Reversible handing	✓	✓	✓

## Why Choose a RapidReset Gate Lock?

### 1 Effortless Code Changes

Traditional code locks often require removal from the gate to change the entry code. The RapidReset makes code changes faster and easier, allowing you to update the code in just 10 seconds. This quick and straightforward method ensures your security can adapt swiftly to changing needs.

### 3 No Batteries or Wiring

Operating entirely mechanically, RapidReset eliminates the need for batteries or external power. This not only reduces maintenance but also ensures reliable performance in any environment, providing peace of mind that security does not depend on power.

### 5 Easy Daily Operation

The Superlock features an easy-to-operate handle and auto-latching mechanism—simply close the gate, and it latches securely. Access is granted by entering the code and turning the handle for dependable daily operation.

### 2 Daytime Mode

The RapidReset features a Daytime Mode, allowing the code to be cleared during the day so the lock functions as a simple handle and latch. This makes it ideal for locations with frequent access, such as sports courts and workplaces. When it comes to securing the site, a new code can be set in seconds without hassle.

### 4 Built Tough for Outdoor Use

Built to withstand the elements and resist corrosion, GateMaster locks are designed for outdoor use. The adjustable and removable latchbolt enhances its adaptability to various gate styles, ensuring a secure fit and long-lasting durability.

### 6 Fast Bolt-On Installation

Just drill three holes and bolt the lock on in minutes. No welding, no specialist fabrication, and less time on site. That means faster installs and less hassle getting the gate finished and secured.

## Where RapidReset Fits Best

RapidReset is built for gates with changing users and regular code updates. Quick and easy code changes can be made in just 10 seconds. It's ideal for shared access points where different users require a secure but temporary entry.

### Holiday Lets

Easily update the gate code between guests without needing to replace keys or locks.

### Staff-Only Access Areas

Limit access to staff-only areas with code changes that are quick and easy when employees join, leave, or shifts change.

### Worksite Access

Adjust codes quickly for contractors and employees, ensuring security as access needs change.

### Sports Courts & Facilities

Update codes quickly to keep access flexible for users while helping prevent unauthorised entry.

### Schools & Campus Access

Modify access codes at the start of new terms or after staff changes.

### Shared Residential Gates

Allow residents to update entry codes periodically for added security without complex procedures.

RapidReset was developed for gates where access needs change often and code updates need to be fast, simple, and secure, all without the need for power or complex installation.

## Built for gates with shared access, changing users, and regular code updates.

RapidReset is designed for gates where access needs change often and resetting codes needs to be quick, simple, and secure. Instead of removing the lock to make changes, users can update the code directly on the gate in seconds. This makes RapidReset a practical solution for properties and facilities that need reliable access control without added hassle.

### Common Access Challenges

Many shared-access gates face the same day-to-day problems:

- Codes need to be changed regularly as staff, tenants, guests, or contractors change.
- Traditional mechanical code locks may need to be removed from the gate for code changes, adding time and hassle.
- Some sites need free access during busy hours, then secure access again later.
- Shared or outdated codes can create unnecessary security risks.

### Case Study: Faster Code Changes for a Shared-Access Gate

One early RapidReset installation came from a shared-access property already using a Gatemaster Superlock.

The site needed a faster way to change codes and an easier way to allow free access during busy periods.

By upgrading to RapidReset, the property was able to simplify daily access management, and avoid removing the lock to reset access.

Because it was replacing an existing Superlock, the upgrade was straightforward and required no gate modifications.

### Why RapidReset Helps

RapidReset is built to make gate access easier to manage in real-world use.

- Change codes in seconds directly on the lock.
- No lock removal required for code updates.
- Daytime mode allows free access during high-use periods.
- Mechanical operation means no batteries, wiring, or external power.
- Built for outdoor use and dependable daily operation.

Founded in 1995, Gatemaster is the leading UK manufacturer of gate locks, closers and hardware for metal and wood gates.

**Helpful Support**

Expert advice from a team that understands gate hardware.

**Built for Outdoor Use**
