What is space?

Space is the big black sky above the world. It is past the clouds and past the moon. In space, there is no air. There is no water. There is no life. It is very cold and very dark.

Why go to space?

People go to space to learn more about the stars, the moon, and other worlds. They also go to find out how space can help us on Earth.

What is a rocket?

A rocket is a big machine. It can go very fast. It helps people go into space. A rocket can go up from the ground and move away from the Earth.

What is an astronaut?

An astronaut is a person who goes into space. They wear a space suit. They must learn how to live and work in space.

What do astronauts do in space?

Astronauts do jobs in space. They fix things. They look at stars. They take notes. They learn what happens to the body in space.

Living in space

In space, you cannot walk. You float. You sleep in a bag. You eat from a box or a bag. You must drink water from a pack.

What is the Space Station?

The space station is a big place in space. It is like a home for astronauts. They can live there for many days. They can look at Earth from far away.

What can you see in space?

In space, you can see stars. You can see the moon. You can see other worlds. You can look back and see Earth.

What is gravity?

Gravity is what keeps us on the ground. In space, there is no gravity. That is why you float. Astronauts must hold on to things.

How do you get back to Earth?

To come back, the rocket must turn and fall to Earth. It goes very fast. It gets hot. Then a big parachute opens. It helps the rocket land.

What have we learnt?

We have learnt about stars and other worlds. We know more about how people can live in space. One day, we may go to live on another world.

Will you go to space?

One day, you may go to space. You may fly past the stars. You may walk on the moon. First, you must learn and read. That is how the journey starts.

Quiz: Space Travel

What is space like?

Why do people go to space?

What does a rocket do?

What is the job of an astronaut?

How do people move in space?

What do astronauts eat in space?

What is the space station?

What can you see from space?

What is gravity?

How do astronauts get back to Earth?
