NORDIC & ALPINE

COLLECTION 2024 / 2025

CHALLENGE. EVERY DAY.

tradition

We are an organization that originates from the heart of nature, based in the town of Žiri, where tradition and innovation intertwine. For decades, we have been producing footwear that carries the essence of nature and a passion for winning quality. Our brand Alpina has become synonymous with top craftsmanship, innovative solutions, and aesthetic design.

Our greatest pride is that for many years, we have been the first choice of Olympians, world champions, and World Cup winners in cross-country skiing and biathlon. Our footwear is recognized worldwide as a key element that enables athletes to achieve their best results. The high-level knowledge and quality required to meet athletes' high expectations are also evident in our wide range of sports and walking footwear.

Alpina's products are the result of skilled craftsmen who, with their expertise and dedication to shoe production, create true masterpieces. Despite the progress and modernization of production, we maintain our unwavering commitment to traditional handmade craftsmanship. Every shoe that emerges from Alpina's development process carries echoes of timeless wisdom and enduring mastery.

After 75 years of experience and success, Alpina is boldly embarking on a new path. Our new VISION, "To be a respected footwear manufacturer improving everyday life through comfort and excellence." and MISSION, "We provide people with freedom and joy of motion.", are fundamental and unwavering guiding principles. We want to win the hearts and feet of people all over the world, bringing comfort, innovation, and elegance into their lives.

At Alpina, we believe that footwear is more than just an accessory. It is a path to a better, more comfortable, and more active life. That's why we are dedicated to our mission and strive to fulfill our vision every day.

Alpina - a sense of a new era, a sense for those who appreciate quality and comfort in every step.

FEATURES

FLEX

Flex is an important factor to consider when choosing footwear, especially for downhill, cross-country, and backcountry boots. Flex refers to the amount of bend in the sole of a boot. A shoe with a high flex will be more flexible and allow for a more natural stride, while a shoe with a low flex will be more rigid and provide more support. The ideal amount of flex for a boot will depend on the activity you are using it for. The skating technique demands a stiff flex sole, while the classic technique requires soft flex sole characteristics in the shoe metatarsal area. The Skate design also employs stiff flex parts and materials. In contrast, the Classic and Combi/Duathlon type shoe designs employ soft flex parts and materials that deliver maximum power and control. Backcountry and Double poling (DP) employs a medium flex sole and components to deliver a more flexible, accommodating ski experience.

SOFT

Graceful and Forgiving

For classic skiing techniques, a soft flex sole is your ideal companion. This gentle flex offers a graceful and forgiving stride, making it easier to navigate a variety of terrains and conditions. The soft flex sole provides classic cross-country enthusiasts with comfort and precise control as they glide through the snow.

MEDIUM

Adaptable and Versatile

Backcountry adventures and double poling (DP) demand a boot with a medium flex sole and components. This adaptable and versatile choice empowers you to effortlessly switch between different skiing techniques and conquer diverse terrains. The medium flex sole ensures that you have the freedom to explore any landscape with ease.

STIFF

Solid and Powerful

In the world of skating techniques, a stiff flex sole is of the essence. The solid and powerful structure of a stiff flex sole delivers the rigidity and responsiveness needed for efficient and forceful strides on the snow. Skaters can trust this firm foundation to maximize their performance and speed.

SOFT

MEDIUM

STIFF

FIT

Alpina, a brand with a rich history of crafting exceptional footwear since 1947, understands the importance of a perfect fit. The Alpina Fit represents a harmonious blend of boot construction and meticulous attention to detail, catering to a wide range of foot shapes and sizes. Alpina provides options that guarantee a snug and comfortable fit tailored to your specific needs.

Selecting the perfect footwear is a pivotal decision, especially when it comes to cross-country, backcountry, and downhill boots. Whether you're an outdoor enthusiast, an adventurer, or a professional athlete, the fit of your boots plays a pivotal role in determining your comfort, performance, and overall safety. In this article, we explore the paramount importance of a good fit when it comes to these three categories of boots. In the world of outdoor sports, comfort is crucial. A well-fitting boot minimizes discomfort, ensuring you can enjoy your adventure to the fullest. Whether you're exploring the wilderness, skiing down the slopes, or conquering backcountry terrain, a comfortable fit allows you to focus on the experience rather than discomfort. Properly fitting boots provide essential SUPPORT.

In backcountry exploration, where the terrain can be unpredictable, robust support is critical to prevent injuries. Well-fitted boots reduce the risk of sprains, strains, and blisters, offering added security and peace of mind during your outdoor endeavors.

In the realm of skiing, POWER TRANSFER from your feet to your skis is a defining factor in your performance. A well-fitted boot ensures optimal power transfer, enabling you to efficiently convert your energy into movement. This is particularly crucial when you're speeding down the slopes or navigating challenging terrain in backcountry adventures.

RACE

It's our most performance oriented version of fit. The Race fit is our most narrow fit in the metatarsal area, which ensures a tight connection between the foot and the ski. This gives you the best platform to develop and maintain the highest speed possible while practising cross-country skiing.

DYNAMIC

The dynamic Fit gives you the same support as our Race Fit, but is more generous in terms of width in the metatarsal area. It was developed for all those looking for high performance boots but require a higher volume due to their specific feet shape.

COMFORT

When we think of the Comfort Fit we think of higher volume. It's our widest fit in the metatarsal area and is combined with materials that offer warmth and give you enough support for all of your cross-country experiences.

TECHNOLOGIES

VCP

Introducing the Volume Control Plate (VCP) designed by Alpina's engineer, strategically placed beneath the insole, enabling precise adjustment of boot volume. Recognizing that every foot is unique, the VCP allows independent customization for the left and right foot. Fine-tune the fit to your preference, ensuring optimal comfort and support. If additional space is desired, simply remove the plate to achieve greater shoe volume. Experience a truly personalized fit with our innovative Volume Control Plate, tailored to meet the diverse needs of your feet.

NON PVC

At Alpina, we prioritize sustainability. Our non-PVC cross-country boots use eco-friendly materials like recycled polyester and TPU, which are as durable as PVC but significantly kinder to the environment. By choosing these boots, you reduce your environmental impact and join our commitment to a greener future. We're proud to offer products that are good for you and the planet.

VARIO

Our high-end models feature elastic tape inserts that allow the gaiters to adapt to a variety of lower leg shapes.

VEGAN

Discover sustainable performance through Alpina's use of vegan materials. Benefit from breathability, natural antimicrobial features, and eco-friendly components incorporated into Alpina's designs, which seamlessly blend functionality and style. Opt for Alpina to embark on outdoor adventures with confidence, knowing they align with your values.

ACTIVE GRIP

At Alpina, we believe that the platform for the Skate and the Classic techniques requires different specifics in terms of the connection between your feet and the ski. For the best possible experience in the Classic technique we have found the solution that is based on decade long research and development - ACTIVE GRIP. The 10mm offset of the front metal bar part of the Alpina PRO CLASSIC sole will enable you to get more out of every kick you make. No matter what, you will enjoy classic technique more than ever with Alpina Active GRIP technology.

ACTIVE GRIP

FREE FEET TECHNOLOGY

Research and testing have shown us that feet move in a specific way while practicing cross-country skiing, and our boots can help you with that. Alpina "Free-Feet" technology virtually eliminates foot stress, providing the skier maximum comfort and performance. This is accomplished with a unique design and manufacturing process to give your feet freedom and all the support you need at any given moment.

CONSTRUCTION

We have developed many ways of making boots for different segments of cross-country skiing. The differences between World Cup competitors' and recreational users' needs and wishes are significant, so it is necessary to adapt the shoe to each segment. World Cup competitors need extreme lightness and breathability of the shoe, while back-country explorers need warmth and a high level of stability. In all the different segments throughout the manufacturing process, we use the knowledge that ultimately provides the best results to every user of our boots.

RACING ELITE The shoe is constructed with one-piece full-carbon chassis and a full-carbon cuff. All of the boots are made in SLOVENIJA. The split racing sole tip and heel are later glued to the chassis of the shoe. It has an anatomic ultra lightweight and racy inner shoe, combined with a breathable ultralight gaiter. At the end of the process, the shoe is wrapped in special TPU foil that will prevent the water from coming into the shoe but will allow a high level of breathability for top racing performance.

RACING SOLE Our PRO, Comp, and Racing line are constructed on the sole rather than chassis like Elite 3.0 line. All the boots are equipped with our in-house-made ALPINA Soles, which will give you the whole package of ALPINA performance. Outer complex materials differ from Full-carbon to TPU and are chosen to provide the best performances with similar technologies at different price points.

TOURING PRIME All TOURING shoes use Alpina Touring GLUED construction and combine Alpina or Roteffela outer soles. The specific of this glued construction is great comfort and isolation throughout everyday use while staying price-performance oriented.

BC BOOTIE PRO Full bootie construction of the boot ensures your feet are 360° surrounded with breathable waterproof materials, and isolated for cold days. In the first phase of production, the so-called sock is produced and later united with the rest of the boot components to ensure the highest level of fit and performance.

BC PRIME Sheets of meticulously selected materials are stitched together from the inside out to create the shoe's foundation. This stitched base, crafted using unique shoe manufacturing machines and skilled cobblers, serves as the canvas onto which various soles are expertly affixed.

BCPRIME

ELITE 3.0

Ultra light Carbon construction
- ultra light performance.

The world's lightest, most responsive ski boots are changing the way we ski - and win.

ESK 3.0

The single-piece all-carbon anatomic skate chassis features extremely light, 'hard' sole flex and delivers superior lateral responsiveness and maximum longitudinal stiffness and stability. Carbon cuff-to-heel counter hinge construction delivers ultralight, maximal stiffness, minimal rotational hinge friction and optimal ankle fit.

TORSIONAL STABILITY

CUFFS

Cross-country skiing demands varying levels of ankle support, depending on the technique. Skating necessitates increased lateral ankle support for optimal performance, while classic skiing benefits from more ankle joint flexibility. Combi boots are engineered for versatility, accommodating both skating and classic skiing. For skaters seeking enhanced lateral ankle support and improved responsiveness, our boots incorporate an externally riveted or screw-fixed cuff, providing rigidity and lateral stability. These cuffs are ergonomically designed, featuring a Velcro power strap and EVA padding for added comfort. Conversely, COMBI boots and those designed for double poling (DP) strike a balance in ankle support. To cater to the diverse preferences and needs of cross-country skiers, we offer two distinct upper cuff shapes. Your performance, comfort, and style are at the heart of our design.

The combi cuff shape is a bit lower, mid-cut construction, compared to the traditional skate cuff shape offering the right amount of support for different use of a shoe. It will help the skier feel stable at any given moment while giving you enough freedom for stress-free classic skiing techniques.

ALPINA COMBI

The traditional skate anatomic cuff, developed and designed for best performance, is light and delivers maximal stiffness and superior lateral responsiveness. This cuff provides the comfort and support you need for skating technique. The power strap ensures optimal ankle fit and adjustable ankle grip. EVA padding delivers superior comfort, while the power strap ensures optimal ankle fit and adjustable ankle grip.

ALPINA SKATE

**ALPINA ELITE
SKATE/DUATHLON**

Material: Full Carbon

The anatomic full carbon cuff is exceptionally light and delivers maximal stiffness and superior lateral responsiveness. EVA padding delivers superior comfort, while the power strap ensures optimal ankle fit and adjustable ankle grip.

**ALPINA PRO
SKATE/DUATHLON**

Material: Pebax and Carbon

Materials allow exterior boot construction to reduce the weight of the boot, consequently increasing the functionality and durability of the boot. The PRO Cuff is solid and durable. It ensures better torsional stability and stance position.

**ALPINA PRO
JUNIOR
SKATE/DUATHLON**

Material: TPU and Carbon

Materials allow exterior boot construction to reduce the weight of the boot, consequently increasing the functionality and durability of the boot. The PRO Cuff is solid and durable. It ensures better torsional stability and stance position.

ALPINA ELITE RS

Material: TPU and Carbon

The anatomic full carbon cuff, developed and designed for best rollerski performance is exceptionally light and delivers maximal stiffness and superior lateral responsiveness. EVA padding delivers superior comfort, while the power strap ensures optimal ankle fit and adjustable ankle grip.

ALPINA RACE

Material: TPU and Glass-Fiber

Materials allow exterior boot construction to reduce the weight of the boot, consequently increasing the functionality and durability of the boot. The RACE Cuff is solid and durable. It ensures better torsional stability and stance position.

ALPINA TEMPO

Material: TPU

Thermoplastic polyurethane (TPU) provides good stiffness and lateral stability, while the EVA padding and a power strap provide superior comfort and adjustable ankle grip.

GAITERS

Gaiters cover the shoe and lower leg entirely and protect against cold, water, moisture, and snow. Gaiters are elastic and adaptable in shoe instep to different foot shapes. On the one hand, gaiters are water-tight but, on the other hand, also breathable in the instep area of the shoe.

ALPINA ELITE GAITER

Material: Polyester and TPU foil

Ultralight thin-layer elastic Polyester-made gaiters combine breathability and water tightness. It improves the lightness of the shoe. The inside side is equipped with thin PU foil to prevent water and moisture penetration and absorption, while the instep area is free of any foil to ensure breathability. Gaiters are equipped with elastic tape for gaiter adaptability to various lower leg shapes.

ALPINA PULSE GAITER

Material: PVC and Neoprene

Made out of PVC, it enables strength, lightweight, elasticity, and high durability, while NEOPRENE maintains good flexibility over a wide temperature range and offers good insulation against both wet and cold.

ALPINA 4DRY

4DRY stands for an innovative system made from bi-elastic PES textile material laminated with a membrane that allows the boot water impermeable and allows it to breathe. The material feels light and is hydrophobic, whisking away water and moisture to maximize comfort and ensure a dry and warm foot.

MEMBRANES

Alpina membranes are designed to keep your feet dry, warm, and comfortable in any weather condition. Whether you're skiing through deep powder or skating on groomed trails, Alpina membranes will help you stay protected from the elements. They are also lightweight and durable. This makes them a good choice for winter cross- and back-country boots, as they won't add too much weight to your boots and they will last for many seasons.

ALPITEX MEMBRANE

Material: PU Membrane

The Alpitex membrane provides additional protection against water and moisture, which increases comfort, even in more extreme weather conditions.

THINSULATE INSULATION

"Thinsulate" insulation provides up to twice as much thermal shoe insulation. It provides the foot maximum thermal comfort even under icy and high-humidity conditions.

ALPINA IGLOO

Material: Felt

Advanced use of insulation provides the foot with maximum thermal comfort.

LACING

Alpina offers two unique lacing systems for cross-country and backcountry boots: Diamond Lacing and Prime Lacing. Both systems are designed to improve torsional stability and power transfer, but they have slightly different characteristics. Alpina Diamond Lacing and Prime Lacing are two unique lacing systems that offer improved torsional stability and power transfer for cross-country and backcountry boots. The best lacing system for you will depend on your individual needs and preferences.

ALPINA DIAMOND LACING

A braid angle of 45° relative to the longitudinal direction of the shoe improves the torsional stability of the soft part of the shoe. This ensures a tight fit between the shoe and the foot in the rotation phase of the shoe toward the inner side when skiing the skating technique. It also improves the torsional stability of the overall shoe and helps deliver power to the user.

ALPINA PRIME LACING

A braid angle of 90° relative to the longitudinal direction of the shoe provides maximum grip in the instep and ensures a tight fit between the boot and the heel when skiing the classical technique.

HEEL COUNTERS

The heel counter is a critical component of cross-country and backcountry boots. It provides support for the heel and ankle, and helps to keep the foot in place during skiing. Alpina's FREE-FEET construction is a unique design that provides a more natural fit and feel, and helps to improve torsional stability, which is the ability of the boot to resist twisting. This is important for skiers who need to transfer power efficiently to their skis. They also provide support for the heel and ankle, which can help to prevent injuries and help to keep the foot in place inside the boot, which improves control and performance.

ALPINA ELITE SKATE CHASSIES

Material: Full Carbon

The Elite SKATE chassies is a single piece carbon construction which combines the sole and heel counter of the boot. It is the best technology Alpina has to offer in cross-country boots. It is a key component of the lightest cross-country boot in the World Cup. Although it is incredibly lightweight, it provides excellent torsional stability and support which helps to improve power transfer and reduce the risk of injuries. The Elite SKATE chassies also features "FREE-FEET" construction, which reduces heel pressure and adapts to various types of heel and foot shapes.

ALPINA ELITE CLASSIC CHASSIES

Material: Full Carbon

The Elite SKATE chassies is a single piece carbon construction which combines the sole and heel counter of the boot. It is the best technology Alpina has to offer in cross-country boots. It is a key component of the lightest cross-country boot in the World Cup. Although it is incredibly lightweight, it provides excellent torsional stability and support which helps to improve power transfer and reduce the risk of injuries. The Elite SKATE chassies also features "FREE-FEET" construction, which reduces heel pressure and adapts to various types of heel and foot shapes.

ALPINA PRO SKATE

Material: Carbon

The PRO SKATE heel counter is completely made out of carbon, incredibly lightweight, it provides excellent torsional stability and support which helps to improve power transfer and reduce the risk of injuries. The PRO SKATE heel counter also features "FREE-FEET" construction, which reduces heel pressure and adapts to various types of heel and foot shapes.

ALPINA PRO CLASSIC

Material: Carbon and TPU

The combination of Carbon fiber particles and TPU build the exterior boot construction to reduce the weight of the boot, consequently increasing functionality and durability. The injected carbon heel counter is solid and durable. It ensures better torsional stability and stance position. 'Free heel' provides a good grip for any heel or foot shape.

ALPINA COMP SKATE

Material: Carbon and Pebax

Reaching for the best and lightest, but wishing to be more accessible for a wider range of consumers COMPETITION SKATE heel counter combines Carbon fibers and PEBAX. It still offers light weight construction, and gives you high performance, functionality and durability. The injected carbon heel counter is solid and durable. It ensures better torsional stability and stance position. 'Free heel' provides a good grip for any heel or foot shape.

ALPINA COMP CLASSIC

Material: TPU

Premium thermoplastic polyurethane heel counter, with high level of stiffness and low weight provides a good grip and a stable foothold in the heel. 'Free heel' construction adapts to the various foot shapes and heel volumes.

ALPINA RACE SKATE/CLASSIC

Material: TPU and Glass-Fiber

Premium thermoplastic polyurethane heel counter with glass-fibre, with high level of stiffness and low weight provides a good grip and a stable foothold in the heel. 'Free heel' construction adapts to the various foot shapes and heel volumes.

ALPINA TEMPO SKATE/COMBI

Material: TPU

Thermoplastic polyurethane heel counter provides a good grip and a stable foothold in the heel.

ALPINA THERMO MOLDED BC

Premium thermo-molded material strategically integrated into the heel and ankle areas of the boot's structure. This innovation is designed to significantly bolster core stability, ensuring your confidence and support on challenging terrains.

ALPINA THERMO MOLDED

Material incorporated within the heel section of the boot's construction to enhance fundamental stability.

FOOTBED

Footbeds are vital for both cross country and backcountry activities. They optimize the foot-chassis connection, enhancing stability, comfort, and performance

ALPINA ORTHOLITE

Alpina OrthoLite® insole technology creates a thermal barrier that elevates footwear temperature regulation to an unprecedented level, infusing open-cell PU foam with a proprietary aerogel creating the lightest, most advanced version of the world's most insulative material delivering unmatched thermal insulation and all-day comfort and cold weather protection underfoot.

ALPINA COMP

Introducing the ALPINA COMP footbed, engineered to elevate your outdoor experiences. Crafted with precision, this footbed features open-cell PU foam, which not only provides exceptional cushioning but also enhances breathability, ensuring your feet stay fresh throughout your adventures. The advanced insulation technology in the ALPINA COMP footbed offers reliable protection from the elements, keeping your feet warm in cold weather.

ALPINA TOUR

Anatomic insole contributes significantly to the vertical stability of the foot, providing a high level of comfort and improving the thermal insulation of the shoe, and keeping your feet dry.

MIDSOLES

With midsoles, we are defining the shoe's flex, feel and power characteristics. Midsoles give you the power to reach the speed while staying stable. They can give you the extra feel when running classic technique in challenging snow conditions or the power while sprinting for first place. Various materials and shapes of midsoles are used to find the perfect characteristics we are looking for in every shoe.

| | MATERIAL | STIFFNES | WEIGHT |
|--------------------------|--|------------|-------------------|
| ALPINA ELITE SKATE | Carbon and PEBAX (World cup Technology) | HARD | ULTRA LIGHTWEIGHT |
| ALPINA ELITE CLASSIC | TPO (World cup Technology) | SOFT | ULTRA LIGHTWEIGHT |

| ALPINA TEMPO CLASSIC | TPO | SOFT | LIGHTWEIGHT |
| ALPINA JR TOURING | TPO | ULTRA SOFT | LIGHTWEIGHT |
| ALPINA JR RACING SKATE | TPO | MEDIUM | LIGHTWEIGHT |
| ALPINA JR RACING CLASSIC | TPO | SOFT | LIGHTWEIGHT |

OUTSOLES

Outsole type and construction are chosen individually for each boot based on its features and functional requirements. We have used years of experience and knowledge from our R&D department and years of collaboration with World cup athletes to develop Alpina outsoles for both Skate and Classic techniques with specific characteristics. We are happy to choose the best options for every shoe.

- ALPINA ELITE CLASSIC CHASSIS** **With integrated split Classic sole**
Material Chassis: Full Carbon
Material Sole: TPU
Extremely light anatomic and ergonomic single-piece carbon-made soft, pliable sole flex chassis construction with directly integrated NNN compatible Classic toe & heel plate. The chassis construction provides maximum longitudinal stability, superior responsiveness, and power transmission by the foot to the ski, with "FREE-FEET" & adaptable heel pocket construction for minimum heel stress and optimal foot fit.
- ALPINA ELITE SKATE ONE-PIECE FULL CARBON** **With integrated split Skate sole**
Material Chassis: Full Carbon
Material Sole: TPU
Extremely light anatomic and ergonomic single-piece carbon-made stiff sole flex chassis construction with integrated NNN compatible Skate toe & heel plate. The chassis provides maximum longitudinal stiffness and lateral stability, superior lateral responsiveness, and power transmission by foot to the ski, with "FREE-FEET" & adaptable heel pocket construction for minimum heel stress and for optimal foot and ankle fit.
- ALPINA PRO CLASSIC** **Material: Carbon + Pebax insert and TPU**
New Special-made outsole for classic technique. The pivot point, NNN compatible, moved for 10 mm to the front direction for better and more efficient thrust. Improved ski-to-snow contact. Thin layer design for the lightness of the sole; with low cut heel cleats construction and 90-degree oriented front cleats design for optimal sole, soft flex characteristic.
- ALPINA PRO SKATE** **Material: Carbon + Pebax insert and TPU**
New Special-made outsole for skate running technique. A thin layer design offers the lightness of the sole, with high cut heel cleats construction and 45-degree oriented front cleats design for optimal sole stiff flex characteristic. The pivot point, NNN compatible, slightly moved to the back directly under the big toe to support a more efficient and decisive thrust.
- ALPINA PULSE** **Material: TPU**
Pulse soles are made to match NNN binding system. Provides good stability and stance position both on skate and classic style boots.
- ROTEFELLA T4** **Material: TPU**
T4 sole offers good power transmission, comfortable, softer flex, and good walkability.
- BC XPLORE** **Material: TPU and Rubber Sole**
The Rottefella Xplore™ Backcountry sole is anti-skid, flexible, and stable. The rotation point is moved backward as close to the foot as possible for better mobility and comfort, giving a more natural walking feeling.
- ROTEFELLA BC** **Material: TPU**
Backcountry NNN compatible sole with optimum support in rugged terrain; reliable walking thanks to non-slip profile.
- 75 MM** **Material: TPU**
Standard 75 mm sole; provides excellent support in rugged terrain; non-slip profile with specially made rubber mixture. Tourer free 75 and Alaska 75 use Vibram brand soles.

reddot winner 2023

PRO line

JURY STATEMENT: The Alпина PRO cross-country ski boot satisfies the requirements for perfect fit, stability and lightness while incorporating design elements that ensure a high recognition value," concluded the jury. In order to optimize the support functions and give the athlete the best possible control, an innovative carbon material was used in the heel and ankle area, and the shoe was ergonomically shaped to follow the contour of the leg. The gaiter is both a design and functional element: it is waterproof, and breathable and features eye-catching graphics that make the shoe recognisable from a distance.

POLES

EVOLUTION CLICK STRAP

Adjustable wide wrist strap offers great support in the wrist area and helps you to use all your upper body for moving forward.

XC COMFORT STRAP

Biathlon style, with easy adjustable loop.

TEXTILE STRAP

Strong adjustable strap is comfortable and enables weight distribution around the whole wrist.

CORK GRIP

Ergonomic cork grip is made of natural materials which enables better warmth generation and an optimal grip.

PE GRIP

Dual material ergonomic grip with soft foam for greater warmth.

ALUMINIUM 7075

Our shafts, made of aircraft quality Aluminium alloy 7075, are strengthened and tempered, to maximize the quality and improve the durability.

3K CARBON FIBER

Carbon fibres give the poles a classic carbon look. The extreme lightness and optimal stiffness of the poles are the characteristics everyone is looking for.

ALUMINIUM 5083

Our shafts Aluminium alloy 5083 are produced in Italy and each tube is checked by our robots and our technicians to ensure the highest possible quality.

CARBIDE TIP

Carbide tip ensures optimal long term performance.

STEEL TIP

Steel tip ensures durability.

XC TOURING BASKET

Good support and grip on and off the tracks.

XC BC BASKET

Greater impact surface for deep snow, equipped with a durable carbide tip for better grip in icy conditions.

Our revolutionary C³ technology, the Complete Control Cuff, sets ALPINA apart as the world's first and only ski boot producer that has developed a system that allows women to adjust calf volume in a mere 5 seconds, without the need for any tools. While competitors offer limited adjustments with so-called spoilers, C³ technology stands out by providing an anatomical adjustment from the ankle area to the top of the boot for complete control over your comfort and volume.

TECHNOLOGIES + INNOVATIONS

C³

Our revolutionary C³ technology, the Complete Control Cuff, sets ALPINA apart as the world's first and only ski boot producer that has developed a system that allows women to adjust calf volume in a mere 5 seconds, without the need for any tools. While competitors offer limited adjustments with so-called spoilers, C³ technology stands out by providing an anatomical adjustment from the ankle area to the top of the boot for complete control over your comfort and volume.

INTEMP

Alpina's unique fully-integrated InTemp heating system keeps your feet comfortably warm at all times, but never overheated.

GRIPWALK

Designed with superior materials and a pronounced profile, the ergonomic sole holds a perfect grip on any slippery surface.

VCP

Introducing the Volume Control Plate (VCP) designed by Alpina's engineer, strategically placed beneath the insole, enabling precise adjustment of boot volume. Recognizing that every foot is unique, the VCP allows independent customization for the left and right foot. Fine-tune the fit to your preference, ensuring optimal comfort and support. If additional space is desired, simply remove the plate to achieve greater shoe volume. Experience a truly personalized fit with our innovative Volume Control Plate, tailored to meet the diverse needs of your feet.

NON PVC

At Alpina, we take our natural responsibility seriously. We are committed to developing sustainable products that minimize our impact on the environment. That's why we have developed a range of non-PVC cross-country boots that are made with more eco-friendly materials. PVC, or polyvinyl chloride, is a synthetic material that is commonly used in a wide range of products, including shoes. However, PVC is also a non-biodegradable material that can take hundreds of years to decompose. In addition, PVC production can release harmful chemicals into the environment. Our non-PVC cross-country boots are made with more sustainable materials, such as recycled polyester and TPU (thermoplastic polyurethane). These materials are just as durable and high-performing as PVC, but they are also much more environmentally friendly. By choosing our non-PVC cross-country boots, you can help to reduce your environmental impact and support our commitment to sustainability. We are proud to offer products that are good for your feet and good for the planet.

CANTING

The best skiers demand the perfect stance. Adjustable canting allows for the lateral alignment of the boot to be adapted to individual preferences, which enables the skier to develop perfect technique.

EASY ENTRY

Both the specially designed construction of the instep and the innovative Easy Entry system make boots simple to get on/off quickly and easily.

XFRAME

A rigid, lightweight structural frame connects the four main stress points and is reinforced on the most demanding axes, ensuring maximum strength and rigidity while reducing weight.

CHARGING

The boot's charging input is small, discrete, easily accessed and weather-proofed. Smart and simple – no need to disassemble the boot to charge.

BATTERY

Batteries are fully integrated inside the boot, and also easily changeable.

SMART CONTROL

Ready to use with the simple push of a button, the system runs at full-power for initial warm-up, then automatically returns to normal power, so feet are optimally warmed but never overheated.

InTemp

We bid farewell to the cold days on the slope. The new InTemp heating technology ensures a warm embrace of the foot at a push of a button. Its easy access, smart charge, and discrete design will surely leave a comfortable and warm impression.
