

Enhanced Transit Operation

Hikvision's smart bus solution enhances operational efficiency and service quality for bus operators.

01/ People Counting

Accurate Passenger Counting

Tracks the number of passengers boarding, alighting, and remaining on the bus, while filtering out children and passengers carrying items, etc.

Data Synchronization and Statistics

Syncs data on routes, stops, and schedules from third-party systems, and supports the display and export of passenger flow statistics.

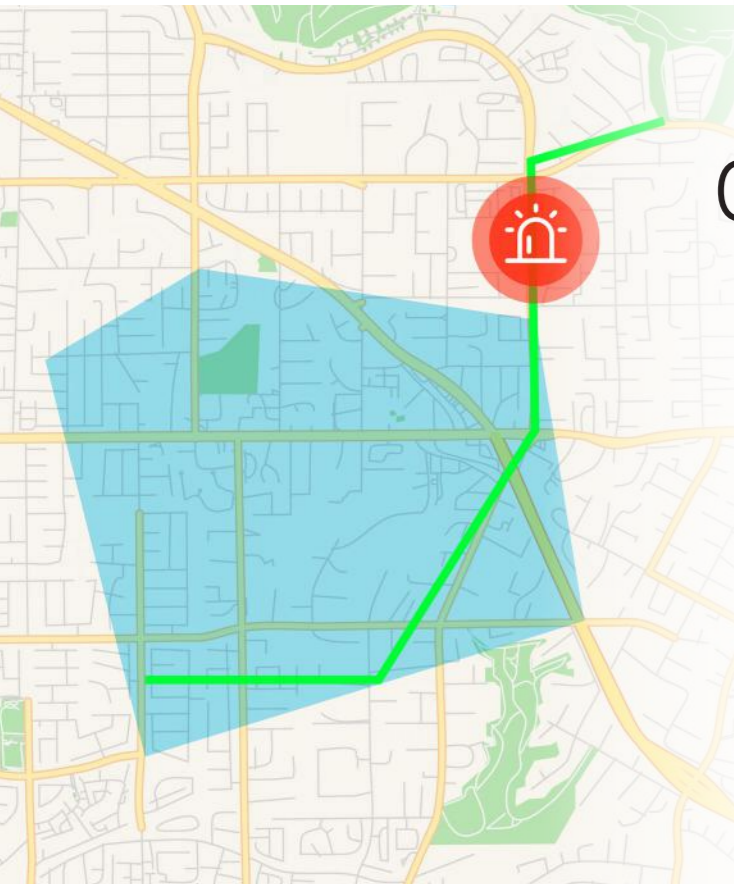

02/ Traveling Deviation Detection

Stop Skipping Detection

Alerts if drivers skip designated stops without authorization.

Route Deviation Detection

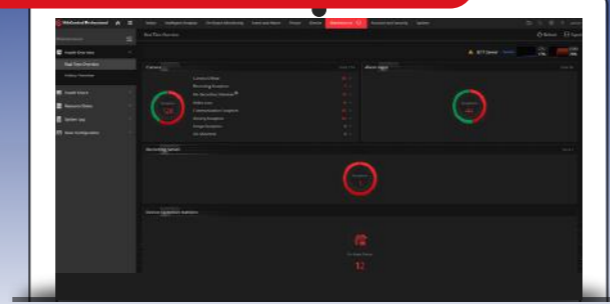

Utilizes GPS and estimated travel times to identify and alert the control center about deviations from planned routes.

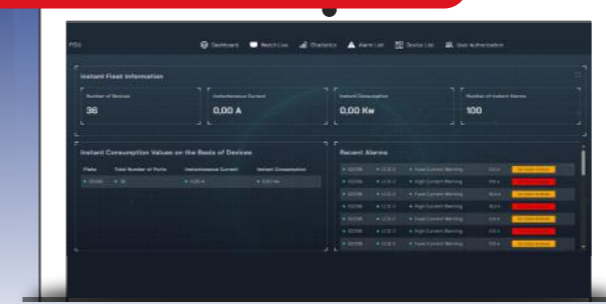

Easy System Maintenance

- Displays the status and health statistics of the equipment.
- Enables remote upgrades for Mobile Video Recorders (MVRs) and on-board cameras.
- Monitors current, voltage, and power consumption, and sets alarm thresholds to ensure safe operation.

HIKVISION®

HIKVISION®

Hikvision Smart Bus Solution

Transit buses play a vital role in public transportation globally. Despite their importance, conventional bus systems often face challenges related to operational safety and management efficiency. Monitoring unsafe driving, bus load, and environmental conditions can be limited, and issues with driver assessment and system maintenance persist.

Hikvision's Smart Bus Solution tackles these issues by offering an advanced, comprehensive system for enhanced supervision.

Comprehensive Transit Safety Management

Hikvision equips buses with various cameras to ensure complete coverage, addressing blind spots, bus interiors, loading and unloading areas, and the driver's seat, etc.

Outdoor Camera

Real-time HD monitoring of the bus environment

People Counting Camera

Monitoring of boarding and alighting procedures

Fisheye Camera/Dome Camera

Real-time HD monitoring inside the bus

Mobile NVR & Fire-proof Video Storage

Storage, backup, and transfer of recorded video and data
Real-time tracking, speed assessment, and collision alerts

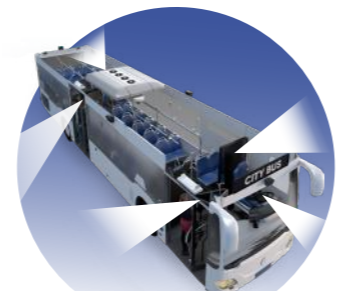

Anomaly Detection Camera

Analysis of unsafe driving behavior

LCD Monitor & Panic Button

Live preview for driver assistance

Intelligent Driving Assistance

Advanced Driver Assistance Systems

Features of ADAS include Forward Collision Warning (FCW), Lane Departure Warning (LDW), Headway Monitoring Warning (HMW), and Pedestrian Collision Warning (PCW) for improved driving safety.

Blind Spot Detection

BSD detects pedestrians, vehicles, and non-motorized traffic in blind spots and notifies the driver.

Driver Status Monitoring (DSM)

Intelligent Detection

Hikvision DSM Cameras identify hazards like driver fatigue, distractions, and smoke.

Timely Alerts

The system issues alarms to keep drivers alert and focused.

Unauthorized and Overtime Driving Detection

Unauthorized Access Alarm

Alerts when unauthorized individuals drive the bus or if drivers use buses and routes not designated to them.

Overtime Driving Alarm

Monitors driving duration and issues alerts if it exceeds preset limits.

Emergency and Consulting Management

Incident Handling

The control center will receive emergency and consulting calls, with all conversations automatically recorded to ensure quick and reliable resolution.
