HORSE / CAMEL POOLS / HYDROTHERAPY UNITS

Water has now been recognized as offering the same therapeutic values for animals as for humans. Equine therapy pools provide rehabilitation and ongoing fitness of high quality racehorses. For similar reasons, even domestic animals are now referred to these facilities by veterinary surgeons. Swimming is excellent general fitness training for all disciplines. Swimming improves stamina, circulation, flexibility and muscle tone without the risk of impact injuries to legs or joints when training on land.

The buoyancy of the water allows limbs to move freely without having to support any body weight and without concussion from hitting the ground. Because swimming improves cardiovascular fitness, horses are better able to deal with the rigours of training and less likely to become injured.

Waves Trading & Contracting W.L.L has been designing and building swimming pools since 1980 in the Middle East and Equine pools since the early 1990s. Our extensive experience in this field allows us to offer the highest possible standard in the design and construction of equine pool complexes.

Our team of dedicated in-house professionals offer you the best possible solutions for the design and construction of such facilities incorporating all your requirements as trainers and owners.

In addition to equine pools we are also able to offer you turnkey solutions for

- Underwater treadmills and equine spas
- Pools for camels and other racing animals
- Veterinary hydrotherapy units

As our In-house team of specialized engineers and construction professionals is experienced in conventional construction in addition to the construction and installation of the pool and spa, we are able to offer you a one-stop solution to all your Equine pool complex needs including enclosures and shade systems.

SEAMLESS LIQUID APPLIED EQUESTRAIN FLOORING SYSTEM

Seamless liquid rubber flooring for internal and external stable area with matching skirting's or wall mats - sealed & unsealed - Poured as a cold wet mixture these equine systems are, the best performing equestrian flooring products on the market today. The sealed system is the most hygienic stable surfacing available in the market as the sealed surface does not allow urine and other fluids to pass through the surface therefore inhibiting any biological growth within the surface. The surface is engineered to be highly resistant to abrasion and impact and still offers the resilience for the comfort of the horses.

The versatility and installation methods used in these products make the surface

- Shock absorbing - Provides greater cushioning effect than vulcanized rubber stable mats whilst offering high resistance to damages due to pawing/ box walkers
- Anti-slip, durable, attractive, self-colored and fade resistant
- Hygienic and easy to clean. Makes your stable healthier for you and your horse
- Allows the surface to be installed around difficult floor fixings and to follow the fall and/or natural contour of the installed subsurface.
- Cut bedding costs and disposal. Reduce stable maintenance and dust
- Secure natural footing reduces leg fatigue and maintains your horse's safety, health and comfort

Since 1996 when Waves Trading & Contracting W.L.L started supplying and installing these stable flooring system, over 500,000 m2 of this flooring has been installed by WTC in this region.

Applications

- Horse stalls, stable corridors and external areas
- Equine clinics and hospitals
- Paddocks and saddling enclosures
- Winners circles
- Golf course walkways
- Dog kennels, dairies, camel pens, other animal enclosures

EVA MATS FOR IMPACT PROTECTION

EVA is a very durable, synthetic material, which is ideally suited for stable walls. It absorbs impact to protect both horse and wall. Their unrivalled insulation properties provide a warm stable in winter and a cool stable in summer. Their thickness (25mm) ensures a progressive, effective compression that cushions the full impact of a forceful kick with no injury to the horse whilst their softness eliminates abrasions.

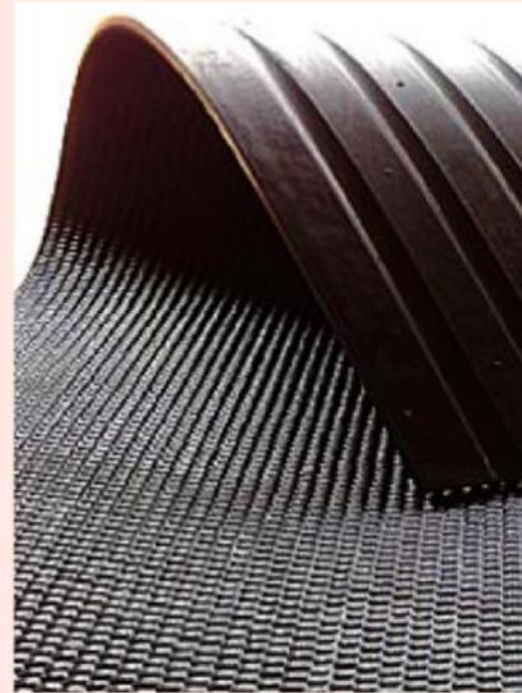

These mats transform dark, gloomy stables. Their softness both discourages crib biting and provides a slight grip for a cast horse, usually enough to enable it to roll over. Dirt comes away easily if washed down with warm water; pressure washing will not harm them.

Applications

- As wall matting to stable stalls, foaling boxes, recovery areas, horse box and trailers
- As impact protection against concrete or masonry walls, etc in tennis courts, basketball courts, sports arenas, etc.
- Flooring to indoor kids play areas
- Exercise areas
- Martial arts studios
- Yoga, pilates areas & aerobics area
- Multi-purpose rooms

STABLE & DAIRY MATS

Stable/ dairy mats offer a viable cost effective alternative to the more traditional types of stable bedding. A rubber surface will pay for its self in around 12 months saving you money, time and effort. Your horse will benefit from increased insulation, injury protection, cushioning and reduced shoe wear. Rubber surfaces are beneficial in injury recovery, protection and reducing joint fatigue in animals travelling long or short distances. Although these can be used within horse stalls also these are best suited for external areas, walkways, wash bays and as trailer mats.

These stable mats

- Cut bedding costs and disposal
- Reduce stable maintenance and dust
- Secure natural footing reduces leg fatigue and maintains your horse's safety, health and comfort
- Easily installed over any surface
- Helps to prevent and treat thrush and laminitis
- Eliminate urine pits and holes

Applications

- Stable walkways
- Wash bays
- Horse | animal transporters
- Equine pools
- Horse walkers
- Horse paths
- Winners circles
- Dog kennels, dairies, camel pens, other animal enclosures

RUBBER PAVERS

Rubber Pavers - virtually maintenance free, the dog bone shaped interlocking pavers are particularly suited for the equestrian locations where they promote the well being of your horse by providing a comfortable, non-slip surface on which your horses feel more calm, secure, relaxed and confident. You'll benefit from the soft cushion underfoot, the decreased clean-up time, the improved acoustics, and the beauty that our rubber interlocking pavers add to your barn.

Due to the porous nature these are best suited for external areas, walkways and wash bays. Rubber pavers are elastic and flexible, which means they protect hooves, tendons and joints in equal measure. They help the hoof structure to stay in good condition and leads to improved circulation as well as less frequent occurrence of lameness: Horses feel happy and stay healthy!

Cleaning the floor is also uncomplicated- just spray it with water and/or sweep it with a brush.

Applications

- Stable walkways/ Horse paths
- Entrances to riding areas
- Entrances to paddocks
- Hitching rails, washing bays
- Around Equine pools
- Horse walkers
- Winners circles
- Weight rooms, industrial or restaurant working areas - even garages, workshops and recreational areas.

RAILS & FENCES

Waves Trading & Contracting W.L.L represents Barriers International in the UAE and Middle East. We design and install a wide range of rails, fences and barriers for the equine, racing and sports industry. Our products are made from high-grade uPVC which are weather resistant impact absorbing and durable. Metal component are made to the highest standards.

We supply and install rails and fences for

- Standard course running
- Parade rings
- All weather gallops
- Tracks combining trotting, flat or jump racing
- Horse and pedestrian walkways
- Paddocks
- Training tracks
- Camel racing
- Greyhound racing
- Athletic track curbs
- Crowd barriers | segregation
- Football, rugby and hockey pitches

uPVC rails and fences will never need painting and is virtually maintenance free, allowing you to enjoy its stunning appearance year after year. PVC is impervious to weather, thus it will never chip, fade, crack or rot. The fences from uPVC provide a safe form of containment for your animals that will not break or splinter when hit. It is a flexible post and rail system that absorbs impact reducing the risk of serious injury to your horse or other stock.

Should the client have a specific requirement fences can be electrified and we are also able to offer options in HDPE & timber for fencing and in steel for race rails.

RIDING ARENA FOOTINGS

Waves trading & Contracting W.L.L offers a wide selection of riding arena footings suitable for indoor and outdoor arenas to suit your needs and budgets. The basic ingredient of all riding arena footings is sand which is mixed with various other elements to give it the property that you desire.

A good riding arena surface should be:

- Well drained - An otherwise good arena that does not drain properly is going to fail.
- Of the right softness/ hardness - a very hard or soft arena is invariably going to cause injury or stress.

Our aim is to provide the customer with a wide range of natural and synthetic surfaces, specially designed for all weather riding. For leisure or professional/ commercial applications, for surface only or full construction, we can provide a cost effective, quality surface suitable for your requirements and budget.

We are able to offer the following different options for your riding arena surface:

- Rubber crumb I sand mixtures
- Polymer /sand mixtures
- Sand and wax mixtures
- Polythene composite fibers, silica sand and vaselin mixtures
- Emulsion coated selective blended plastic granules
- Sand, rubber & fiber mixtures
- PVC granules for sand top up

TRACKS SURFACES

We supply and install environmentally friendly, non- toxic, non-hazardous track surfaces to provide you with a ideal advanced synthetic, low maintenance track surface. Our synthetic track surfaces are consistently homogeneous throughout their length, width and depth.

Our track surfaces are designed to

- maintain a high degree of integral cohesion without the need for watering
- have elastic deformation & recovery which renders maximum grip and shock absorption.
- ensure minimum kickback
- be ideal for both indoor and outdoor conditions.

Our surfaces outperform sand and dirt tracks. The surface assists in superior hoof grip, promoting faster take-off and traction control, even through the tightest bends and climatic conditions. The surface once installed requires minimum routine maintenance.

Replenishment of ingredients is required at scheduled intervals. Maintenance is simple and can be carried out by your own personnel. We are also able to offer you post installation maintenance as and when required.
