Wardrobe rods add functionality and style to hanging space. Essential for basic wardrobes and adjustable to suit changing needs, rods are available in ddc branded, durable aluminum. Lining inserted on rods prevents metal-on-metal sound even with wire hangers while also protecting from surface scratches.

INTERIOR ACCESSORIES

BUILT-IN WARDROBE DRAWERS Bodies are manufactured from 25 mm cotton-colored engineered wood. They are manufactured in two different codes for 4 level and 2 level drawers. Drawer tabs are made out of aluminum profiles and smoky reflective glass. The top board of the product is manufactured from the standard 25mm cotton-colored engineered wood.

TROUSER HANGER / DRAWER FOR ACCESSORIES Their bodies are manufactured from 18 mm cotton-colored engineered wood. Drawer tabs are made of aluminum profile and smoky reflective glass. They are manufactured with Blumotion rails with double opening thanks to its new design.

Hanger profiles of trouser hangers are manufactured from Inox aluminum rounded profiles and their use is increased to the highest level thanks to plastic holders placed on the channels processed on the profile.

Drawer for accessories: Accessory compartments are divided by 12 mm cotton-colored engineered wood. They are manufactured without any top board. Extra shelves must be ordered. Order for extra shelves must be placed since top boards of these products vary, depending on your request.

SHOE SHELVES

SHELVES

GLASS SHELF Made of smoky glass placed within Inox aluminum frame. Glass shelves are manufactured with options such as illuminated / non-illuminated and with or without hangers. The illumination system is integrated with the frame. There is no difference between illuminated and non-illuminated versions in terms of appearance. Light is illuminated from the shelf towards the hanger. The hanger system is also integrated into the frame in the same way. The hanger cannot be integrated later on to a glass shelf without any hanger.

ENGINEERED WOOD SHELF Shelves are manufactured from 25 mm cotton-colored engineered wood. They are connected to the wardrobe body by the Rafix system. Engineered wood shelves can be manufactured as illuminated / non-illuminated and with or without hanger. When engineered wood shelves are illuminated, a lighting system is integrated into the front of the shelf. (see the detailed drawing of the illuminated engineered wood shelf)

Light is illuminated from the shelf towards the hanger. Light cannot be added later on to engineered wood shelves. A engineered wood shelf without a hanger can then be converted to a shelf with a hanger.

SHELF WITH TOUCH CONTROLLED LED Designed specifically for the Space series. Illuminated shelves are managed by a touchcontrolled lighting system in wardrobes with an open door. 1 entry for a Shelf with Touch Controlled LED must be made for each wardrobe body. While lights are controlled by sensors in other wardrobe bodies, they are controlled by buttoncontrolled shelves in open wardrobes.

WARDROBE *ROD*

Essential for basic wardrobes and adjustable to suit changing needs. Rods are available in ddc branded, durable aluminum. Lining inserted on rods prevents metal-on-metal sound even with wire hangers and also prevents surface scratches.

- 3 **SPAN WARDROBE**
- 4 Glass Shelf / With Hanger / Illuminated
- 5 SPLIT WARDROBE Built-In Wardrobe Drawer (Quartet)
- 6 SPAN WARDROBE Built-In Wardrobe Drawer (Double)
- 7 Engineered Wood Shelf

PRIMELINE

An elegant intersection of wood, marble, and metal creates graceful lines while offering a luxurious look. Earthy tones of rich wood define the kitchen island that is accompanied by the cantilevered marble counter. Cream-colored cabinets with light details in soft hues bring balance to the overall brutalist design.

B&WOOD

Simple elegance is underlined with the tones of black and white, accentuating functional design features. The starkness of the color scheme is made dynamic with stoneware countertops, unique textures of cabinet faces and warm wood details.

VISON

Crafted with high-end materials and tailored details, such as glossy cream lacquer cabinets and extra-durable worktop, the design offers a sense of luxury without giving up on minimalism. The custom-made design of the island helps create an airy atmosphere.

BALMORAL

Inviting blue cabinets and pure white countertops perfectly blend with natural wood details, referencing the overall design. The island offers extra space for a sink and cabinets while defining a dining area with its cantilevered countertop.

FOREST

An extraordinary mix of materials, linearity, and harmony induce a space that is more than just a cuisine. Bold materials like jet black cabinets, stoneware countertops, monolithic wooden cabinets, and mirror detail display mastery in the curation of various mediums.

BLUEWHITE

The intriguing use of the color blue changes the perception of what a kitchen should mean. A simple yet bold take on the materials creates a passionate and energetic atmosphere, bringing liveliness to simple lines.

KITCHEN ACCESSORIES

HÄFELE

Cutlery Tray, for 21" and 21 11/16" Deep Drawer, Plastic

Waste Management can be integrated into base cabinets

Aluminium sheets for underneath the sink

Kitchen cabinet deformations generally start from under or inside of the sink cabinets. To prevent this, Lazzoni uses aluminum coating for the lower sections of the sink cabinet.

Upper cabinet hangers are the most important hardware in the kitchens. While they are fixed properly to the wall, they must allow practical removal when needed. Also, the hangers must be easily adjustable after installation. For this reason, Lazzoni uses MIDI model by Hafele for top hanging cabinets.

Lazzoni uses locked shelf pins to minimize the risks of accidents in the cabinets.

Base cabinet legs are the most load-bearing parts in kitchen cabinets. Lazzoni uses legs made of durable and water resistant raw material, which are adjustable and fixed for long lasting maximized support.

BLUMOTION SYSTEMS

Blumotion system is used in all of our furniture with an opening system which is a mechanical opening system that lets you touch the drawer front to open the drawer - and a soft close.

Even if the drawer is manually pushed or pulled, tip-on blumotion works great the next time it's needed.

Blumotion is the softclose version of the Austrian industry leader hardware brand Blum.

Top Cabinets

Base Cabinets

Oven Cabinets

Sink Cabinets

The upper sections of the bottom cabinets are manufactured as closed cabinets. Thus, the items stored in the cabinet are protected better and a more aesthetic appearance is created.

ENGINEERED WOOD

Engineered wood is a form of furniture surface which we use in all our wood finishes. It is %100 ecological, man made and by far the most durable surface finish that has ever been used in the furniture industry.

Interior of our composite wood is made out of 100% recycled wood which is bound together by heat compression. No chemicals are used in this process, which could be harmful to any human or animal.

It's 50% lighter than natural/solid wood and 25% lighter than MDF, 10% lighter wood veneer. It is NOT wood veneer, MDF or Laminate. Engineered wood is the most technological and latest material used in the ecological furniture manufacturing industry.

No forest is harmed. As a matter of fact, cutting trees is banned in Scandinavian countries for the use of the furniture industry, which has consequences up to imprisonment.

The engineered wood surface finish is the latest and the most technological process used in the furniture industry. And as Lazzoni we are one of the largest manufacturers in Europe.

Our surface is scratch and water resistant and carries the same exact characteristic, painted and stained solid wood but its %50 lighter, 5 times more durable, and 100% eco-friendly. That's why we offer the best wood furniture surface finish that there is.

CERAMICS

A ceramic is an inorganic non-metallic solid that has been formed and then hardened by heating to high temperatures.

While traditional ceramics are clay-based, high-performance or advanced ceramics are being developed from a far wider range of inorganic non-metal materials. Advanced ceramics we use in our products have the properties of high strength, high hardness, high durability and high toughness.

Ceramics' most significant general characteristic is that they are refractory: they are tough materials that can withstand moderate abuse in both common and unusual circumstances. In general, ceramics have:

- High melting points which means they are heat resistant.
- Great hardness and strength. Ceramics have high hardness and low ductility, so they are far from brittle, fractures and deforming.
- Considerable durability. They're long-lasting and hard-wearing, having the ability to withstand pressure or damage.
- Low electrical and thermal conductivity. They're good insulators.
- Chemical inertness. They're unreactive with other chemicals.

All these properties make ceramics an indispensable part of our daily lives. We use custom ceramics ordered specifically for Lazzoni in all of our ceramic finishes. Just like all the other materials we use, we offer the best in ceramics as well.

LUSSO

Minimal yet versatile, the custom storage unit offers work space, entertainment/media unit and various storage options. A compact design with elegant details and smart functions.

MANHATTAN

Bringing in a new aesthetic for the living areas, the custom bookcase showcases elegance with wood and ceramic details. The slender grid structure of the unit combines shelves and doors creating various display and storage areas.

MANHATTAN

Combining media unit with storage, work area and display shelves, the custom day system makes the most of grand living. LED light system and natural materials add to the chic look of the unit.
