Allround Rollator

For more joy of life:
Premium quality and fully equipped

The Saljol Allround Rollator

Premium quality with many extras

The premium product impresses with its high quality and offers numerous features for your safety, such as over 30 reflectors, non-slip, skin-friendly handles, a practical stick holder, and top-quality brakes. With additional accessories, you can further optimise your rollator.

Safety you can feel – „hand-hugging“ Cork-TPE handles with armrest

The push handles are made from skin-friendly cork-TPE, which combines the sustainability, lightweight nature, and tactile feel of natural cork with the durability and resistance of plastics. They offer a secure grip thanks to their ergonomic wing shape, preventing your hands from slipping. The shock-absorbing and heat-retaining material reduces pain and promotes the mobility of your hands and fingers, especially for sensitive skin. The non-slip, quick-drying properties ensure secure comfort even in wet conditions. The Cork-TPE armrest makes resting your arms while seated very comfortable. As cork is a natural component of the handle, a typical dark patina may form due to the natural material's reaction with your palms. However, the handles are still easy to clean and remain hygienic.

Cork-coloured design elements guide you through the functions of Saljol Rollators

The design makes intuitive operation easier thanks to cork-coloured, brown components. All adjustable elements are immediately recognisable, allowing quick and secure adjustment to your needs. The well-thought-out colour scheme ensures clarity and maximum comfort in everyday use.

Visibility ensures safety

More than 30 reflectors and reflective strips on the rollator ensure that you remain highly visible in low-light conditions. Whether in traffic or during leisure activities, the reflective elements make you and your rollator more easily noticeable to other road users.

Compact and foldable – ideal for easy transport

The rollator can be folded to a width of just 21 cm with a single movement. When folded, it can be securely locked with a hook, making it easy to load and store compactly and stably. Thanks to its lightweight design and narrow dimensions, it can be easily transported in a car or while travelling.

Optional one-hand braking system – brake with one or both hands for maximum control at no extra charge (on request)

The conversion to a one-hand simultaneous brake allows you to fully brake the rollator with just one hand. This braking system is particularly helpful for those experiencing age-related loss of strength or unilateral limitations, such as after a stroke, with Parkinson's, or fractures, and enables you to operate both brakes with minimal effort. The necessary longer cable for the brake system will be sent to you free of charge upon request.

Highest quality in every detail – you'll feel it!

The smooth-running hand brakes allow for effortless braking and are easy to operate, even with smaller hands. The ergonomic shape and cork-TPE covering provide a secure and comfortable grip. When you engage the parking brake, a clear clicking sound lets you know that the rollator is securely in place – ideal for sitting down or filling the bag.

Extra large, shock-absorbing and grippy – wheels for every situation

The tyres with a particularly grippy tread provide stability and comfort on uneven surfaces such as cobblestones, field, or forest paths. In addition, the 250 mm large all-terrain front wheels prevent the wheels from getting blocked by small obstacles such as roots or potholes. This reduces the risk of falling and allows for safe movement – ideal if your sense of balance is impaired or your attention is reduced. The shock-absorbing PU solid rubber material functions almost like an air tyre, but without the risk of punctures. It also protects your hands, elbows, and shoulders, providing noticeable relief for those with rheumatic or neurological conditions.

Overcome obstacles safely and effortlessly with non-slip tipping aids

The non-slip, rubberised tipping aids are positioned at the rear of the frame, near the back wheels. They make it easier to navigate curbs, thresholds, and uneven surfaces. The flat step surface provides a secure grip, reduces the risk of falls, and offers added stability.

Secure hold for your walking stick – always within reach

The universal cane holder adapts flexibly to different mobility aids and walking sticks. With a unique locking system, the stick is securely fixed and always within reach. A clicking sound lets you know that the stick is safely attached.

Your support wherever you go – the lightweight and foldable walking stick

The walking stick is incredibly lightweight at just 278 g, yet remarkably durable. Made from high-quality carbon fibre, it impresses with its top quality and elegant look. It is also height-adjustable, foldable and always stable – the perfect combination of functionality and elegance. It is available directly at www.saljol.de/en, through our service team, or at a medical supply store near you.

Retrofittable grinding brake – your rollator can be tailored to your needs

Safety and control while walking are your top priorities? The retrofittable grinding brake (accessory for your rollator) provides exactly that. The rolling resistance of the rear wheels can be individually adjusted, gently braking without locking (ABS), and preventing your rollator from rolling faster than you want – especially helpful on slopes. The brake supports you optimally in cases of walking instability, can counteract incorrect directional drift, and thus reduces the risk of falling. Once properly adjusted, you can activate or deactivate it with your foot.

The right product for you – available for every need

Saljol Premium Rollators are available in two sizes, elegant colours, and additionally with a wider seat (52 cm) and higher weight capacity (180 kg). This gives you the option to choose the solution that best suits your needs and personal taste. Whether for more comfort, functionality, or style – you will find the perfect combination to meet your requirements.

German Engineering from Bavaria.

German Design

Great luxury that remains affordable

Saljol Rollators offer the perfect mix of functionality, quality, and a touch of luxury. German engineering combines high-quality features with comfort to make your everyday life easier – all at a fair overall price.

Comprehensive support – for your mobility and safety

Our physiotherapist, Katharina, supports you in all areas where expert physiotherapeutic knowledge is required. Our helpful customer service is always at your side – whether in the medical supply store or directly with us. If you have any questions or uncertainties regarding your Saljol Allround Rollator, we provide the support you need to get the most out of your rollator.

Training with your rollator

To avoid medical side effects when using our rollators, we invented Rollastic. It's a tailored exercise programme for rollator users that, when performed regularly, can help maintain mobility and strength. Special videos are provided with the rollator. For your safety in road traffic, we developed the safety training „Rollator Mobility“. Helpful tips and tricks can be found at www.rollatormobility.com.

Peter: „I've got my mobility back!“

„Thanks to the Allround Rollator, I regained much of my mobility after my stroke. The lack of mobility in my left hand is a problem for me, and I struggle immensely with fine motor skills. The one-hand brake on the Allround Rollator helps me enormously. After the stroke, I came home completely helpless and thought that travelling would no longer be possible. Wrong! There's always a way! You just have to give it a try.“

When you engage the parking brake, a clear clicking sound lets you know that the rollator is securely in place – ideal for sitting down or filling the bag.

Built-in safety: grinding brake for better control when going downhill or when more support is needed

Safety and control while walking are your top priorities? The grinding brake on the CR provides exactly that. The rolling resistance of the rear wheels can be individually adjusted, gently braking without locking (ABS), and preventing your rollator from rolling faster than you want – especially helpful on slopes. The brake supports you optimally in cases of walking instability, can counteract incorrect directional drift, and thus reduces the risk of falling. Once properly adjusted, you can activate or deactivate it with your foot.

Very light and stable with a total weight of only 5.6 kg

The Carbon Rollator is exceptionally light and manoeuvrable, weighing just 5.6 kg and with a width of 61 cm. The weight has been carefully chosen as a good compromise between driving stability and ease of handling. Too light can quickly become unstable, while too heavy can be an obstacle when loading or carrying.

Secure hold for your walking stick – always within reach

The universal cane holder adapts flexibly to different mobility aids and walking sticks. With a unique locking system, the stick is securely fixed and always within reach. A clicking sound lets you know that the stick is safely attached.

Marietta: „I enjoy showing off my Rollator!“

„I suffer from HMSN/CMT, a neuromuscular disease. That's why I like the ergonomically shaped handles of the Carbon Rollator, as they give me more stability. The wide support surface allows me to safely lean on the rollator, especially when I experience pain in my legs on hard surfaces. Unlike plastic handles, rain doesn't affect these handles. You don't slip, and you don't feel like your hands are wet. The safety is still there, and they don't get cold quickly. Also, my carbon rollator is my Porsche – I can go out in style with it. I have no reservations about that.“

Indoor Rollator

The sturdiest Indoor Rollator
in the world – safely practical

The Saljol Indoor Rollator

Premium quality with many extras

This premium product has been specially developed for your safety at home. You can rest on the seat board or move through the rooms. The directionally lockable rear wheels make it easier to drive straight ahead. You can use the brake bar, which matches the colour of the rollator frame, as an alternative to the brake handles. You can customise your rollator even further with additional accessories.

Stable like a mobile handrail – optimal support with every movement

The indoor rollator provides extra support within your home, especially in cases of unsteady walking, dizziness, or balance issues. Thanks to its sturdy, ergonomically designed frame, you can safely lean on any side of the rollator at all times without the risk of it toppling over.

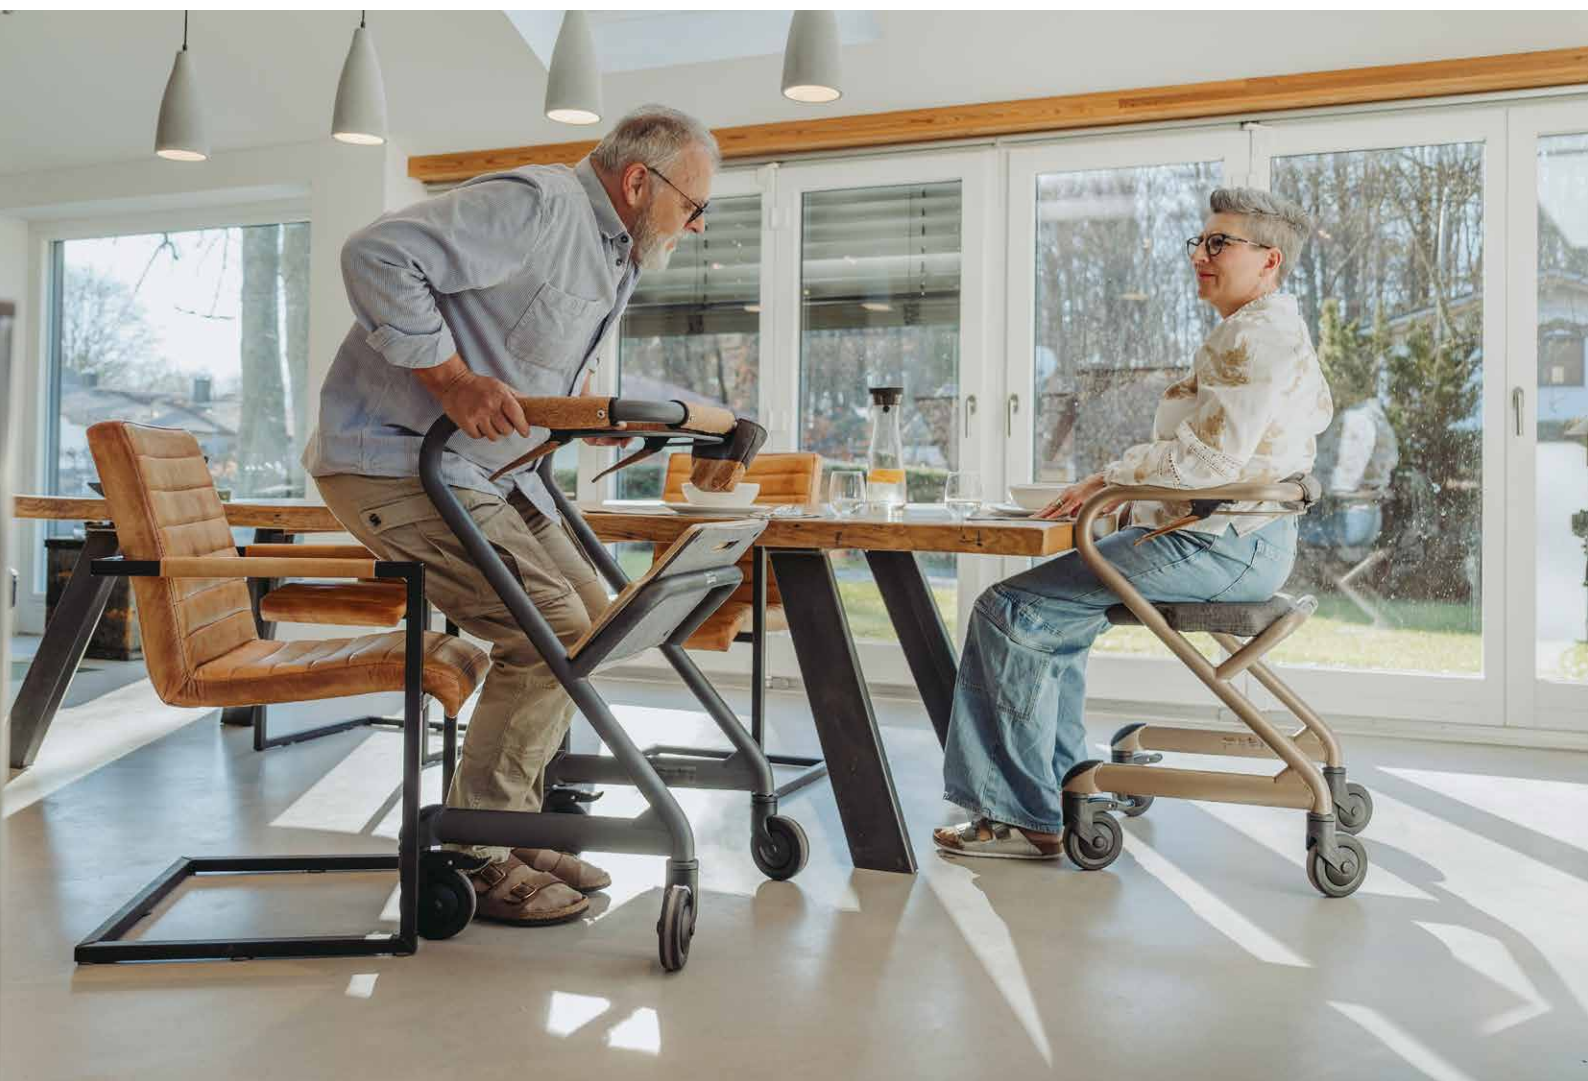

Internal brake cables – innovative solution for your safety

All the brake cables of the rollator run through the sturdy frame, eliminating the risk of snagging. This ensures you can move safely through rooms without getting caught on furniture and place everyday items on the tray without getting entangled in the cables.

Double the comfort when braking

Thanks to the brake bar, you can slow down the rollator evenly with one hand or activate the parking brake. You don't need to worry about where you grip the bar, as it can be operated from any position.

Rolling seat – enables easy movement while sitting by tripping

In cases of rapid fatigue, fall risk, weak leg muscles, or joint instability, the rollator offers a large seat with a warm felt cushion. Tripping – moving forward while seated using your feet – is explicitly permitted with this rollator. Safely navigate through different rooms or comfortably prepare your meals in the kitchen while sitting.

Lockable rear wheels – more control and stability when moving straight

The rear wheels can be locked in the longitudinal direction to provide more control and stability while moving straight. This feature is especially helpful when you need to lean more heavily on the rollator.

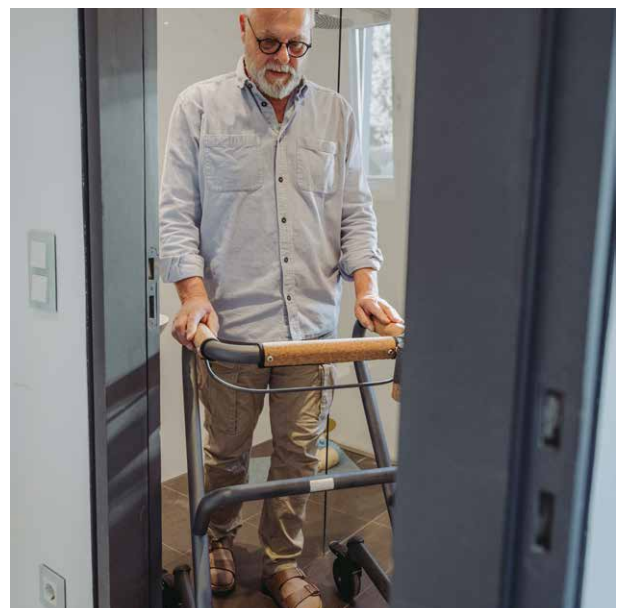

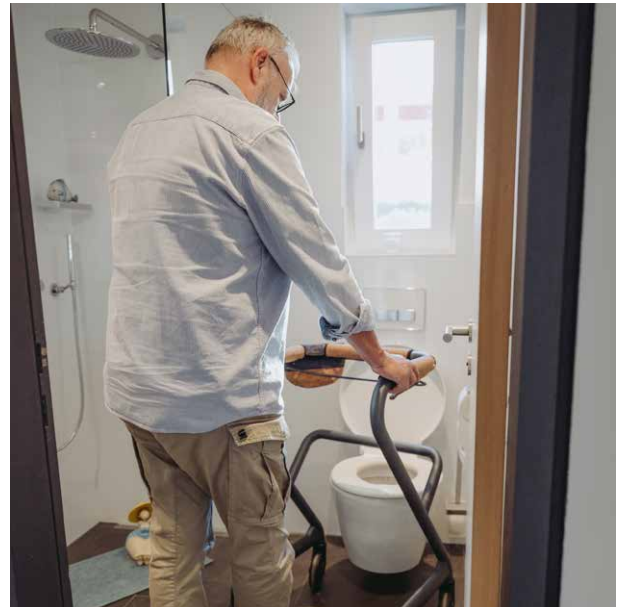

Flexibility even in tight spaces

The indoor rollator ensures safe navigation through narrow doorways and cramped or cluttered hallways and rooms. With its 360° maneuverability, it can be easily moved sideways or lengthways through doors or tight spaces between furniture. Stability is maintained at all times, allowing you to lean on it securely from any direction.

A highly practical bathroom aid: walk, stand, and turn on the spot

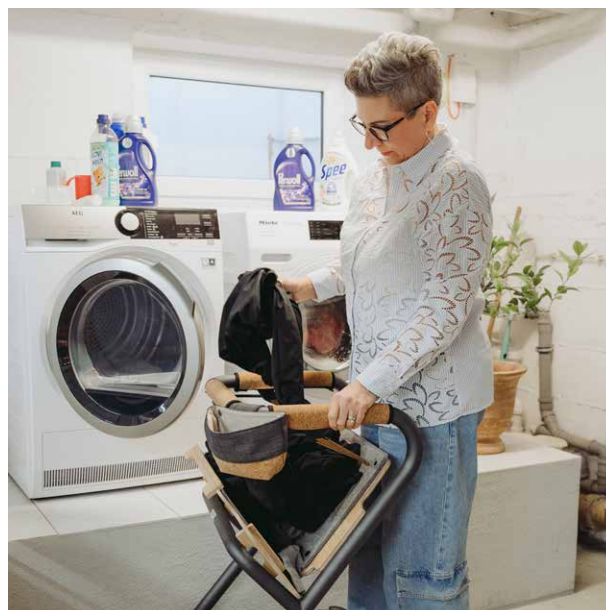

The indoor rollator offers reliable support for daily hygiene and bathroom visits. Thanks to its 360° maneuverability and thoughtfully designed frame, you can comfortably lean on it from the side or back and position it directly in front of the sink. It can easily roll over a standard-height toilet, allowing you to hold on securely while sitting down or standing up.

Versatile household helper for every situation

The indoor rollator provides reliable support for transporting everyday items. Its sturdy tray with a non-slip felt pad offers a secure way to serve food and drinks, keeping cups and plates firmly in place. For larger items like laundry baskets or flower pots, the durable seat board serves as a practical surface. With your hands securely on the rollator, you can effortlessly and safely move everything from one place to another.

Skin-friendly handrail pads for maximum comfort

The removable, skin-friendly handrail pads made from cork fabric and neoprene feel exceptionally comfortable. The shock-absorbing and heat-retaining materials support the mobility of your hands and fingers, especially if you have sensitive skin. Their non-slip, quick-drying properties ensure a secure grip, even in wet conditions.

Practical bag – essentials always within reach

The removable, colour-coordinated bag ensures that personal items like keys, a phone, or tissues are always close at hand. Whether you're walking without the tray – such as during a trip to the bathroom or while moving through your home – or using the tray for serving, the bag keeps your essentials easily accessible.

The right product for you – available for every need

Saljol Indoor Rollators are available in four sizes, elegant colours, and additionally with a wider seat and higher weight capacity. This gives you the option to choose the solution that best suits your needs and personal taste. Whether for more comfort, functionality, or style – you will find the perfect combination to meet your requirements.

Claudius: “Being able to sit and move on the rollator makes my daily life so much easier!”

„Whether I’m cooking, unloading the dishwasher, or moving around my flat, the indoor rollator is a great support. Not as a typical rollator, but as a readily available seat. When I become exhausted and can’t stand anymore – which happens very quickly due to my MS – I can simply lean on it and sit down. That’s the biggest benefit for me. It’s like a mobile seat that allows me to move around my home with ease.”

RA

Riser Armchair

Safe and sound:
your perfect spot for relaxation

The Saljol Riser Armchair

Premium quality with lots of features

This premium product stands out with its high quality and offers a range of safety-enhancing features, including a rise and recline function, a magnetic remote control, a side pocket, and a USB port. With additional accessories, you can further customise your chair to suit your needs.

Smart and elegant design for your well-being

The Saljol Riser Armchair combines a sleek, modern look with maximum comfort. Its thoughtfully designed structure creates an inviting atmosphere while providing a sense of security and cosiness. The distinctive „wings“ offer additional privacy, allowing you to relax even more deeply. A true feel-good piece of furniture that perfectly combines style and function!

Quality that speaks for itself

This chair perfectly combines comfort and premium materials. High-quality comfort foam provides ideal support and a pleasantly soft feel – perfect for both sitting and reclining in total relaxation.

The upholstery is easy to clean, water-repellent, fire-resistant, urine-resistant, and machine washable at 60 °C – ensuring maximum hygiene and safety. All materials comply with strict EU standards (REACH, RoHS).

Adjustable seat depth – perfectly customised

The riser armchair adapts effortlessly to your leg and thigh length with its two-stage adjustable seat depth.

Enjoy maximum comfort, a healthy sitting posture, and the perfect relaxation experience – whether you're unwinding or getting up with ease.

Two colours – perfect for your home

Platinum Grey and Graphite Grey – the elegant chair is available in these two stylish shades. Like a chameleon, it blends seamlessly into any living space. Choose your upholstery set in either of these colours to suit your taste and turn your chair into an eye-catcher in your personal haven of comfort.

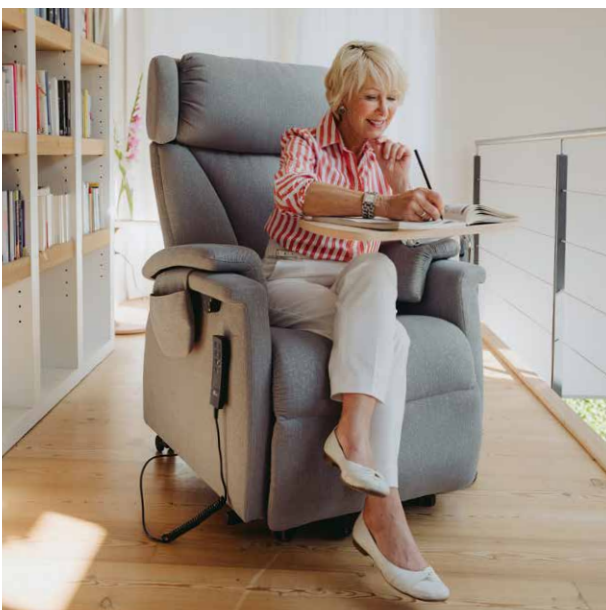

Choose the upholstery that suits you best

Since the base of the riser armchairs is essentially the same, you have the freedom to select your preferred upholstery: Classic upholstery – elegant and supportive for a firmer, more stable sitting experience or soft upholstery – plush and cosy for maximum comfort.

Both models offer premium comfort and an exceptional seating and reclining experience as the seat area and lumbar section of the backrest have been specially reinforced. Whether sitting or reclining, your back experiences noticeable relief – especially if you spend a long time in the armchair. By varying the cushion types, you can easily adjust the seating position to suit your personal needs.

The soft upholstery pampers you with thick and soft cushions – perfect for petite individuals or anyone who loves extra-comfort. Its innovative V-shape with winged structure provides optimal lumbar support, promotes relaxation, and ensures a comfortable posture.

Maximum comfort: infinitely adjustable from “feet up” to nap time

The cosy Saljol Riser Armchair is your personal oasis of relaxation at home. Whether you want to put your feet up or enjoy a restful nap, simply use the remote control to extend the footrest and recline the backrest smoothly. The independent adjustment of the footrest and backrest allows you to customise your seating and lying position to your preference. For even greater comfort, the adjustable headrest can be tilted forward or backward – just the way you like it.

Clever & practical: the magnetic remote control

Your remote is always right where you need it! Thanks to its magnetic function, it securely attaches to the headrest or armrest of your chair – no more searching or misplacing it. With seven pre-programmed buttons, you can adjust the backrest and footrest either individually or in sync, exactly to your preference. Simple and intuitive!

Effortless sitting down and getting up – comfort and safety combined

This armchair actively supports you when sitting down and standing up – gently and effortlessly at the push of a button. When raised, you can lean against it carefully as the armchair lowers you smoothly into a seated position. To stand up, simply use the remote control to gradually lift yourself into an upright position, allowing you to exit the chair with ease. The integrated lift-assist function helps prevent falls and supports your independence.

Always charged – USB charging station directly on the armchair

No more searching for power sockets! With two integrated USB Type-A ports, you can conveniently charge your phone or tablet right from your armchair. Whether you're making calls, chatting, or reading, enjoy your relaxation time without worrying about the battery level.

Everything within reach in the practical side pocket

Thoughtfully designed down to the smallest detail, the integrated side pocket offers space for your most essential items. Whether it's a book, reading glasses, or the remote control – everything is safely stored and always within arm's reach. This way, you can enjoy relaxing hours without having to search for anything.

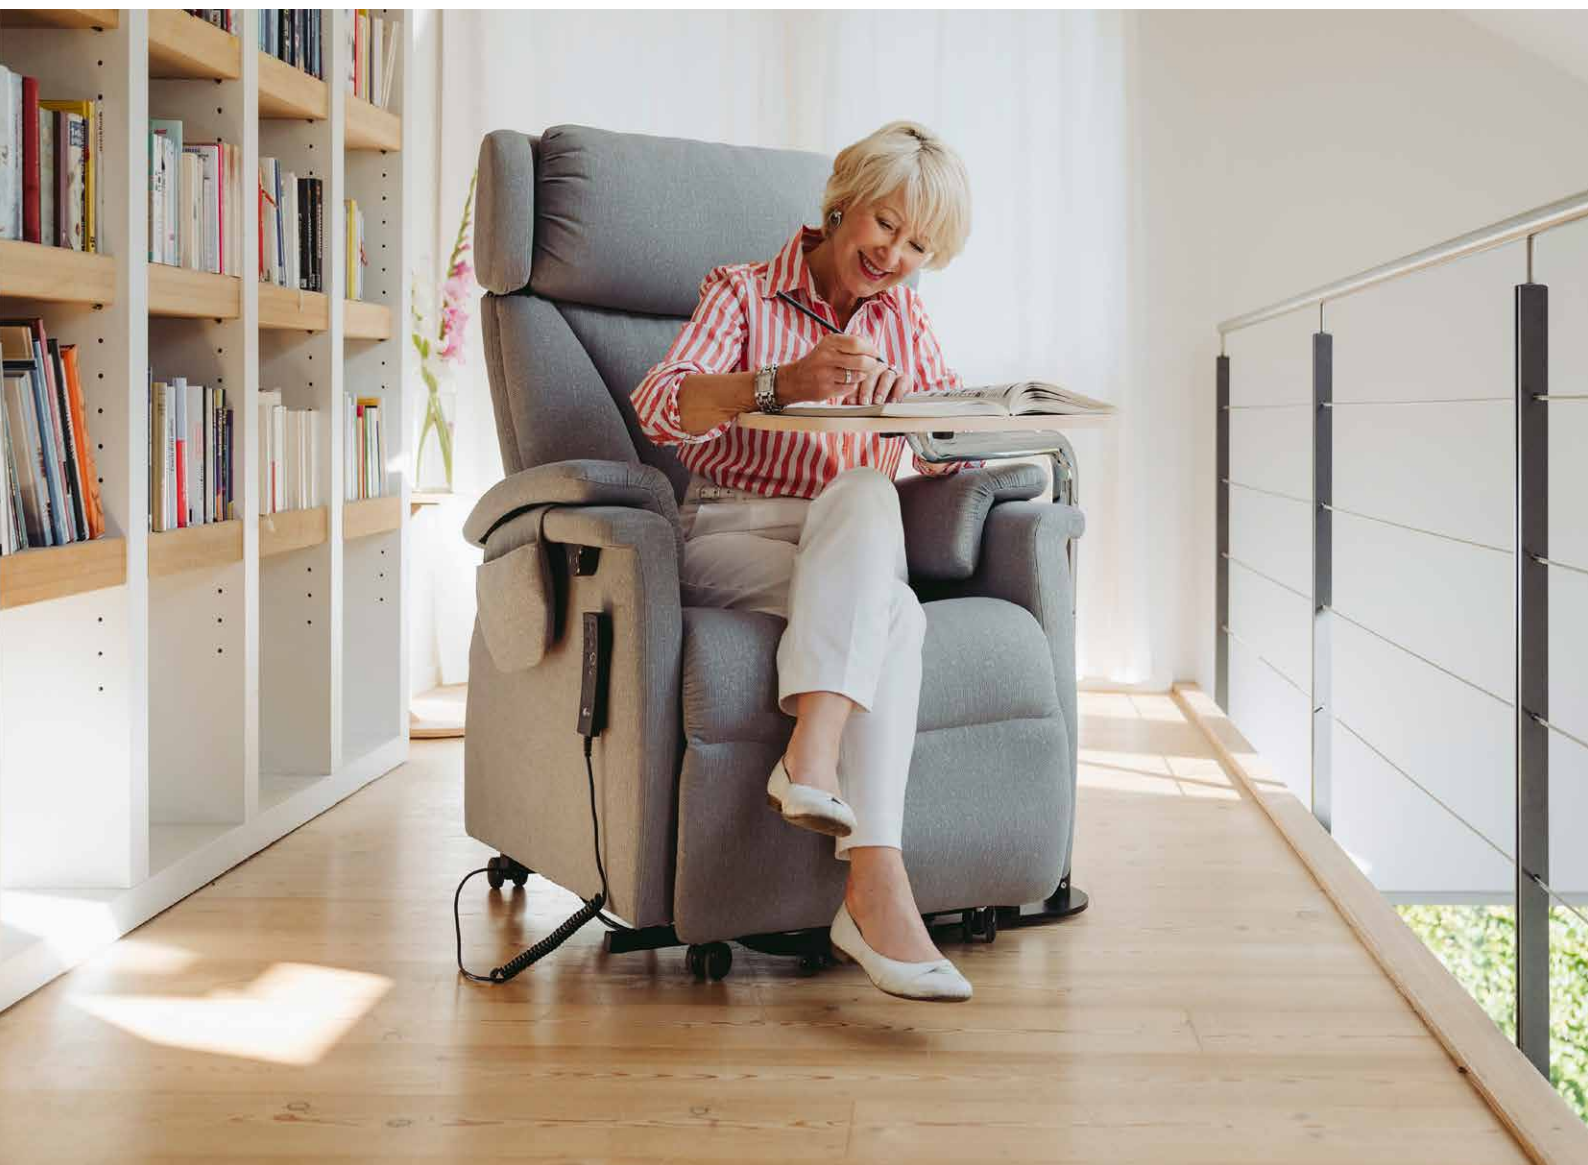

Ultimate comfort: additional accessories for your armchair

Enhance your relaxation and personalise your comfort with these three accessory highlights:

Head & lumbar cushion – the head cushion promotes a relaxed posture, while the lumbar cushion relieves the lower back and supports an ergonomic sitting position.

Tablet/smartphone holder – keep your devices in view and within easy reach – without the hassle of holding them. Enjoy movies, music, or effortless communication with family and friends from the comfort of your armchair.

Swivel table „Tabula“ – a practical and flexible table for drinks, plates, or books. Its convenient swivel function adapts to your needs.

German engineering from Bavaria.

German Design

Great luxury that remains affordable

Our riser armchairs combine the highest quality with German design – delivering maximum comfort, relaxing moments, effortless standing up, and an overall pleasant seating experience.

Comprehensive care and support – for your mobility and safety

Our physiotherapist, Katharina, supports you in all areas where expert physiotherapeutic knowledge is required. Our helpful advisory service is always at your disposal – whether at the medical supply store or directly with us. Your safety and mobility are our top priority! If you use a rollator, our „Rollator Mobility“ training provides valuable tips and tricks for daily use. Visit us at www.rollatormobility.com for more safety and enjoyment on the go!

Scan the QR codes to explore our rollator product brochures and get inspired by how a rollator can make your daily life more comfortable and secure.

Saljol offers not only high-quality riser armchairs but is also a specialist in premium rollators. These aids enhance your quality of life in everyday activities. We are committed to expanding your freedom and improving your mobility, as strong and flexible muscles are not just the key to relaxed sitting and effortless standing. To further boost your mobility, we offer targeted exercise routines to counteract prolonged sitting. Enhance your well-being with Rollastic, simple exercises that you can even perform directly in your armchair.

Peter: „In the reclining position, I can relax and daydream!“

„I find the riser armchair incredibly comfortable. It's perfect for unwinding, and later I can move around the apartment with my rollator. The lift-assist function is especially important to me. I can raise the chair, and I'm already at a height that allows me to walk. Another key feature is that I can recline the chair to fully relax, close my eyes, and drift off into a daydream – it's just great! Plus, the chair is very easy to use.“
