DL-500 is available with a capacity of 500 pounds has a 36" x 36" diamond plate steel platform. The model 320ML-1000 has a 1000 pound capacity and accommodates cryogenic containers with its 36" x 36" aluminum diamond plate steel platform. A ramp is available for each model so that cylinders can easily be rolled on and off of the scale platform without lifting.

APPLICATIONS

Recommended for use with all liquefied and cryogenic containers in applications where running out of gas will cause a serious disruption in operations or a loss of product.

HOW TO ORDER

Model	Total Capacity Pounds	Resolution pounds	Platform Dimensions
620G-300	300	0.1	9.25" w x 9.25" d x 1.5" h
320DL-500	500	0.1	36" w x 36" d x 1-7/8" h
320ML-1000	1000	0.2	36" w x 36" d x 1-7/8" h
620R	ramp for 620G		9" w x 5.5" d x 1.5" h
320RL	ramp for 320DL & 320ML		36" w x 18" d x 1-7/8" h

CYLINDER SCALE FOR LIQUEFIED GASES

Model 900

FEATURES

- Heavy duty 16 gauge.
- Stainless steel cover.
- Dual dial scale - pounds and kilograms.
- Color-coded easy to read dial.

DESCRIPTION

The pressure of a liquefied gas remains constant as material is withdrawn as long as a liquid phase remains in the cylinder. When the liquid phase is exhausted the pressure drops very quickly and empties without warning. This phenomenon renders a cylinder pressure gauge virtually useless. The only way to monitor the contents of a cylinder containing a liquefied gas is by weight.

The Model 900 cylinder scale is designed to give a positive indication of the amount of product remaining in the cylinder. It allows the user to subtract the tare weight of the cylinder so that the net contents can be read directly. A color coded dial reads in pounds and kilograms. A non-skid ramp is available to make loading cylinders convenient and easy.

The scale is ruggedly constructed and features a stainless steel cover for durability.

APPLICATIONS

Recommended for use with all liquefied gases such as carbon dioxide, ammonia, nitrous oxide, fluorocarbons, hydrogen sulfide, sulfur dioxide, propane and heavier hydrocarbon gases.

SPECIFICATIONS

Tare weight range: 150 lbs. (0-68 kg.)

Product weight range: 0-150 lbs. (0-68 kg.)

Total capacity: 300 lbs (136 kg.) in 10 lb. (5 kg.) divisions.

Readability: 1 lb. (0.5 kg.) by estimation

Dimensions: 10 3/4" x 10 1/2" x 1 3/4" high

HOW TO ORDER

FLASH ARRESTOR SERIES 8491 – BRASS

DESCRIPTION

The new 8491 Series re-settable flashback arrestors offer four (4) safety devices in each unit. Safety features include protection against flashbacks with a wide range of mixtures of oxygen or air with flammable gases including hydrogen, acetylene, methane, and LPG gases. The design includes a built-in non-return (check) valve to stop reverse flow and a thermal shut off which stops gas flow in the event of a hose or pipe line fire. An easily re-settable pressure control stops gas flow in the event of reverse flow or a flashback that creates 10 psig back pressure. This feature alerts the user that a reverse flow or a flashback of greater than 10 psig has occurred. These units are easily re-set by pulling up on the pressure control ring (shown at right), no disassembly of the gas line or special tools are needed. The 8491 Series high flow capacity makes them suitable for a broad range of applications (see flow table). Units are UL listed and meet ISO 5175, EN 730, BS 6158, and AS 4603 standards.

FEATURES

- 100% flashback tested after assembly.
- UL listed and meets strict international standards .
 - UL Approved Working Pressures:
 - Acetylene @15.0 psig
 - Hydrogen/oxygen @50.0 psig
 - Hydrogen/air @150.0 psig
 - LPG @50.0 psig
 - Oxygen @143.0 psig
- Alerts user by shutting off gas flow in the event of a reverse flow or flashback exceeding 10 psig back pressure (captures back pressure in the housing, no flame or gas is exhausted to the atmosphere).
- Stainless steel flame barrier positively extinguishes flame within the housing.
- Checks reverse flow and provides positive shut-off of reverse flow over 10 psig.
- Thermal cut-off @ 165°C.
- Built-in 100 micron stainless steel sintered filter on inlet.
- High flow capacity (see flow performance table).

MATERIALS OF CONSTRUCTION

Body: Alloy 360 brass

Internals: brass

Flame barrier: stainless steel

Elastomers: Neoprene

STAINLESS STEEL FLASH ARRESTOR

Model 8492-P4FM

DESCRIPTION

The model 8492 is an ideal choice where stainless steel is desired as the material of construction. It may be used on flammable gases other than those approved by UL providing the materials of construction are compatible. When installed in a line containing a flammable gas these units will prevent reverse flow, stop, and extinguish a flashback. The unit shuts off the flow of gas in the event of a flashback or reverse flow in excess of 7 psig. Re-setting is automatic when the down stream pressure is relieved. There is no need to open the gas line and no disassembly or special tools are required.

FEATURES

- UL listed for:
Acetylene @15.0 psig
Hydrogen/air @ 50.0 psig
LPG @50.0 psig
Oxygen @143.0 psig.
- May be used on compatible corrosive flammable gases.
- Reusable – can be reused after a flashback without opening the system or removing from service.
- Stainless steel flame barrier positively extinguishes flame within the housing.
- Checks reverse flow and provides positive shut-off of reverse flow over 7 psig.
- Thermal cut-off.
- Built-in 100 micron filter on inlet.
- High flow capacity.

PURGE ASSEMBLIES

DESCRIPTION

The installation of a purge assembly on the inlet of your pressure regulator, pigtail inlet, or gas control system is highly recommended anytime a toxic, corrosive, flammable, or ultra high purity gas is to be used in the system. Purge assemblies perform the following multiple functions in your gas system during cylinder change-overs:

- Eliminate the release of toxic, corrosive, or flammable gases into the workplace.
- Maintain the integrity of an ultra high purity system.
- Protect equipment in corrosive gas service from exposure to moisture, thus preventing destructive corrosion.

DEEP PURGE VALVE SYSTEM Series 4800

DESCRIPTION

The Series 4800 deep purge valve system provides the ultimate in purging capability in a compact design with a very small internal volume. These units can be used in a wide variety of applications where contamination must be avoided during cylinder changeovers.

The deep purge valve system is an ideal accessory installed between the cylinder and the regulator of ultra high purity carrier lines for gas chromatography systems that cannot tolerate even a minimum amount of oxygen and moisture that can enter the system during cylinder changeovers.

The deep purge valve system can be used with gas mixtures containing reactive components to ensure that no moisture enters the sampling system to cause deterioration of the reactive components that can lead to concentration inaccuracies. Use of the 4820 also provides protection from the release of toxic gases into the atmosphere during cylinder changeovers.

TEE PURGE ASSEMBLIES

Series 4500

DESCRIPTION

The Series 4500 tee purge assemblies are designed to be installed between the cylinder valve and the pressure regulator. They enable the user to purge the system through the regulator with an inert gas.

The Series 4500 units feature multi-turn diaphragm packless valves and a check valve installed on the purge gas inlet. They are rated for 3000 psig.

HOW TO ORDER

Model	Material of Construction
4510-CGA*	brass

*Specify CGA connection required when ordering.

Series 4500

TEE PURGE ASSEMBLIES

Series 4600

DESCRIPTION

The Series 4600 tee purge assembly was designed for use with inert gases such as argon, helium, and nitrogen. When installed either on the inlet to a pressure regulator or on the cylinder end of a pigtail they are an ideal device for purging the cylinder inlet connection after cylinder changeover to eliminate the introduction of oxygen and water to the system. These tee purges conveniently use the gas in the cylinder for purging.

The Series 4600 can be constructed either with multi-turn or 90° lever actuated diaphragm packless valves. This entire assembly is designed to pass a helium leak rated of 1×10^{-8} sccm. They are rated for 3000 psig.

MINIATURE FORGED NEEDLE VALVES

Series 8100

DESCRIPTION

These valves are used in a wide variety of industrial and laboratory applications. They offer excellent flow control and both the brass and stainless steel models have Teflon® packing.

SPECIFICATIONS

Max. operating pressure: brass 3000 psig
 stainless steel 6000 psig
 Monel® 3500 psig
 Operating temperature range: -65° to 100°F
 Flow coefficient(C_v): brass 0.048
 stainless steel 0.48
 Monel® 0.24

CHECK VALVES

Series 8400

DESCRIPTION

Check valves prevent the return flow of gas, thus keeping foreign substances out of lines, regulators, and cylinders located upstream of the valve.

These valves are a spring loaded design with the spring on the high pressure side to protect it from foreign substances. The positive stop prevents over-stressing of the spring by sudden surges of gas pressure. An o-ring at the valve seat provides quick, efficient sealing.

HOW TO ORDER

Note: Check valves with other o-ring materials are available.

HIGH PURITY DIAPHRAGM PACKLESS VALVES

Series 8300

DESCRIPTION

The multiple metal diaphragm design and Kel-F® seat are the key elements to the high purity success of these valves. They are available in a variety of styles and fitting configurations to meet virtually any application.

The 90° lever operated option provides the inherent benefits of a diaphragm packless valve with the quick open/close action and easily identifiable operational status of a lever actuated valve.

FEATURES

- Metal diaphragm packless construction for diffusion resistant operation.
- Capable of passing a helium leak-rate test to 10^{-10} cc/sec.
- Available in multiple turn and 90° lever operated designs.

APPLICATIONS

The Series 8300 valves are recommended whenever the diffusion of atmospheric gases and moisture into a gas system is undesirable. They are a must in all ultra high purity gas transfer systems, particularly those used for gas chromatography carrier gases, samples, and calibration standards.

RELIEF VALVES

Series 8600

DESCRIPTION

These easily field adjustable relief valves provide for the protection of equipment components installed in systems where they may be exposed to over pressurization due to the failure of another component or an operator error.

FEATURES

- Working pressure to 3000 psig.
- Wide range of pressure adjustment.
- 100% tested for crack and reseal performance.
- Available in brass and stainless steel.

SPECIFICATIONS

Maximum Working Pressure @ 70°F: 3000 psig

Flow Coefficient (C_v): 0.35

Temperature Rating:

with Buna-N o-ring -10 to 250°F.
with Viton® o-ring -10 to 375°F.

O-ring Material: brass Buna-N
stainless steel Viton®

MANUAL CONTROL VALVES

Series 8500

DESCRIPTION

Manual controls are designed for direct connection to a compressed gas cylinder valve outlet. They provide a simple means of transferring the contents of a cylinder to another system or vessel. They **DO NOT** control pressure and should never be used without an operator in attendance at all times.

Four models are presented here with the following basic design features:

- Maximum inlet pressure - 3000 psig.
- Teflon® packing for smooth leak-free operation.
- Finger-tip control of flow from only a few cc per minute to very rapid withdrawal.

Series 8523 - 303 Stainless Steel with 0-3000 psig Cylinder Pressure Gauge

Model	Outlet Connection
8523H*	1/4" hose barb
8523T*	1/4" compression fitting

EZ3200	For two stage regulators

GAS DETECTION SYSTEMS

Fixed Installation Type –

Beacon 110, Beacon 200, Beacon 410A, and Beacon 800

DESCRIPTION

Gas detection should not be complicated. The Beacon™ Series is gas detection simplified. The Beacon™ Series are powerful, low cost fixed system controllers for one, two, or up to eight points of gas detection. They are microprocessor controlled, versatile, simple to install and operate, and priced to be the industry's best value single and multiple gas detection controllers.

The wide variety of sensor heads available for the Beacon Series can provide protection for many of the gases commonly used in industry or laboratories today. A comprehensive list of available detectors is provided below.

Sensors can be mounted directly at the Beacon™ housing, or can be wired remote from the controller. The digital displays have backlighting and simultaneous readout of the gas type(s) and concentration(s). The bottom mounted wiring hubs make wiring easy. An external reset switch allows alarms to be silenced from outside the controller housing.

With 10 or 12 amp rated relays, the Beacon Series can be wired directly to a variety of devices like horns, buzzers, or lights eliminating the need for costly external relays from the controller to devices.

The Beacon™ Series is housed in a NEMA 4X rated case for a weather tight seal. This case design complies with the new lock out / tag out standard and can be fully secured. An external reset switch allows the alarm to be silenced from outside of the controller housing. The Beacon™ units ship complete with a wall mounting kit for easy installation.

FEATURES

- Low cost versatile solution!!
- Compact, weatherproof, NEMA 4X enclosure.
- 115 VAC or 12 VDC operation.
- Long life sensors (2+ years typical).
- Accepts LEL/O₂/H₂/S/CO direct wire sensors (Beacon 110, 200, and 410A).
- Accepts any 4-20 mA transmitter.
- Audible alarm with reset button.
- Three programmable alarm levels.
- Built-in trouble alarm with relay.
- Relay rating 10 or 12 amps, form C.
- Provides 4-20 mA output.

INDUSTRY APPLICATIONS

- Laboratories
- Semiconductor manufacturing facilities
- Petrochemical plants & refineries
- Water & wastewater treatment plants
- Pulp & paper mills
- Gas, telephone, & electric utilities
- Parking garages
- Manufacturing facilities

ABOUT SENSORS

The sensor is the actual device that is sensing the gas. Three sensor types are available for use with the Beacon Series Controller: direct wire, gas diffusion, and sample draw. Sensors typically last 2 to 4 years, but can last for a longer or shorter time depending on the nature of the application.

GAS DETECTION SYSTEMS

Fixed Installation Type – Beacon 110, Beacon 200, Beacon 410A, and Beacon 800

DIRECT WIRE DETECTORS

Direct wire detectors are hard wired diffusion sensors to the controller and do not require a transmitter. They are, therefore, more economical than detectors requiring a transmitter. Direct wire detectors can only be used with the Beacon 110, 200, and 410A controllers. While the choice of gases is limited for hard wire detectors they can be an economical choice when available. In general, the use of a transmitter is preferred for distances over 300' to 500' to simplify calibration.

SAMPLE DRAW DETECTORS

Sample draw detectors have an integral pump, which draws the surrounding air to the detector. They are the preferred choice when used in larger areas where there is no specific point at which one can expect a gas leak. All sample draw detectors used with the Beacon Series have transmitters.

HOW TO ORDER

When ordering a Beacon system please specify the following components:

1. Controller part number (see list below)
2. Detector assemblies required. Provide gas, detection range from the list below so that we can provide the best combination for your application.

DIFFUSION DETECTORS

Diffusion detectors rely on the natural flow of air to bring the sample to the detection head. These are an excellent choice for gas cabinets or other forced flow environments where the detector is situated in a constant air flow from the potential gas release to the detector. All diffusion type detectors used with the Beacon Series have transmitters.

TRANSMITTERS

Most sensors require a transmitter to amplify the sensor signal, and to convert the gas sensor signals into a standardized output, such as 4-20 mA, for transmitting the signal to a controller. The transmitter is usually in close proximity to the sensor, and zero and span adjustments must be done at the transmitter. Note that some sensors and controllers do not require the use of a transmitter for LEL or Oxygen detection (Beacon 110, 200, and Beacon 410A), and also one is not needed for short distance wiring of H₂S or CO sensors for the Beacon 110, 200, and Beacon 410A. All transmitters used with the Beacon Series are operated from 24 VDC, and utilize either 2 or 3 wires. In general, even if a sensor can be used with out a transmitter, the use of a transmitter is often preferred for distances over 300' to 500' to simplify calibration.

Model	Description
72-2110RK	Beacon 110 single point controller
72-2102RK	Beacon 200 two point controller
72-2104A	Beacon 410A four point controller
72-2108RK	Beacon 800 eight point controller

SF6 LEAK DETECTOR

Model 3-033-R002

DESCRIPTION

The remarkable sensitivity of this hand held unit allows the user to detect sulfur hexafluoride to levels equivalent to 0.1 oz/year (3 grams/year). An advanced microprocessor is the heart of this unit. Its digital signal processing provides excellent management of the circuitry and sensing tip signal. The microprocessor monitors the sensing tip and battery voltage levels 4000 times per second, compensating for even the most minor fluctuations in signal. This translates into a stable and dependable tool in almost any environment.

Convenience features have been incorporated into the 3-033-R002 to enhance its operation. Seven levels of sensitivity provide and increase of 64 times from level 1 to level 7. Unique tri-color LEDs show a progressive and wide range of leak size indication, communicate the sensitivity level, and provide a true voltage indication of battery power level. A tactile keypad controls all functions. The housing design provides the user with a secure grip and control and places the visual indicators in direct sight during use.

FEATURES

- Microprocessor control with advanced signal processing.
- Seven sensitivity levels.
- Tactile keypad controls.
- Real-time SF6 sensitivity adjustment.
- Battery test function with battery voltage indication.
- True mechanical pumping ensures positive air flow through the sensing tip.
- Cordless and portable.
- 14" flexible stainless steel probe.
- Built-in mute feature.

SPECIFICATIONS

- Power supply: 3V DC - two "C" cell alkaline batteries.
- Max. Sensitivity: 0.1 oz/year (3 grams/year) SF6
- Operating temperature: 30° to 125° F.
- Life: Approximately 30 hours normal use
- Response time: Instantaneous
- Reset time: one second
- Warm-up time: Approximately 2 seconds
- Unit weight: 1.2 pounds
- Dimensions: 9" x 2.5" x 2.5"

HOW TO ORDER

Model	Description
3-033-R002	SFL Leak Detector
	Replace sensing tip
XP-2	Maintenance Kit (3 sensing tips and 3 tip protectors)

MINI GAS LEAK DETECTOR

Model 21-070

DESCRIPTION

The model 21-070 gas leak detector easily and quickly pinpoints gas leaks emitting from pressurized systems. Using a thermal conductivity detector with signal amplification, the instrument is zeroed in ambient air and responds to any gas mixture with a thermal conductivity different from that of air. The instrument is highly sensitive, having an intrinsically high signal to noise ratio with amplification that provides a maximum usable sensitivity.*

The model 21-070 can be operated with little or no training. Turn it on, zero, probe for leaks: its that simple. As the instrument probe passes over the leak, a sample is drawn into the conductivity cell. When a leak is discovered a signal is registered on the LED bar graph. No messy soap solution, so system contamination

CAUTION

This leak detector is NOT designed to be used to determine leaks of combustible gases. It is designed to determine low level leaks of any gas having a different thermal conductivity than air. Utilizing this property it is, therefore, not specific to any gas or vapor. A combustible gas leak detector should be used for determination of combustible gas leaks in possible hazardous conditions.

SPECIFICATIONS

Detector: thermal conductivity w/thermistors
 Readout: LED bar graph with yellow and red segments
 Line Voltage: 115 V, 60 Hz
 Battery: Rechargeable NiCCd, 7.2 V/800 mAh
 Battery Life: 3.5 hours; may be recharged to 95% in 1 hour
 Dimensions: 3.25" W x 1.75" H x 5.25" L
 Weight: Instrument 1.05 lbs
 Charger 0.61 lbs

*SENSITIVITY

Helium 1.0 x 10⁻⁵ cc/sec
 Argon 1.0 x 10⁻⁴ cc/sec
 COO2 1.0 x 10⁻⁴ cc/sec
 Refrigerant 1.0 x 10⁻⁴ cc/sec

HOW TO ORDER

21-070	mini gas leak detector
59-050	carrying case

WELDING PURGE MONITOR

Model PE-100

DESCRIPTION

The PE-100 is an advanced instrument to detect the level of oxygen in purging gas to indicate when the oxygen content is at a satisfactory level to weld. The exact oxygen level is provided, thus preventing the excessive use of purge gas to ensure that the weld will be oxidation free. The monitor provides a continuous oxygen level readout during welding to detect unforeseen purge problems that can cause low quality welds.

The monitor may also be used to check confined spaces for safe oxygen levels before personnel enter the area and while they are working.

PE-100 has an innovative push button auto-calibration feature that allows the user to calibrate at atmospheric oxygen levels and again at the lowest oxygen reading for increased accuracy.

FEATURES

- Oxygen Detection range 0.01 to 20.94%
- Push button self-calibration
- Low battery indicator
- Low sensor indicator
- Large digit readout
- Optional Tripod mount
- Quick connect/disconnect fittings for gas purge tubing

SPECIFICATIONS

Detection range:	0.01 to 20.94% oxygen
Accuracy:	At 20.0% = + 0.2% At 2% = + 0.02%
Approx. Dimensions:	7.8" high x 3.7" wide x 2.5" deep
Power:	2 AA batteries
Weight:	7.4 ounces

HOW TO ORDER

PE-100 welding purge monitor in rugged carrying case includes: SS probe for sampling, two meter sampling hose, sampling bulb, carrying strap for neck or wrist, 2 AA batteries, and user instruction book.

KITAGAWA GAS DETECTION SYSTEM

DESCRIPTION

The Kitagawa Gas Pump and detector tube system is a simple, inexpensive, on the spot means of gas sampling and analysis. With a minimum of training, non-technical employees can perform day to day industrial hygiene screenings, perform QC analysis for process control, and many other analyses. There are over 300 detector tubes covering a long list of gases and concentrations.

The Kitagawa system has been developed to be a reliable method of on the spot gas analysis. It has been constantly improved to ensure accuracy and simplicity of use. An accurate analysis can be obtained in a few minutes.

With a single stroke of the Kitagawa pump fitted with a selected detector tube an accurate analytical result can be read directly from the detector tube scale without the use of any other instrumentation.

FEATURES

- A complete sampling and analysis system for determining the concentration of gases and vapors on the spot.
- Only two components required – sampling pump and detector tube.
- No calibration required.
- No batteries required.
- Low cost per analysis.
- May be used in hazardous classification areas.
- Over 300 detector tubes available.
- Manufactured with ultra-high purity reagents.
- Scale on each tube provides a direct reading of the concentration.
- Detector tubes have a thin plastic coating to prevent shattering and dispersement of reagents in the event of breakage.
- Most analyses require only one pump stroke.

SA-10-AP20
One Hand Operation Switch

AP-20 Air Sampling Pump Kit

B-191 Tube Tip Cutter

AS-1 Air Flow Indicator determines the velocity and direction of air flow.

EQUIPMENT AND TUBES ARE SHOWN PAGES 127-131

HOW TO ORDER

P/N	Description
AP-20	Aspirating pump with carrying case, two rubber tube connectors, a container of lubricant, and an instructions sheet.
SGD-BK-346	Consists of a pressure regulator-flowmeter with CGA 346 cylinder connection, the specially calibrated flowmeter that provides ease of measuring carbon monoxide, carbon dioxide, oil mist, oxygen, and water vapor, an adjustable wrench, a timer, a tube tip cutter, and instruction manual. Note: Detector tubes are not included and must be ordered separately.
SGD-BK-590	Consists of a pressure regulator-flowmeter with CGA 590 cylinder connection, the specially calibrated flowmeter that provides ease of measuring carbon monoxide, carbon dioxide, oil mist, oxygen, and water vapor, an adjustable wrench, a timer, a tube tip cutter, and instruction manual. Note: Detector tubes are not included and must be ordered separately.
SGD-BK-P4M	Consists of a pressure regulator-flowmeter with 1/4" NPT male inlet connection, the specially calibrated flowmeter that provides ease of measuring carbon monoxide, carbon dioxide, oil mist, oxygen, and water vapor, an adjustable wrench, a timer, a tube tip cutter, and instruction manual. Note: Detector tubes are not included and must be ordered separately.
SGD-BK-SCUBA	Consists of a pressure regulator-flowmeter with a standard scuba yoke connection with a bleeder valve, the specially calibrated flowmeter that provides ease of measuring carbon monoxide, carbon dioxide, oil mist, oxygen, and water vapor, an adjustable wrench, a timer, a tube tip cutter, and instruction manual. Note: Detector tubes are not included and must be ordered separately.
AS-1	Air flow indicator kit. Spot test system to determine the direction of air flow. Kit consists of aspirating bulb, carrying case and one box of No. 300 tubes.
SA-10	One-hand operation switch. This device is useful for sampling on a ladder or narrow spaces where two-hand operation of the pump is not practical.
B-191	Tube tip cutter – provides a safer means of removing tube tips. Pieces do not scatter and are accumulated in the container body.
BOOK	Kitagawa detector tube handbook.

COMPRESSED BREATHING AIR TEST TUBES

600SP	Carbon monoxide - Breathing air, 5-100 ppm
601SP	Carbon dioxide - Breathing air, 100-3000 ppm
602SP	Oil mist - Breathing air, 0.3-5 mg/m ³
603SPA	Water vapor - Breathing air, 20-160 mg/m ³
604SP**	Oxygen - Breathing air, 2-24%

**A 50 ml plastic syringe and a 1 meter vinyl tube are optionally necessary.

DETECTOR TUBES FOR DISSOLVED SUBSTANCES IN SOLUTION

10 tubes per box	
200SA	Sulphide ion, 2-1000 ppm
200SB	Sulphide ion, 0.5-10 ppm
201SA	Chloride ion, 10-2000 ppm
201SB	Chloride ion, 3-200 ppm
203S	Copper ion, 1-100 mg/L
204S	Cyanide ion, 0.2-5 ppm
205SL	Salinity, 0.01-0.8%
234SA	Free residual chlorine, 0.4-5 ppm

SGD-BK-CGA Compressed Breathing Air Sampling Kit

ALPHABETICAL DETECTOR TUBE LIST

DETECTOR TUBES 10 tubes per box except as noted		Model #	Description
133A	Acetaldehyde, 0.004-1.0% (concentration chart method)	141SA*	Carbon disulfide, 30-500 ppm
133SB	Acetaldehyde, 5-140 ppm	141SB*	Carbon disulfide, 0.8-50 ppm
216S	Acetic Acid, 1-50 ppm	100	Carbon monoxide, 5-1000 ppm (concentration chart method)
216S	Acetic anhydride, 1-15 ppm	106B	Carbon monoxide in the presence of ethylene, 10-1000 ppm
102SA	Acetone, 0.1-5.0%; Tetrahydrofuran	106C	Carbon monoxide in the presence of ethylene and nitrogen oxides, 10-1000 ppm
102SC	Acetone, 0.01-4.0%	106S	Carbon monoxide, 10-250 ppm
102SD	Acetone, 20-5000 ppm	106SA	Carbon monoxide, 5-2000 ppm
101S	Acetylene, 50-1000 ppm	106SC	Carbon monoxide, 1-50 ppm
280S*	Acetylene-Ethylene, C2H2 20-300 ppm; C2H4 200-2000 ppm	106SH	Carbon monoxide, 0.1-2.0%
136	Acrolein, 0.005-1.8%	106SS	Carbon monoxide, 30-500 ppm
216S	Acrylic acid, 1-50 ppm	106UH	Carbon monoxide, 0.1-20%
128SA	Acrylonitrile, 0.1-3.5%	147S*	Carbon tetrachloride, 0.5-60 ppm
128SB	Acrylonitrile, 10-500 ppm	239S*	Carbonyl sulfide, 5-60 ppm
128SC	Acrylonitrile, 1-120 ppm	109SA	Chlorine, 1-40 ppm
128SD	Acrylonitrile, 0.2-20 ppm	109SB	Chlorine, 0.1-10.0 ppm
300	Air flow indicator tube	109U	Chlorine, 0.05-2 ppm
184S	Allyl alcohol, 10-160 ppm	116	Chlorine dioxide, 1-20 ppm
132SC(1)*	Allyl chloride, 0.1-12.0 ppm	178SB*	Chlorobenzene, 1-140 ppm
105SA	Ammonia, 0.5-10%	152S*	Chloroform, 23-500 ppm
105SB	Ammonia, 50-900 ppm	172S*	Chloropicrin, 0.05-16.0ppm
105SC	Ammonia, 5-260 ppm	169S*	Chloroprene, 0.5-20 ppm
105SE	Ammonia, 1-200 ppm	132SC(3)*	m-Chlorotoluene, 0.1-12.0 ppm
105SD	Ammonia, 0.2-20 ppm	132SC(4)*	o-Chlorotoluene, 0.1-12.0 ppm
105SH	Ammonia, 0.5-30%	132SC(5)*	p-Chlorotoluene, 0.1-12.0 ppm
105SM	Ammonia, 0.1-1.0%	183U	Cresol, 0.5-25.0 ppm
181S	Aniline, 1-30 ppm	190U(1)	Crotonaldehyde, 5-500 ppm
140SA	Arsine, 5-160 ppm	111U(4)	Cumene, 10-1000 ppm
121U	Arsine, Phosphine, 0.05-2.0 ppm	115S	Cyclohexane, 0.01-0.6%
190U(6)	Benzaldehyde, 5-500 ppm	206U	Cyclohexanol, 5-500 ppm
118SB*	Benzene, 5-200 ppm	197U	Cyclohexanol, 2-100 ppm
118SC	Benzene, 1-100 ppm	197U(1)	Cyclohexanone, 2-100 ppm
118SD*	Benzene, 0.1-75 ppm	111U(5)	Cyclohexene, 10-1000 ppm
118SE*	Benzene, 0.2-80 ppm	105SD	Cyclohexylamine, 1-20 ppm
132SC(2)*	Benzyl chloride, 0.1-12.0 ppm	111U(6)	Decahydronaphthalene, 10-1000 ppm
114	Bromine, 1-20 ppm	111U(7)	n-Decane, 10-1000 ppm
157SB(1)	Bromochloromethane, 0.4-80 ppm	190U	diacetone alcohol, 10-250 ppm
157SB(2)	Bromoform, 0.4-80 ppm	242S	Diborane, 0.02-5.0 ppm
168SA	Butadiene, 0.03-2.6%	105SD	Dibutylamine, 2-20 ppm
168SB	Butadiene, 30-600 ppm	214S	o-Dichlorobenzene, 5-100 ppm
168SC	Butadiene, 2.5-100 ppm	215S	p-Dichlorobenzene, 10-150 ppm
168SD*	Butadiene, 0.5-10.0 ppm	235S*	1,1-Dichloroethane, 10-160 ppm
221SA	n-Butane, 0.05-0.6%	230S*	1,2-Dichloroethane, 5-50 ppm
190U	1-Butanol, 5-100 ppm	223S*	2,2-Dichloroethyl ether, 2-30 ppm
189U	2-Butanol, 4-300 ppm	132SC(6)*	1,1-Dichloroethylene, 0.1-12.0 ppm
138U	Butyl acetate, 10-400 ppm	145S*	1,2-Dichloroethylene, 5-400 ppm
139SB	Butyl acetate, 0.01-1.0%	180S*	Dichloromethane, 10-1000 ppm
211U	Butyl acrylate, 5-60 ppm	157SB(3)	1,2-Dichloropropane, 0.4-80 ppm

120SC	Hydrogen sulfide, 0.005-0.16%	224SA	Monoethanol amine, 0.5-50 ppm
120SD	Hydrogen sulfide, 1-60 ppm	105SD	Morpholine, 2-22 ppm
120SE	Hydrogen sulfide, 0.5-40 ppm	153U	Naphthalene, 10-100 ppm
120SF	Hydrogen sulfide, 25-2000 ppm	129	Nickel carbonyl, 20-700 ppm
120SH	Hydrogen sulfide, 0.1-4.0%	233S	Nitric acid vapor, 1-20 ppm
120SM	Hydrogen sulfide, 0.05-1.2%	117SA	Nitrogen dioxide, 20-1000 ppm
120U	Hydrogen sulfide, 0.2-6.0 ppm	117SB	Nitrogen dioxide, 0.5-30.0 ppm
120UH	Hydrogen sulfide, 2-20%	117SD*	Nitrogen dioxide, 0.1-1.0 ppm
120UT	Hydrogen sulfide, 2.5-40%	174A	Nitrogen oxide and dioxide, NO 10-300 ppm; NO2 1-40 ppm
282S	Hydrogen sulfide-Mercaptans, H2S 1-30 ppm; R*SH 0.5-5 ppm		

ALPHABETICAL DETECTOR TUBE LIST CONTINUED

Model #	Description	Model #	Description
174B*	Nitrogen oxide and dioxide, NO 10-300 ppm; NO2 1-40 ppm	103SB	Sulfur dioxide, 0.02-0.3%
175SA	Nitrogen oxides, 20-250 ppm	103SC	Sulfur dioxide, 20-300 ppm
175SH	Nitrogen oxides, 100-2500 ppm	103SD	Sulfur dioxide, 1-60 ppm
175U	Nitrogen oxides, 0.5-30 ppm	103SE	Sulfur dioxide, 0.25-10 ppm
111U(12)	n-Nonane, 10-1000 ppm	103SF	Sulfur dioxide, 0.02-0.3%
186	Organic gas checker	103SG	Sulfur dioxide in Carbon dioxide, 0.1-25 ppm
186B	Organic gas qualitative detector tube	103SF*	Sulfur dioxide in flue gas, 0.02-.03%
159SA*	Oxygen, 2-24%	244U	Sulphuric acid, 0.5-5 mg/m ³
159SB*	Oxygen, 2-24% (for explosion hazard areas)	135SA	Tetrachloroethylene, 5-300 ppm
159SC*	Oxygen, 1.5-24% (non-heating type)	135SB	Tetrachloroethylene, 0.2-10 ppm
281S*	Oxygen, O2 2-10%; CO2 1-20% (separation measurement)	135SG	Tetrachloroethylene, 0.1-2.0%
182SA	Ozone, 50-1000 ppm	135SM	Tetrachloroethylene for process control, 50-1250 ppm
182SB	Ozone, 2.5-100 ppm	243U	Tetraethoxysilane, 5-200 ppm
182U	Ozone, 0.025-3.0 ppm	102SA	Tetrahydrofuran, 0.2-5.0%
113SB	Pentane, 50-1000 ppm	162U	Tetrahydrofuran, 20-400 ppm
210U	Pentyl acetate, 10-200 ppm	190U(5)	Tetrahydrothiophen, 5-500 ppm
105SD	Pentylamine, 2-22 ppm	124SA	Toluene, 10-500 ppm
183U	Phenol, 0.5-25.0 ppm	124SB	Toluene, 2-100 ppm 124SH Toluene, 100-3000 ppm
146S	Phosgene, 0.1-20 ppm	105SD	o-Toluidine, 2-22 ppm
121SA	Phosphine in acetylene, 20-800 ppm	105SD	p-Toluidine, 2-20 ppm
121SB	Phosphine in acetylene, 5-90 ppm	236S*	1,1,2-Trichloroethane, 10-100 ppm
121SC	Phosphine, 20-1400 ppm	236S(1)*	1,1,2-Trichloroethane, 10-100 ppm
121SD	Phosphine, 0.25-20.0 ppm	134SA	Trichloroethylene, 5-300 ppm
121SH	Phosphine, 100-3200 ppm	134SB	Trichloroethylene, 0.2-36.8 ppm
121U	Phosphine, 0.05-2.0 ppm	134SG	Trichloroethylene, 0.05-2.0%
121SS	Phosphine for fumigation, 200-6000 ppm	132SC(8)*	Trichlorotoluene, 0.1-12.0 ppm
125SA	Propane, 0.02-0.5%	213S	Triethylamine, 1-20 ppm
190U(4)	1-Propanol, 5-500 ppm	222S	Trimethylamine, 1-20 ppm
216SC	Propionic acid 3-50 ppm	111U	1,2,4-Trimethyl benzene, 10-1000 ppm
139SB	Propyl acetate, 0.01-1.4%	113SB	2,2,4 Trimethyl pentane, 100-4000 ppm
151U	Propyl acetate, 20-1000 ppm	216S	n-Valeric acid, 3-70 ppm
105SD	Propylamine, 1-20 ppm	237S	Vinyl acetate, 5-120 ppm
185S	Propylene, 50-1000 ppm	132SA	Vinyl chloride, 0.05-1.0%
122SC(2)	Propylene glycol, 1-15 ppm	132SB	Vinyl chloride, 5-500 ppm
163SA	Propylene oxide, 0.05-5.0%	132SC	Vinyl chloride, 0.1-12.0 ppm
122SC(1)	Propylene oxide, 1-15 ppm	177SA	Water vapor, 1.7-33.8 mg/L
219S(1)	Pyridine, 0.05-10 ppm	177U	Water vapor, 0.05-2.0 mg/L
105SD	Pyridine, 0.5-10 ppm	177UL	Water vapor, 3-80 LB/MMCF
240S	Silane, 0.5-50 ppm	177UR	Water vapor, 2-12 LB/MMCF
158S	Styrene, 2.5-300 ppm	143SA	Xylene, 5-1000 ppm
158S(1)	Styrene, 2.5-300 ppm	143SB	Xylene, 5-200 ppm
158SB*	Styrene, 1-100 ppm		
103SA	Sulfur dioxide, 0.1-3.0%		

*Each box contains tubes for 5 measurements

COMPRESSED BREATHING AIR TEST TUBES

600SP	Carbon monoxide - Breathing air, 5-100 ppm
601SP	Carbon dioxide - Breathing air, 100-3000 ppm
602SP	Oil mist - Breathing air, 0.3-5 mg/m ³
603SPA	Water vapor - Breathing air, 20-160 mg/m ³
604SP**	Oxygen - Breathing air, 2-24%

**A 50 ml plastic syringe and a 1 meter vinyl tube are optionally necessary.

DETECTOR TUBES FOR DISSOLVED SUBSTANCES IN SOLUTION

10 tubes per box

200SA	Sulphide ion, 2-1000 ppm
200SB	Sulphide ion, 0.5-10 ppm
201SA	Chloride ion, 10-2000 ppm
201SB	Chloride ion, 3-200 ppm
203S	Copper ion, 1-100 mg/L
204S	Cyanide ion, 0.2-5 ppm
205SL	Salinity, 0.01-0.8%
234SA	Free residual chlorine, 0.4-5 ppm

CYLINDER HOLDING DEVICES

OSHA regulations require compressed gas cylinders to be secured from toppling when in storage or in use. The devices shown here will help you comply with these regulations.

WALL MOUNT CYLINDER HOLDER - MODEL 400

This cast aluminum cylinder holder provides an easy way to secure cylinders to a wall, in a gas storage cabinet, or other stable surface. The holder is attached with bolts or lag screws using the pre-formed holes 7 inches apart. The holder can be used with cylinders from 4 to 14 inches in diameter. Cylinders are held firmly in place with a nylon strap fitted with a sturdy buckle, with an optional steel chain and hook, or both strap and chain

HOW TO ORDER

Model	Description
400	Wall mount cylinder holder with strap
400C	Wall mount cylinder holder with chain and hook
400CS	Wall mount cylinder holder with strap, chain and hook
400 RS	Replacement strap.

BENCH TYPE CYLINDER HOLDER - MODEL 420

This holder is designed to prevent toppling of cylinders when they are next to a lab or work bench and cannot be secured to a wall. The special screw clamp holds securely to a table top without marring the surface. The holder can be used with cylinders from 4 to 14 inches in diameter. Cylinders are held firmly in place with a nylon strap fitted with a sturdy buckle, with an optional steel chain and hook, or with both strap and chain.

HOW TO ORDER

Model	Description
420	Bench mount cylinder holder with strap
420C	Bench mount cylinder holder with chain and hook
420CS	Bench mount cylinder holder with strap, chain and hook
400 RS	Replacement strap.

SMALL CYLINDER STAND

Model 450

DESCRIPTION

This stand provides increased stability to cylinders with diameters of 4" to 7-3/8". It is constructed of stainless steel. Four thumb screws hold the stand securely to the cylinder. Stand height is 10".

LECTURE BOTTLE HOLDERS

Lecture bottles have rounded ends and require some means of support when in use. We provide two types of holders here that meet most requirements.

NON-TIP STAND - MODEL 475

This stand offers a convenient method of securing a lecture bottle on a table or lab bench. The stand is made of light weight brushed aluminum, yet the large diameter base provides stability even when a regulator is installed on the bottle.

WALL MOUNT LECTURE BOTTLE BRACKET - MODEL 480

This bracket is made of anodized aluminum and has spring clips that provide firm, secure support to the lecture bottle. The bracket is ideal for securing lecture bottles to lab cart or bench set-ups, in carrying cases for portable systems, or in storage cabinets

LARGE CYLINDER STAND

Model 460

DESCRIPTION

This stand provides increased stability to cylinders with a diameter of 7"-9.5" in situations where it is not possible to secure the cylinder to a wall or a bench with the model 400 or 420 cylinder holders. The cylinder can be rolled on and off with ease and is firmly held in place or quickly released by the cylinder holding band. With this unique design the cylinder rests on a steel plate and uses the cylinder's own weight to help keep the cylinder and stand stable and eliminate unsafe cylinder "ride up" that is common in some competitive models. Constructed of steel painted green.

Dimensions: 18" x 18" x 12.5" high

Weight: 13 lbs.

475

480

CYLINDER FLOOR STANDS

Series 465

Available in two and three cylinder models, these floor stands are designed and built to provide safe storage of compressed gas cylinders with diameters up to 12" when a wall, post or bench is not available to secure the cylinder. Fully welded construction from 11 gauge and heavier plate steel and a quality epoxy powder paint finish provide structural integrity and long service life. Surfaces coming in contact with the cylinders are protected with vinyl edge guards. Cylinders are held securely in place with 1.5" polypropylene straps with steel cinch buckles. Shipped assembled via UPS.

HOW TO ORDER

Model	Description	Dimensions	Weight
465-2	Two cylinder floor stand	28" wide x 30" high x 12" deep	41 lbs
465-3	Three cylinder floor stand	40" wide x 30" high x 12" deep	56 lbs

“GAS STATION” PROCESS STANDS

Series 495

DESCRIPTION

There are many situations where it would be more convenient to locate gas cylinders and distribution systems near the process, but away from a wall or other secure fixture. The “Gas Station” solves this problem. It can be located in any open area and support two or three cylinders and the associated gas distribution equipment. The stand is secured to the floor with bolts through the four pre-drilled holes provided in the base. Cylinders sit on the base plate and are securely held to the steel frame with sturdy nylon belts. A changeover manifold or other distribution equipment can be conveniently mounted to the plate above the cylinders. Unit is painted gray. The unit is shipped unassembled via UPS. Assembly is easily accomplished in 10-15 minutes.

HOW TO ORDER

Model 495-2 Two Cylinder Gas Station

Dimensions: 28" W x 72 1/2" H x 12" D

Weight: 56 pounds

Model 495-3 Three Cylinder Gas Station

Dimensions: 40" W x 72" H x 12" D

Weight: 78 pounds

CYLINDER STORAGE RACKS

Series 490

FEATURES

- Safe cylinder restraint
- Organized gas cylinder storage
- Simple installation
- Uses space efficiently
- Removable and relocatable

DESCRIPTION

The storage of compressed gas cylinders to comply with Federal, State and Local regulations often presents a number of problems. These new cylinder storage racks can help organize your cylinder storage and help you comply with the myriad of regulations.

Because the frame is predrilled to accommodate anchoring the rack to the floor they are ideal for situations where cylinder must be located away from a wall or other securing fixture. Racks are available in standard sizes to hold one to nine cylinders. Custom racks are available. Standard rack configurations are shown below.

The unique design of square steel tubing (2" x 2") components welded together to form the frame provides the rigidity necessary to allow the frame to be constructed without a bottom. This allows cylinders to be rolled into the frame without lifting.

Racks are provided with either single or dual restraint steel chains to secure the cylinders. Single restraint racks secure the individual cylinders with a chain for each cylinder located at the top of the rack. Dual restraint models have a set of chains for each cylinder at 15" and 30" from the floor.

Racks are finished with a black powder coating to provide long lasting protection. These cylinder storage racks meet the requirements of the National Fire Protection Association, National Fire Codes, Uniform Fire Codes, Uniform Building Codes and Seismic Zone 4 Restraint Regulations, Compressed Gas Association, and OSHA.

HOW TO ORDER (other configurations available on request)

Model	Description	Nominal Dimensions
Single restraint models		
490-111	1 cyl wide x 1 cyl deep	16" W x 16" D x 30" H
490-121	2 cyl wide x 1 cyl deep	30" W x 16" D x 30" H
490-131	3 cyl wide x 1 cyl deep	44" W x 16" D x 30" H
490-112	1 cyl wide x 2 cyl deep	16" W x 26" D x 30" H
490-122	2 cyl wide x 2 cyl deep	30" W x 26" D x 30" H
490-132	3 cyl wide x 2 cyl deep	44" W x 26" D x 30" H
490-113	1 cyl wide x 3 cyl deep	16" W x 38" D x 30" H
490-123	2 cyl wide x 3 cyl deep	30" W x 38" D x 30" H
490-133	3 cyl wide x 3 cyl deep	44" W x 40" D x 30" H
Dual Restraint Models		
490-211	1 cyl wide x 1 cyl deep	16" W x 16" D x 30" H
490-221	2 cyl wide x 1 cyl deep	30" W x 16" D x 30" H
490-231	3 cyl wide x 1 cyl deep	44" W x 16" D x 30" H
490-212	1 cyl wide x 2 cyl deep	16" W x 26" D x 30" H
490-222	2 cyl wide x 2 cyl deep	30" W x 26" D x 30" H
490-232	3 cyl wide x 2 cyl deep	44" W x 26" D x 30" H
490-213	1 cyl wide x 3 cyl deep	16" W x 38" D x 30" H
490-223	2 cyl wide x 3 cyl deep	30" W x 38" D x 30" H
490-233	3 cyl wide x 3 cyl deep	44" W x 40" D x 30" H

All cylinder racks must ship motor freight.

GAS SAFETY STORAGE CABINETS

Series 7000

DESCRIPTION

Gas safety storage cabinets are designed to provide local exhaust gas control to enhance the safety of storing or using hazardous gases. The use of gas cabinets provides a convenient way to achieve separation of gases by their classifications to satisfy both national and local fire and building codes.

When connected to a suitable exhaust system, air is drawn through the cabinet ensuring that any gas leakage is carried away and does not accumulate in the storage or work area. The cabinets can be fitted with manifolds or other gas controls so that both the cylinder and the control system are enclosed. When operators access the controls through the access window and a proper exhaust system is in operation, the cabinet has the capacity to allow 150-200 linear feet per minute of air to pass across the open window face to ensure that workers are not exposed.

FEATURES

- All welded construction using 11 gauge steel, epoxy painted. Texture finish outside, smooth finish on inside of cabinet.
- Exhaust vent located on top of cabinet is 6" diameter x 3" high.
- 165° F. sprinkler head with bee's wax coating located in cabinet top.
- Cylinder brackets accommodate 7"-9" diameter cylinders. The brackets can move vertically and horizontally for precise pigtail alignment.
- Self-latching and closing window(s) with 1/4" thick wire glass.
- Self-latching and closing door(s) with bottom louvers and flush mounted stainless steel paddle latch(es). Optional keyed latches available.
- All stainless steel fasteners.
- Meets or exceeds the Uniform Fire Code.

HOW TO ORDER

Model	Description
7100	one cylinder cabinet
7200	two cylinder cabinet
7300	three cylinder cabinet
7400	four cylinder cabinet

OPTIONS:	Model
• Keyed door latch(es)	7000-1
• Keyed window latch(es)	7000-2
• Adjustable small cylinder shelf	7000-3
• Fusible link to close door louvers	7000-4

CABINET PHYSICAL DATA

Model	Cylinder Capacity	Dimensions* Outside	Door Opening	Weight	Exhaust Flow Required (SCFM)
7100	one	18"w x 18"d x 72"h	16"w x 70"h	235 lbs.	175
7200	two	24"w x 18"d x 72"h	22"w x 70"h	283 lbs.	250
7300	three	36"w x 18"d x 72"h	left 22"w x 70" right 16"w x 70"	331 lbs.	450
7400	four	48"w x 18"d x 72"h	left 22"w x 70" right 22"w x 70"	391 lbs.	600

*Overall cabinet height including exhaust vent is 75".

CYLINDER HAND TRUCKS

These hand trucks are specially designed to hold and easily transport heavy compressed gas cylinders by persons of moderate strength. They feature arc welded tubular steel construction for strength. All models roll quietly and smoothly on large semi-pneumatic or solid rubber tired wheels and casters for better maneuverability over rough or uneven surfaces. Trucks are finished with green, scratch resistant, high gloss, electrostatically applied, oven baked powder coat.

MODEL 6114 SINGLE CYLINDER HAND TRUCK

This unit is designed to handle one T or K type cylinder. It has two 4" rear casters, that fall into place when in use, to provide greater stability. The operator carries no load and has greater control over the truck. The rear wheel assembly is easily returned to the retracted position for storage. The cylinder is held securely on the truck by a safety chain.

MODEL 6214 TWO CYLINDER HAND TRUCK

Designed to handle two T or K type cylinders the 6214 has longer handles for ease of mobility and good load control. Retractable 4" rear casters drop into place when needed for extra load handling safety or collapse and lock into the frame for storage. The truck has dual binding chains for extra security and solid 10" rubber front wheels.

SPECIAL CYLINDER WRENCHES

MODEL 90001A

This universal cylinder wrench has 3 openings (3/4", 1-1/8", 1-1/4") for tightening the various cylinder valve connections and most commonly used gas connections. Not non-sparking.

MODEL 90002

This wrench is a basic 3/8" square for opening cylinder valves that do not have hand wheels, such as chlorine and hydrogen sulfide.

MODEL 90003

The special configuration of this wrench provides an easy method of opening extra tight, hand wheel operated cylinder valves and removing difficult cylinder caps.

Remove difficult cylinder caps

Open tight valves easily

316 STAINLESS STEEL FLEXIBLE HOSES

Series 601, 604, and 605

DESCRIPTION

Series 601 hoses are constructed of 1/4" I.D. teflon® lined stainless steel braid, rated for 3000 psig. The 601 hoses are fitted with 1/4" NPT brass end connections; they make excellent economical manifold pigtails.

The Series 604 hoses are constructed of double braided stainless steel, fitted with stainless steel 1/4" NPT end connections, rated for 3000 psig, and cleaned for oxygen service.

SERIES 601

- 1/4" I.D. Teflon® lined 316 stainless steel braided hose
- Rated for 3000 psig
- 601 1/4" NPT female x 1/4" NPT female
601MF 1/4" NPT male x 1/4" NPT female
- Cleaned for oxygen service.

SERIES 604 AND 605

- 1/4" I.D. 316 stainless steel fitting and inner core with 304SS or 321SS double braided hose. (605 Series has protective outer armor to provide greater safety and kink resistance.)
- Rated for 3000 psig
- 1/4" NPT female or male stainless steel end connections
- Cleaned for oxygen service.

SPECIAL HOSES

We can provide any of the hoses on this page in different lengths and with a wide variety of end fittings.

HOW TO ORDER

Model	Length	Model	Length	Model	Length
601-2	2.0 feet	604MF-2	2.0 feet	605M-2	2.0 feet
601MF-2	2.0 feet	604-3	3.0 feet	605MF-2	2.0 feet

CRYOGENIC TRANSFER HOSES – Series 607C

- 1/2" I.D. 316 stainless steel double braided hose with 304SS protective outer armor to provide greater safety and kink resistance
- Rated for 2150 psig
- 1/2" 45° flare female stainless steel connections (CGA 295) or 5/8" 45° flare (CGA 440) for oxygen
- Cleaned for oxygen service.

SPECIAL HOSES

We can provide any of the hoses on this page in different lengths and with a wide variety of end fittings.

HOW TO ORDER

Model		Length
607C-4	for nitrogen and argon	4.0 feet
607C-6	for nitrogen and argon	6.0 feet
607C-4-440	for oxygen	4.0 feet

PRESSURE GAUGES

DESCRIPTION

The selection of brass, stainless steel, and monel® gauges presented here represent those used on pressure regulators offered in this catalog. They can be used as repair parts or for installation in other systems.

FEATURES

- 1/4" NPT lower male connection.
- Cleaned for oxygen service - brass and stainless steel only.

HOW TO ORDER

BRASS WITH BRASS CASE - 2 1/2" DIA.

Model	Pressure Range - psig

GAUGES WITH FACE SEAL FITTINGS

DESCRIPTION

On some high purity regulators the gauges are connected to the regulator body by using face seal fittings rather than NPT threads.

FEATURES

- 1/4" female face seal connection.
- Dual scale dial psig/bar.
- Cleaned for oxygen service.

HOW TO ORDER

316 stainless steel with stainless steel case 2" dia.

Model	Pressure Range
9122-4VF-3030	30" vac.- 0-30 psig (-1.0 - 2 bar)

CGA CYLINDER CONNECTIONS

DESCRIPTION

The standard cylinder connections shown in the table below convert CGA cylinder valve outlets to 1/8" NPT male, or 1/4" NPT male, or 1/4" face seal male.

Caution: When changing the gas service of a regulator or gas system by changing the cylinder connections, the regulator or system must be thoroughly cleaned prior to the introduction of the new gas. It is strongly recommended that you consult with your supplier before attempting any conversion to confirm that the intended conversion can indeed be performed safely, or that such equipment be returned to your supplier for conversion.

HOW TO ORDER

Order by CGA No. and description, i.e. "CGA 350 brass cylinder connection". "X" indicates availability.

CGA CONNECTIONS GASKETS

Some standard connections and all DISS connections require a gasket to achieve a leak-free connection. Gaskets should be changed each time the connection is attached to the cylinder valve.

HOW TO ORDER

Model	Description
CGA110WA	Teflon gasket for CGA 110 & 679
CGA170WA	Teflon gasket for CGA 170
CGA180WA	Teflon gasket for CGA 180
CGA 240 WA	Teflon gasket for CGA 240
CGA320/330WA	Teflon gasket for CGA 320 & 330
CGA660/670WA	Teflon gasket for CGA 660 & 670
CGA 678/680WA	Teflon gasket for CGA 678 & 680
CGA679PB	Lead washer for CGA 679
CGA 705WA	Teflon gasket for CGA 705
DISS-NI	Nickel gasket for CGA 632 thru 726
DISS-K	Kel-F gasket for CGA 632 thru 726

UHP (DISS) CYLINDER CONNECTIONS

DESCRIPTION

This special group of cylinder connections was developed through the cooperation of industry and the Compressed Gas Association for use with ultra purity gases primarily used in conjunction with semiconductor chip manufacturing applications. The sealing surfaces are similar to a face seal connection used with tubing and they require either a nickel gasket or Kel-F gasket to achieve a seal. They are only available in stainless steel.

FEATURES

- Available with in three mating connection styles:
 - 1/4" face seal male
 - 1/4" NPT male
 - 1/4" tube stub.
- Supplied as a set nut, nipple, and nickel gasket.

DISS GASKETS

All DISS connections require a gasket to achieve a leak-free connection. Gaskets should be changed each time the connection is attached to the cylinder valve.

HOW TO ORDER

Model	Description
DISS-NI	Nickel gasket for CGA 632 thru 726
DISS-K	Kel-F gasket for CGA 632 thru 726

HOW TO ORDER

Model	Description
DISS632-P4M	632 x 1/4" NPT male
DISS632-V4M	632 x 1/4" male face seal
DISS632-T4S	632 x 1/4" tube stub
DISS634-P4M	634 x 1/4" NPT male
DISS634-V4M	634 x 1/4" male face seal
DISS634-T4S	634 x 1/4" tube stub
DISS636-P4M	636 x 1/4" NPT male
DISS636-V4M	636 x 1/4" male face seal
DISS636-T4S	636 x 1/4" tube stub
DISS638-P4M	638 x 1/4" NPT male
DISS638-V4M	638 x 1/4" male face seal
DISS638-T4S	638 x 1/4" tube stub
DISS640-P4M	640 x 1/4" NPT male
DISS640-V4M	640 x 1/4" male face seal
DISS640-T4S	640 x 1/4" tube stub
DISS642-P4M	642 x 1/4" NPT male
DISS642-V4M	642 x 1/4" male face seal
DISS642-T4S	642 x 1/4" tube stub
DISS712-P4M	712 x 1/4" NPT male
DISS712-V4M	712 x 1/4" male face seal
DISS712-T4S	712 x 1/4" tube stub
DISS714-P4M	714 x 1/4" NPT male
DISS714-V4M	714 x 1/4" male face seal
DISS714-T4S	714 x 1/4" tube stub
DISS716-P4M	716 x 1/4" NPT male
DISS716-V4M	716 x 1/4" male face seal
DISS716-T4S	716 x 1/4" tube stub
DISS718-P4M	718 x 1/4" NPT male
DISS718-V4M	718 x 1/4" male face seal
DISS718-T4S	718 x 1/4" tube stub
DISS720-P4M	720 x 1/4" NPT male
DISS720-V4M	720 x 1/4" male face seal

DISS724-P4M	724 x 1/4" NPT male
DISS724-V4M	724 x 1/4" male face seal
DISS724-T4S	724 x 1/4" tube stub
DISS726-P4M	726 x 1/4" NPT male
DISS726-V4M	726 x 1/4" male face seal
DISS726-T4S	726 x 1/4" tube stub

INSTRUMENT GRADE PIPE FITTINGS

Pipe fittings are commonly used in constructing gas handling systems to join operating components together in a rigid configuration instead of compression fittings. They are well suited to high purity, high pressure, or high vacuum applications. All of the fittings shown below have a minimum pressure rating of 3000 psig. Some stainless steel fittings may be rated at higher operating pressures.

HOW TO ORDER

BRASS P/N	STAINLESS STEEL P/N	DESCRIPTION
-----------	---------------------	-------------

Male Hex Nipple (For connecting female pipe threads)

2-2MHN-B	2-2MHN-SS	1/8" NPT male x 1/8" NPT male
4-2MHN-B	4-2MHN-SS	1/4" NPT male x 1/8" NPT male
4-4MHN-B	4-4MHN-SS	1/4" NPT male x 1/4" NPT male
8-4MHN-B	8-4MHN-SS	1/2" NPT male x 1/4" NPT male
8-8MHN-B	8-8MHN-SS	1/2" NPT male x 1/2" NPT male

Male Hex Long Nipple (For connecting female pipe threads at extended lengths)

4-4MHLN-2.0-B	4-4MHLN-2.0-SS	1/4" NPT male x 1/4" NPT male (2" long)
4-4MHLN-2.5-B	4-4MHLN-2.5-SS	1/4" NPT male x 1/4" NPT male (2.5" long)
4-4MHLN-3.0-B	4-4MHLN-3.0-SS	1/4" NPT male x 1/4" NPT male (3.0" long)
4-4MHLN-4.0-B	4-4MHLN-4.0-SS	1/4" NPT male x 1/4" NPT male (4.0" long)

Female Hex Coupling (for connecting male pipe threads)

2-2FHC-B	2-2FHC-SS	1/8" NPT female x 1/8" NPT female
4-2FHC-B	4-2FHC-SS	1/4" NPT female x 1/8" NPT female
4-4FHC-B	4-4FHC-SS	1/4" NPT female x 1/4" NPT female
8-4FHC-B	8-4FHC-SS	1/2" NPT female x 1/4" NPT female
8-8FHC-B	8-8FHC-SS	1/2" NPT female x 1/2" NPT female

Reducing Bushing (for joining pipe threads of different sizes)

4-2RB-B	4-2RB-SS	1/4" NPT male x 1/8" NPT female
8-4RB-B	8-4RB-SS	1/2" NPT male x 1/4" NPT female

Reducing Adapter (for joining pipe threads of different sizes)

4-2RA-B	4-2RA-SS	1/4" NPT female x 1/8" NPT male
8-4RA-B	8-4RA-SS	1/2" NPT female x 1/4" NPT male

INSTRUMENT GRADE PIPE FITTINGS *CONTINUED*

HOW TO ORDER

BRASS P/N	STAINLESS STEEL P/N	DESCRIPTION
Male Elbow (for connecting female pipe threads at right angles)		
2-2ME-B	2-2MEL-SS	1/8" NPT male x 1/8" NPT male
4-4ME-B	4-4MEL-SS	1/4" NPT male x 1/4" NPT male
Female Elbow (for connecting male pipe threads at right angles)		
2-2FE-B	2-2FE-SS	1/8" NPT female x 1/8" NPT female
4-4FE-B	4-4FE-SS	1/4" NPT female x 1/4" NPT female
Street Elbow (for connecting male to female pipe threads at right angles)		
2-2SE-B	2-2SE-SS	1/8" NPT male x 1/8" NPT female
4-4SE-B	4-4SE-SS	1/4" NPT male x 1/4" NPT female
Female Tee (for connecting male pipe threads in a "T" configuration)		
2-2-2FT-B	2-2-2FT-SS	1/8" NPT female all ends
4-4-4FT-B	4-4-4FT-SS	1/4" NPT female all ends
Male Tee (for connecting male pipe threads in a "T" configuration)		
2-2-2MT-B	2-2-2MT-SS	1/8" NPT male all ends
4-4-4MT-B	4-4-4MT-SS	1/4" NPT male all ends
Street Tee (for connecting pipe threads in a "T" configuration female x male x male)		
4-4-4ST-B	4-4-4ST-SS	1/4" NPT male x 1/4" NPT female x 1/4" female
Male Branch Tee (for connecting pipe threads in a "T" configuration male x female x male)		
4-4-MBT-B	4-4-MBT-SS	1/4" NPT male x 1/4" NPT female x 1/4" female
Pipe Cross (for making a 4-way connection of male pipe threads)		
4FX-B	4FX-SS	1/4" NPT female all ends
Hollow Hex Pipe Plug (to plug a female pipe thread)		
2PHH-B	2PHH-SS	1/8" NPT male
4PHH-B	4PHH-SS	1/4" NPT male

COMPRESSION FITTINGS FOR METAL TUBING

Compression fittings are commonly used with metal tubing in constructing gas handling systems using tubing. They are particularly suited to high purity, high pressure, or high vacuum applications. They need no special tools, welding, or soldering and can be made and remade repeatedly.

Please note that the tubing size designation in the ordering information below refers to the outside diameter of the tubing. Also, only the most common fittings are listed here; many other connections are available on request.

HOW TO ORDER

BRASS P/N	STAINLESS STEEL P/N	DESCRIPTION
Male Connectors (For connecting female pipe threads to tubing)		
2MSC2N-B	2MSC2N-316	1/8" compression x 1/8" NPT male
2MSC4N-B	2MSC4N-316	1/8" compression x 1/4" NPT male
4MSC2N-B	4MSC2N-316	1/4" compression x 1/8" NPT male
4MSC4N-B	4MSC4N-316	1/4" compression x 1/4" NPT male
4MSC8N-B	4MSC8N-316	1/4" compression x 1/2" NPT male
8MSC4N-B	8MSC4N-316	1/2" compression x 1/4" NPT male
8MSC8N-B	8MSC8N-316	1/2" compression x 1/2" NPT male
Female Connectors (for connecting male pipe threads to tubing)		
2FSC2N-B	2FSC2N-316	1/8" compression x 1/8" NPT female
2FSC4N-B	2FSC4N-316	1/8" compression x 1/4" NPT female
4FSC2N-B	4FSC2N-316	1/4" compression x 1/8" NPT female
4FSC4N-B	4FSC4N-316	1/4" compression x 1/4" NPT female

2MSEL4N-B	2MSEL4N-316	1/8" compression x 1/4" NPT male
4MSEL2N-B	4MSEL2N-316	1/4" compression x 1/8" NPT male
4MSEL4N-B	4MSEL4N-316	1/4" compression x 1/4" NPT male
Female Elbow (for connecting male pipe threads to tubing at right angles)		
2FSEL2N-B	2FSEL2N-316	1/8" compression x 1/8" NPT female
2FSEL4N-B	2FSEL4N-316	1/8" compression x 1/4" NPT female
4FSEL2N-B	4FSEL2N-316	1/4" compression x 1/8" NPT female
4FSEL4N-B	4FSEL4N-316	1/4" compression x 1/4" NPT female
Union (for joining tubing)		
2SC2-B	2SC2-316	1/8" compression x 1/8" compression
4SC4-B	4SC4-316	1/4" compression x 1/4" compression
Reducing Union (for joining tubing of different sizes)		
4RU2-B	4RU2-316	1/4" compression x 1/8" compression
8RU4-B	8RU4-316	1/2" compression x 1/4" compression
Bulkhead Union (for connecting tubing through a panel or bulkhead)		
2BC2-B	2BC2-316	1/8" compression x 1/8" compression
4BC4-B	4BC4-316	1/4" compression x 1/4" compression
8BC8-B	8BC8-316	1/2" compression x 1/2" compression
Union Elbow (for joining tubing at right angles)		
2EE2-B	2EE2-316	1/8" compression x 1/8" compression
4EE4-B	4EE4-316	1/4" compression x 1/4" compression
8EE8-B	8EE8-316	1/2" compression x 1/2" compression
Union Tee (for joining tubing in "T" configurations)		
2ET2-B	2ET2-316	1/8" compression all ends
4ET4-B	4ET4-316	1/4" compression all ends
8ET8-B	8ET8-316	1/2" compression all ends

THE CONTROL AND SAFE HANDLING OF COMPRESSED GASES DVD

We have created this 118 minute video to provide you with an understanding of the basic principles of handling and controlling compressed gases and cryogenic liquids. The video is segmented into chapters so that the viewer may go to any of the primary subjects quickly without having to go through the complete presentation. This video is a “must” for any company’s training library.

DISC ONE

- Chapter 1.0 Basic Safe Handling Rules for Cylinder Gases
- Chapter 2.0 Understanding the Compressed Gas Cylinder
- Chapter 3.0 Cylinder Storage and Security
- Chapter 4.0 Cryogenic Liquids
- Chapter 5.0 Personal Protection Gas Monitoring
- Chapter 6.0 The Most Common OSHA Violations

DISC TWO

- Chapter 7.0 The Proper Selection and Use of Pressure Regulators
- Chapter 8.0 Delivery Systems
 - 8.1 Protocol Stations
 - 8.2 Changeover Manifolds
 - 8.3 Discharge Manifolds
- Chapter 9.0 All About Transfer Lines
- Chapter 10.0 Purging for Purity and Safety
- Chapter 11.0 Accessory Equipment
 - 11.1 Valves
 - 11.2 Flowmeters
 - 11.3 Flash Arrestors
 - 11.4 Low Pressure Alarms
 - 11.5 Cylinder Heaters and Warmers
 - 11.6 Cylinder Hand Trucks
 - 11.7 Purifiers and Filters
- Chapter 12.0 Application Equipment Summary

GAS SAFETY AND MATERIAL COMPATIBILITY DATA CHART

This data has been compiled from the best information available and is offered as a guide to proper material selection. The data presented are generalized for average conditions of temperature and pressure. The user should always investigate the characteristics of the gas being handled and take all the proper precautions. Our technical staff will be pleased to give free advice and technical information on any gas or chemical product of interest.

GAS	HAZARDS FOR HUMANS			MATERIALS OF CONSTRUCTION									SPECIAL CHARACTERISTICS
	Toxic	Flammable	Corrosive	Aluminum	Copper	Brass	Steel	Stainless Steel	Monel®	Kel-F®	Teflon®

GAS DATA & EQUIPMENT RECOMMENDATIONS

The following information is provided as a guide to assist you in selecting the correct gas control for use with each of your cylinder gases. The listing is divided into three distinct groups - Pure Gases, Pure Gases in Lecture Bottles, and Two-Component Gas Mixtures.

To use this guide, simply locate the gas or gas mixture you are using within the appropriate group. The tables for Pure Gases and Pure Gases in Lecture Bottles have their information initially arranged alphabetically by the gas of interest, and then secondarily alphabetized by the specific grade of that gas. The information in the Two-Component Gas Mixtures table is listed first alphabetically by minor component and then alphabetically by the balance gas, or major component. For example, 2% Ammonia, 98% Helium would be listed first under Ammonia (the minor component), then under "In Helium" (the balance gas) within the Ammonia grouping.

Across from each individual listing you will find that product's normal corresponding valve outlet connection number (CGA Connection), the recommended regulator model, and a reference page number directing you to the page in our catalog where additional information and complete specifications on that regulator can be found. In the Pure Gas Table you will also find certain physical properties of the gas, such as chemical formula, molecular weight, vapor pressure (liquefied gases), specific gravity and specific volume. In certain cases, where pressure reduction is not desired or required, such as with very low pressure products such as borontrichloride, a manual control valve has been recommended instead of a pressure regulator. Please remember that Manual Control Valves control flow, not pressure.

You should note that the recommendations contained herein are valid, and generally preferred for the more common applications of the products indicated; and consideration has been given to safety, materials compatibility, as well as to convenience and suitability for these common applications. However, the recommendations shown may not be the only models that are suitable, and your specific application may have subtleties that would indicate that a different selection is a more preferable choice. If you need assistance in making your selection, or wish to confirm that your choice is correct, please contact us.

If you are using a product that is not listed within these tables, please do not hesitate to contact us to discuss your requirements.

PURE GASES

Gas Grade	Mol. Weight	Vapor Pressure (psig at 70°F)	Specific Gravity (Air-1)	Specific Volume (ft ³ /lb. at 70°F)	CGA Connection Number	Equipment Recommendation	Page #
