WE OFFER A FULL CONSULTING, 3D SCANNING AND ENGINEERING SERVICE

Projects and the associated challenges often require custom solutions, we take pride in our CDEC system. Consultation, Design, Engineering and Construction is our holistic approach to solution development making maintenance on-site safe, efficient and easy.

CDEC PROCESS

CONSULTATION We come to you and visit your site to get a hands-on feel for your project. The aim of our consultation is to listen to and understand your requirements. If the project requires it, our 3D scanning capabilities will streamline measurement and data capture. This approach allows us to develop and discuss with you on-site, possible solutions to your problem, and the benefits we can offer.

DESIGN After the consultation we go back to our design team to begin the development of your custom solution. Our team produce designs in CAD Design complete with all drafting documentation ensuring an advanced manufacturing process. Our process allows and encourages you to be involved in the design stage and collaborate with our highly skilled team.

ENGINEERING Once the design is approved, we begin the development and engineering process. This ensures that the right material is used for your project to guarantee structural and functional integrity. We provide full certification that includes WLL, load ratings, integrity reports as well as certificate plates and identifications. We design and engineer all our solutions to ensure full compliance to ensure full compliance with Australian standards.

CONSTRUCTION Finally, once the project is ready and certified for construction, we manufacture your solution. We test, machine, fabricate and surface treat as well as trial fit your custom project. We only manufacture high quality products that provide long lasting, safe and efficient solutions.

Our long-standing relationships, expertise and dynamic team of solutions engineers has enabled us to provide certified efficiencies across a range of fixed plant scenarios. We understand that fixed plant maintenance requires safety, speed, accuracy and reliable execution to achieve operational efficiency. This has led us to develop a range of solutions designed and engineered to satisfy these very requirements.

The ability to 3D scan, process, design, engineer and fabricate means we can solve your on-site problems. Ensuring certification and compliance is at the forefront of every product or service and understanding that some situations require customisation; we are trusted partners in safety, efficiency and productivity.

FIXED PLANT DESIGN, ENGINEERING AND FABRICATION

Although we have a comprehensive range of standard products which we have developed over an extended period of partnerships between planning, site personnel, management and ourselves. Most of these solutions started out as a specific problem which required us to develop a solution that enabled the actions required for operational efficiency.

OUR APPROACH MEANS YOUR PROBLEMS ARE IN THE HANDS OF THOSE THAT SOLVE THEM.

- COMFORT** We take ownership of our role in operational efficiency with a system that provides a holistic solution.
- CERTAINTY** Being available, mobile and equipped to provide on-site consultations and scanning to ensure drawings, scopes of works and solutions are correct is invaluable.
- CONTROL** Design and engineering capabilities are crucial to providing certified and compliant solutions. We enable control over the situation.
- MOTION** Enabling processes and production to continue on-time is a crucial. We provide reliable, consistent pathways towards this goal.
- IMPACT** Solutions that are executed on-time consistently leaves an impact on the bottom line. Productivity receives a boost which is compounded by the benefits of the efficient use of resources which are freed up due to efficient solution development.

If you have a problem on-site, get in contact with the team and we will provide you with the certified salutation that you need.

ACCESS AND INSPECTION DOORS

THE THREE-LEVEL SAFETY SYSTEM FOR CHUTE DOORS

A three-level safety access system protects staff and keeps operations up and running. This system consists of three parts: the outer door, the second door and a cross bar protection system on the inside of the doors to prevent the door from being opened without a tool.

1st level of safety

The inside of the outer door is fitted with a rubber seal to reduce noise, vibration and dust from escaping the chute. When an operator opens this outer door, the operator is able to view the internal mechanisms of the chute but cannot access the chute due to the second door.

2nd level of safety

The second door is similar to a jail bar door which gives operators the ability to view the areas of hazard or concern without allowing them the ability to access the chute. A fixed bolt system included for additional protection and to prevent the door from being opened without a tool. The operator could now perform routine inspection or maintenance tasks without the risk associated with having free access to the chute when no second door is fitted.

3rd level of safety

The third level of protection is a cross bar protection system on the inside of the doors, to prevent any personnel accessing the chute. This final fail safe mechanism is the last line of a very good defence against workplace accidents involving chute doors.
