

# U profile / UP

## Legend:

B - height  
A - width  
t - thickness

## Notes:

\* The weight of each profile is calculated by measuring its cross sectional area and multiplying it by the material density. The aluminium density is considered to be 2.70 gr/cm<sup>3</sup>.

\*\* Alloy and length is subject to customer's request.

\*\*\* Radiuses less than 1 mm are not stated.

Product code	B (mm)	A (mm)	t (mm)	Area (mm <sup>2</sup> )	Weight (kg/m)
