Official show guide from

Quarry Management

Welcome to Hillhead

2 **Visitor Information**
Essential information for all visitors to Hillhead 2026.

4 **Hillhead Quarry Site Plan**
Map of the main showground showing stand numbers and other key locations.

6 **Pavilion Plans**
Detailed plans of the Showground and Registration Pavilions.

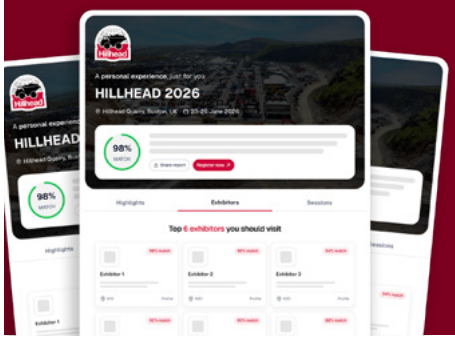
10 **Demonstrations**
New for 2026, the Quarry Face Demonstration Area will host a curated live show programme. Visitors can also explore live action throughout the show across all four demo areas: the Quarry Face, East, Registration, and Rock Processing.

12 **Exhibitor List**
A complete alphabetical listing of exhibitors and their stand numbers.

21 **Hillhead Spotlights**
Twenty pages focusing on just a few of the new products and services on display at this year's show, plus key contributions from the Institute of Quarrying, Tarmac and BDS.

54 **Exhibitors A-Z**
A guide to all exhibitors at Hillhead 2026.

184 **Product Locator**
Looking for a particular product, equipment or service? Use the product locator to find out who is showing what.



Build your personal Hillhead experience

Get the most from your visit to Hillhead, build a personalized schedule through our new AI planning tool, powered by Exhibitly. No log in required, just fill in your job title and business name and plan your visit today at **hillhead.com/exhibitly**

This month's cover

Visit **Hitachi Construction Machinery UK** on stand Z3 to see the latest Zaxis-7 models and experience the groundbreaking equipment from our HCT department, including our new telematics platform LANDCROS Connect. Watch out for us in the Demo area too!

Neither the Editor nor The QMJ Group Ltd accept responsibility for statements or opinions expressed by contributors in either editorial or advertising.

All advertisements are assumed to be bona fide by the publishers who reserve the right at their sole discretion to refuse to accept advertisement copy which is not considered suitable for publication in this journal.

The QMJ Group Ltd supports the quarrying industry's 'Target Zero' health and safety initiative and therefore requests that authors, editorial contributors, and advertisers ensure that all images submitted for publication in Quarry Management depict good health and safety practice.

Quarry Management is printed by Buxton Press Ltd.

Visitor Information

Venue
Hillhead Quarry, Buxton, Derbyshire, SK17 9PR, United Kingdom

Open times
Tuesday 23 June: 09:00–18:00
Wednesday 24 June: 09:00–18:00
Thursday 25 June: 09:00–16:00

Registration
Hillhead is free to attend and trade visitors should order their entry badge in advance at **www.hillhead.com**

Please note that Hillhead is a trade event and is not open to the public.

Wi-Fi
Free Wi-Fi hotspots are available across the site.

Children
Children under the age of 16 will not be admitted to the show.

Dogs
Unless required for assistance, dogs are not permitted on-site at any time.

Accessibility
Disabled visitors and those requiring assistance should contact the organisers in advance.

Safety
The ground is uneven and consists of loose rock and gravel. We request that visitors wear sturdy, suitable footwear. Sandals, flip-flops, high-heels and pumps are not appropriate and may cause injury. Also allow for British summer weather – rain coats and sun cream.

Sustainability
We've banned single-use plastics from the show and so encourage you to bring a resuable bottle and fill up at our Hydration Stations, located in the Registration Pavilion, Showground Pavilion, and Organisers' Office.

Plan your visit
Beat the traffic queues by planning your visit outside of peak hours. Arriving from midday on Tuesday or Wednesday, or visiting on Thursday, will ensure a smoother, faster entry to the Show. With Hillhead open until 18:00 on both Tuesday and Wednesday, you'll still have plenty of time to make the most of your visit.

Travel

Road
Hillhead is 5km south of Buxton off the A515 (Ashbourne road). The postcode for Sat Navs is SK17 9PR.

Parking
Free parking is available adjacent to the showground and a complimentary shuttle service connects the car parks and Registration Pavilion. To help reduce congestion and support sustainability, visitors are encouraged to car share where possible.

Air
The closest airports are Manchester (MAN) 49km and East Midlands (EMA) 89km.

Contact **hillhead@qmj.co.uk** for helicopter landing information and co-ordinates.

Rail
Buxton train station is 5km from Hillhead with regular services to/from Manchester. UK train tickets can be booked online at **www.nationalrail.co.uk**

Taxi
We advise visitors requiring taxis to book in advance. A list of local companies can be found at www.hillhead.com/visit/travel

Thank you to our **Sponsors**

A plethora of services and facilities to assist visitors and the organisers at Hillhead 2026 have been made possible by the generous support of the show's sponsors. The organisers, The QMJ Group, would like to acknowledge the following companies:

Live demonstrations like never before...

New for 2026, the Quarry Face Demonstration Area will host a curated live show programme, giving visitors an entirely new way to experience the latest heavy machinery in action.

At selected times throughout the day, leading manufacturers will put their machines through their paces in a series of dynamic demonstrations, complete with expert commentary and live interviews streamed onto a giant screen overlooking the action. With a wide range of new product launches set to feature, visitors will see exactly what today's most advanced equipment can do in a real working quarry environment, while hearing directly from the engineers, innovators and operators behind it.

Beyond the curated programme, visitors can explore live action throughout the show across all four demo areas: the **Quarry Face**, **East**, **Registration** and **Rock Processing** zones, with machinery, attachments, processing equipment and recycling technology all in operation.

Quarry Face: Curated Demo Programme

Tuesday 23rd

11:00 - 11:10 **Hyundai**
11:10 - 11:20 **Case**
11:20 - 11:30 **LiuGong**

12:30 - 12:40 **JCB**
12:40 - 12:50 **Hitachi**
12:50 - 13:00 **Develon**
13:00 - 13:10 **Sany**

14:00 - 14:10 **Komatsu**
14:10 - 14:20 **SBM**
14:20 - 14:25 **Corgin**
14:25 - 14:35 **XCMG**

Wednesday 24th

11:00 - 11:10 **Komatsu**
11:10 - 11:20 **SBM**
11:20 - 11:25 **Corgin**
11:25 - 11:35 **XCMG**

12:30 - 12:40 **Hyundai**
12:40 - 12:50 **Case**
12:50 - 13:00 **LiuGong**

14:00 - 14:10 **JCB**
14:10 - 14:20 **Hitachi**
14:20 - 14:30 **Develon**
14:30 - 14:40 **Sany**

Thursday 25th

11:00 - 11:10 **JCB**
11:10 - 11:20 **Hitachi**
11:20 - 11:30 **Develon**
11:30 - 11:40 **Sany**

12:30 - 12:40 **Komatsu**
12:40 - 12:50 **SBM**
12:50 - 12:55 **Corgin**
12:55 - 13:05 **XCMG**

14:00 - 14:10 **Hyundai**
14:10 - 14:20 **Case**
14:20 - 14:30 **LiuGong**

CASE

CASE presents an equipment package designed to enhance productivity, efficiency, operator comfort and safety across daily quarrying and recycling operations, featuring the CX210ES crawler excavator alongside the 921G+ and 1121G+ X-DRIVE wheel loaders.

Corgin

High-performance dust suppression is demonstrated using Corgin's portfolio of dust control solutions. The live demonstration features the MistCannon Ranger, DustLayer and MistCannon Integral, alongside DustFast applications across selected areas of the showground.

Together, the systems demonstrate effective dust control at source, across large working areas and on unmade surfaces. From mobile misting technology to water-saving surface treatment, Corgin's solutions support site safety, operational efficiency and environmental compliance.

DEVELON

The new DEVELON Series 9 crawler excavator introduces E-Stop, described as the industry's first excavator safety technology of its kind, helping to raise safety standards on site. Equipped with intelligent safety systems, the machine provides operators with real-time awareness of surrounding activity and can automatically halt movement when a person enters the 4m safety zone.

Hitachi

Making a strong impression in the Hillhead demonstration area, Hitachi's ZX490-7 takes centre stage at the quarry face. Powered by the same engine class as larger Zaxis-7 models, the machine delivers increased workload capability over its predecessor. Designed for demanding operating environments, the ZX490-7 combines reliability, fuel efficiency and productivity to support heavy-duty quarrying applications.

Hyundai

See Hyundai's all-new HX400L Next Generation crawler excavator and HA45A 4x4 articulated dump truck working together in a live quarry loading and hauling demonstration. Delivering fast loading cycles, efficient material movement and advanced safety technology, Hyundai's latest high-production quarry package combines productivity, fuel efficiency and operator comfort to meet the demands of modern quarrying applications.

JCB

JCB demonstrates quarry excavation performance with its 520X and 420X machines, combining efficient hydraulic systems, high breakout forces and stable operating platforms. The live demonstration highlights strong bucket fill characteristics, rapid cycle times and controlled operation in quarry face conditions. Heavy-duty construction and configurable boom geometry contribute to durability and consistent productivity across demanding quarrying and bulk excavation applications.

Komatsu

Power meets precision as the Komatsu WA485-11 and HM460-6 demonstrate efficient loading and hauling performance in the live demonstration area. Fast cycle times, smooth bucket control and high payload capacity highlight the combination's productivity, fuel efficiency and integrated machine performance across demanding quarry applications.

LiuGong

LiuGong's live quarry demonstration showcases a fully integrated battery electric quarry solution in operation. The DR50CE rigid mining truck, 4280DE motor grader and 8110TE wheel loader work together as a connected fleet, delivering high productivity, zero tailpipe emissions and reduced operating costs in demanding quarrying applications.

Under the theme 'Expert Insight. Proven On Site.', the demonstration highlights more than 10 years of battery electric vehicle (BEV) development and over 20,000 electric machines delivered globally.

SANY

Power and efficiency combine as SANY machines drive productivity across the quarry face in a live demonstration. The SY390H excavator delivers consistent high-volume output to the crusher, while the all-electric SW956E wheel loader supports efficient material handling across site. Fast cycle times, precise control and intelligent system integration highlight SANY's focus on performance, sustainability and operational efficiency.

SBM

See the SBM REMAX 450 put through its paces at the Hillhead quarry face. This hybrid electrified mobile crushing and screening solution is engineered for quarrying, recycling and high-efficiency aggregate production, processing limestone at rates of up to 450 tonnes/h while consuming less than 25 litres of fuel per hour.

XCMG

Experience XCMG live at Hillhead 2026 as the XE300E excavator and XC998 wheel loader demonstrate smooth hydraulic performance, rapid loading capability and heavy-duty productivity in the live demonstration area. Together, the machines highlight the strength, efficiency and operator-focused engineering behind XCMG's growing presence across quarrying, infrastructure and construction applications.

DF Capital

Powering growth

across the quarrying and construction equipment industry

Our tailored finance solutions help manufacturers and dealers **boost sales, enhance cash flow** and **unlock growth** through stock funding, asset finance and rental support.

NPS +59 in 2025*

At DF Capital, customer experience comes first.

*NPS is a customer experience metric that measures the likelihood of a customer recommending a company.

Inventory Finance
Stock funding that helps you sell more

Structured Finance
Short-term funding to support your ambitions

Asset Finance
Acquire essential equipment without upfront cost

Simple, flexible funding, backed by people who understand your business.

DF Capital's Dominic Gibbs would love to hear about your business and how we can support your plans.

Dominic Gibbs

Hillhead2026

We are exhibiting at Hillhead 2026

Please come and visit us on **Stand H18**

JCB's biggest ever X-Series to debut at Hillhead

JCB will unveil a host of new machines and technological developments at Hillhead 2026 – signalling continued investment in the quarrying, aggregates, and recycling sectors.

Taking centre stage on the stand will be the brand-new 520X crawler excavator, JCB's largest and most powerful X-Series machine to date. The 50-tonne-class excavator has been developed for heavy-duty applications and marks a major expansion of the company's Heavyline range.

It will be joined by its 40-tonne-class stablemate, the new 420X crawler excavator. Building on the success of the JCB 370X, the 420X has been designed to handle the most demanding applications, from mass excavation and aggregate extraction to demolition and crusher loading.

JCB will also showcase their expanding compaction equipment portfolio, featuring the new VM138D single-drum soil compactor, while the 9T Dual Drive site dumper will demonstrate the company's latest advances in site dumper productivity, visibility and site safety. Using technology similar to JCB's successful Dual Drive backhoe loader, the system allows the operator to rotate the seat and controls, so they always face the desired direction of travel.

The line-up of brand-new equipment will be completed with a preview of JCB's new 715 articulated dumptruck. This compact two-axle ADT delivers a 12,750kg payload and has been engineered for high productivity and fast cycle times in off-road hauling applications.

JCB will be showcasing the all-new 420X and 520X crawler excavators at the latest edition of Hillhead

Alongside the static display and live demonstrations, the JCB Aftersales team will be on the stand showcasing the latest developments in the JCB LiveLink system and the company's new Parts Online e-commerce platform, which provides anytime access to more than 50,000 genuine parts and attachments.

European premieres and global launches to feature on Astec stand

Astec Industries will showcase no fewer than eight new crushing, screening, washing, and material-handling innovations to improve productivity, efficiency, and operational performance for customers across the quarrying and recycling sectors.

Exhibiting on stands E11 and J11, the company will present a wide range of technologies developed specifically for the European market, with several machines operating live throughout the exhibition.

One of the headline introductions will be the European launch of the new Frontier tracked mobile crushing and screening range, engineered for rapid set-up, flexibility and high-performance production in demanding hard-rock applications. Astec will also launch the Kolberg Eco-Scrub modular washing solution, designed to deliver efficient wet-processing capabilities for semi-mobile operations.

Screening technology will be a key focus at the stand, including the Pioneer 6203LPV horizontal screen with Astec's patented Vari-Frequency technology, designed to reduce blinding and improve throughput.

Astec will use Hillhead 2026 as a European launch pad for their patented Multi-Frequency screening unit

Visitors will also see the European launch of the company's patented Multi-Frequency screen technology, proven across a range of challenging materials, including sticky aggregates, recycled asphalt planings (RAP), quarry scalpings, and topsoil.

Material-handling solutions will include the Telestack TCL 1031 Zero heavy-duty stacker and the global launch of the new Telestack LF527 low-feed hopper feeder, both designed to improve efficiency, minimize double-handling, and support high-tonnage applications.

Astec will also highlight their integrated end-to-end material-handling systems for pit-to-port and port-to-plant logistics operations, alongside the company's in-house Signal telematics platform, which provides operators with real-time machine performance data and simplified fleet maintenance management.

The company says its latest technologies have been developed to help operators increase throughput, improve product quality, and reduce operating costs, while also benefiting from enhanced local support through Astec's expanding European dealer and partner network. Support operations are backed by the company's parts inventory and an experienced team based in Omagh, Northern Ireland, as well as the wider global Astec organization.

Hillhead 2026 will also provide Astec with an opportunity to further strengthen relationships with customers and distribution partners, while showcasing one of the industry's most comprehensive portfolios of crushing, screening, washing, and material-handling equipment.

Through its extensive live demonstration programme and product launches, the US OEM aims to demonstrate how its latest innovations can help producers improve uptime, maximize efficiency, and deliver stronger long-term operational performance across quarrying, aggregates, and recycling applications.

Finlay to showcase new impactors and prototypes

Finlay's I-130RS impact crusher will be making its first public appearance at Hillhead 2026

Finlay will be exhibiting a wide range of crushers and screens at Hillhead 2026, including prototype previews and first public appearances of new impactors in both the demonstration and static display areas.

A key focus will be the newly launched impactor range, with the I-130RS impact crusher on static display, marking its first public appearance. Positioned between the I-120/I-120RS and the larger I-140/I-140RS, the new model addresses demand for a machine that delivers strong impact performance while being easier to transport and configure across a wide range of applications.

In the quarry demonstration area, Finlay will place strong emphasis on machines operating under live conditions, allowing visitors to assess performance on real materials and in real applications. Leading the working displays will be the 694 inclined screen, launched in 2025 and developed for high-production applications.

The machine features two full-size 6.1m x 1.53m (20ft x 5ft) top and middle decks and a 5.55m (18ft x 5ft) bottom deck, delivering efficient screening across quarrying, mining, sand and gravel, coal, woodchip and topsoil operations. Optional hybrid technology allows operation via external electrical power or the onboard engine.

Also running in the demonstration area will be the C-1540+ cone crusher prototype, previewed ahead of its planned launch for production in 2027. It features an upgraded cone chamber to improve materials processing performance and serviceability. The live demonstration line-up will be completed by the J-1170+ jaw crusher, which delivers high production capacity, large reduction ratios, and configurable operation for quarrying or construction and demolition recycling.

Finlay's static display will feature four machines, including several first public appearances. Alongside the I-130RS impact crusher, visitors will see the Finlay TC-60 stacker conveyor, the Finlay 883+ heavy-duty scalper, and the Finlay J-1280 jaw crusher with independent pre-screen, extended feeder and jack leg options, which will be shown publicly in the UK for the first time since its launch in 2025.

The stand will also feature a dedicated customer support area where visitors can access further information about Finlay's digital and support tools, including T-LINK, Finlay's telematics platform, and TRAC, a multi-sensor solution designed to improve the performance and durability of screening equipment. Powered by the digital platform INNEX, Finlay are focused on improving the end-user experience through consolidated tools and AI-driven capabilities.

EvoQuip celebrate 10 years of compact crushing, screening and innovation

This year's Hillhead exhibition marks a significant milestone for EvoQuip, commemorating 10 years since the brand's official launch at the show in 2016. EvoQuip made their debut at Hillhead with the Bison 120 jaw crusher, a compact machine designed to simplify crushing operations for smaller contractors and in recycling applications.

Since that launch, EvoQuip have steadily expanded their portfolio from a single jaw crusher to a broad range of compact equipment covering crushing, screening, shredding and conveying. Today, the EvoQuip line-up includes jaw and impact crushers, aggressive scalping screens, mobile conveyors and shredders, supporting small-scale materials processing across key industries, including construction, quarrying, recycling, and plant hire.

A trip down memory lane – EvoQuip officially made their debut at Hillhead 2016 with the Bison 120 jaw crusher

Barry O'Hare, EvoQuip's business line director, said: 'Launching EvoQuip at Hillhead in 2016 was about listening to customers who wanted compact equipment that was straightforward to own and operate.

'Ten years on, the portfolio has grown significantly, but that original focus on simplicity and practicality remains unchanged. Marking this anniversary at Hillhead will be a full-circle moment, given the role the show has played in the EvoQuip story from the very beginning.'

The EvoQuip presence at Hillhead 2026 will feature a new digital element, providing visitors with interactive access to product information, application insights, and a snapshot of the brand's global reach over the last 10 years.

Fuel-smart performance

XPower is an innovative machine concept which combines performance, fuel efficiency, robustness and comfort. With their power split driveline, XPower wheel loaders work with the greatest level of efficiency in all applications.

SANY UK to highlight extensive machinery range

SANY UK will return to Hillhead 2026 with a wide-ranging display of construction and quarrying equipment, highlighting the company's expanding UK presence and growing focus on electrification.

Leading the line-up will be the SY750 excavator, the largest machine on the stand, demonstrating SANY's capabilities in heavy-duty, high-output applications. Visitors will also be able to view a selection of excavators spanning multiple size classes, including the SY235, SY215E, SY155U and SY80U, alongside compact models such as the SY26C and SY10U.

Complementing the excavator range, SANY will showcase the STH936 telehandler and STR27C-10 roller, while the SW956E all-electric wheel loader will make its Hillhead debut as part of the company's expanding electric equipment portfolio.

The all-electric SW956E wheel loader from SANY

The display will feature a balanced mix of diesel and electric-powered machines, underlining SANY's commitment to combining proven performance with lower-emission solutions for modern construction and quarrying operations. The inclusion of electric equipment reflects growing demand from contractors and quarry operators for machinery that supports sustainability targets, reduces noise levels and lowers operating costs without compromising productivity.

SANY's stand will also highlight the company's continued investment in product development and machine technology, with a focus on operator comfort, efficiency and reliability across a broad range of applications. From compact urban construction projects to large-scale quarrying and earthmoving operations, the machines on display showcase the versatility of the SANY range.

Visitors to the stand will also be able to meet members of SANY UK's national dealer network to discuss machine applications, after-sales support and local service capabilities. Company representatives will be available throughout the show to provide guidance on machine specifications, financing options and customer support packages tailored to different operational requirements.

Hillhead 2026 will provide a platform for SANY UK to underline their continued growth strategy, supported by ongoing investment in products, dealer development and customer service infrastructure across the UK market.

Wirtgen at Hillhead 2026 – 'You'll never crush alone'

The Kleemann Mobicat MC 110 Evo2 excels at pre-crushing quarried stone and a wide range of recycled materials

Under the motto 'You'll never crush alone', the Wirtgen Group will present an integrated portfolio of materials processing and road construction solutions at the show, combining Kleemann crushing and screening technology with battery-electric roadbuilding systems and digital support tools.

On the materials processing side, Kleemann will showcase five crushers and screening plants. The Mobicat MC 110 Evo2 jaw crusher is designed for efficient pre-crushing of quarried stone and recycled materials, offering high throughput, integrated pre-screening and intuitive SPECTIVE control for ease of operation across varied applications.

The Mobirex MR 100 NEOe impact crusher will be paired with the Mobiscreen MSS 502 Evo screening plant, forming a compact, fully electric processing solution for demolition waste, concrete, reclaimed asphalt pavement and natural stone. With a dual-power option, both machines can also operate on an external electrical supply, reducing emissions and improving efficiency.

Kleemann's screening range is represented by the MSS 502 Evo, MSS 802 Evo and MSC 702 Evo. These versatile screens are designed for flexible use across different materials, offering adjustable settings, high process reliability and electric or dual-power drive concepts to support efficient, low-emission operation.

In road construction, Wirtgen will demonstrate a fully co-ordinated zero-emission production system comprising the W 50 Re cold-milling machine, the Super 1300-5e paver and the HX 70e tandem roller. This battery-electric fleet is designed to operate as a complete modular system, delivering fully electric, low-emission road rehabilitation on site.

Benninghoven will present the Multi Jet Burner, capable of operating with green hydrogen and providing CO_2-free asphalt production at mixing plants. In compaction, Hamm will display the HD 12 G VV tandem roller and HC 70i VIO compactor, offering flexible vibration and oscillation-based compaction solutions.

Beyond machinery, Wirtgen Group will highlight their digital and service capabilities, including SPECTIVE CONNECT, jobsite intelligence and smart automation systems. These technologies support operators with real-time performance data, machine optimization and process control. The company says the integration of connected technologies across crushing, screening and road building equipment is helping customers improve machine utilization, reduce fuel consumption, and simplify day-to-day site management.

The stand will also demonstrate how the Wirtgen Group's brands work together to provide complete workflow solutions, from material processing through to paving and compaction, supporting greater efficiency, sustainability and operational reliability across the construction cycle.

cabcare
THE NAME IN CAB PROTECTION

Vandal Guards & Demolition Guards for earth moving machinery

HANDRAILS

Safety Handrails 'Boxing Rings' For Extra Driver Safety

Cabcare Handrails or "Boxing Rings" are designed to meet current safety standards and protect the operator when working on the rear of the machine. They can be supplied as standard in Black or Safety Yellow in Steel or Yellow GRP Plastic.

Hillhead2026

Visit us on Stand B9

DEMOLITION GUARDS

FOPS Certified Demolition Guards Bolt-On Rock & Chassis Mounted

Cabcare FOPS Certified Demolition Guards, both chassis and cab mounted are designed and manufactured to exceed all current safety standards. Providing significant benefits over the OEM guards, front peak, skylight opening, removable front, easier front window cleaning and vandal guard fitting.

Vandal Guards offer peace of mind, lower insurance costs, less 'down-time' and are recommended by leading machine manufacturers

Hammerglass®

Hammerglass Guards delivers certified operator protection, improved visibility and reduced machine downtime in demanding working environments

- The RABS Window Guard (shown) provides FOPS Level II Certified protection as well as protection from smaller debris
- Existing window glass can be replaced with 4, 6, 8,12mm Hammerglass depending on the level of protection required.
- Scratch resistant and does not yellow or go opaque.

For more information about the CabCare product range: **Visit:** www.cabcare.com **Or Call:** 01785 851944

New Develon Series 9 excavators to make UK debut

Star attraction – the new Develon DX400HD-9 smart crawler excavator will make its UK debut at Hillhead 2026

The Develon stand at Hillhead 2026 will offer the first UK sighting of the company's new 37-tonne DX360LC-9 and 42-tonne DX400HD-9 smart crawler excavators. Part of the latest Series 9 range, the DX360LC-9 will operate in the demonstration area, showcasing Develon's E-Stop site safety technology at the quarry face at Hillhead.

The DX400HD-9 will be part of the static display on the Develon stand, alongside the new 23-tonne DX230LC-9 model. Together with the 26-tonne DX260LC-9, it completes the Series 9 smart crawler excavator line-up.

The new DX360LC-9 and DX400HD-9 expand the Series 9 smart crawler excavator range, introducing a platform built on full-electronic hydraulic (FEH) technology and integrated artificial intelligence. Powered by the Develon DX08V engine, delivering 227kW and 1,230 kgf/min of torque, the DX360LC-9 offers a maximum digging depth of 7,512mm and reach of 11,113mm. The DX400HD-9 uses the same engine architecture, producing 254kW and 1,460 kgf/min of torque, with identical digging parameters.

'This represents much more than simply adding to our next generation of excavators – it's about setting a new standard for the entire industry,' said Stephane Dieu, product manager for Develon excavators in Europe.

Develon have also enhanced their articulated dumptruck (ADT) range with an updated cab designed to maximize operator comfort, productivity, and jobsite safety. The new cab, displayed on the updated DA30-7 model, reflects Develon's belief that operator well-being is fundamental to machine efficiency and overall performance, delivering a working environment that supports operators throughout long, demanding shifts.

A key feature of the update is the new 12in touchscreen monitor, which provides intuitive access to machine information, settings, and camera views. The large display improves clarity and ease of use, allowing operators to make faster, more informed decisions during daily operations.

Develon now offer a range of three ADTs, comprising the DA30-7 and DA45-7 6x6 models, complemented by a new 4x4 version of the DA45-7. The DA30-7 and DA45-7 6x6 models have payloads of 28 tonnes and 41 tonnes, respectively, while the DA45-7 4x4 ADT is intended to compete with rigid dumptrucks (RDTs) in the 40-tonne class.

Develon's quarrying and construction machinery line-up will be further represented by the DL420CVT-7 wheel loader in the static display area, alongside the larger DL480-7 wheel loader in the demonstration area. These machines are two of the four largest standard models in Develon's DL-7 wheel loader range, which also includes the larger DL550-7 and DL580-7 models.

Designed for quarrying, construction and material handling applications, the DL420CVT-7 stands out for its continuously variable transmission, making it easy to operate and increasingly popular among aggregate plants for its optimal balance of power, efficiency and load capacity. With redesigned buckets offering up to 7% more capacity, these DL-7 wheel loaders provide easier, faster loading, with maximum bucket capacities of 4.5m^3 to 6.4m^3.

The static display will also feature the DD130-7 dozer, recently joined by the newly launched smaller DD100 model, thereby expanding Develon's dozer range on show. Also new for Hillhead 2026 will be the DX25Z-7 mini-excavator, which weighs 2,691kg and is powered by a Kubota D1305 Stage V engine producing 18.5kW. Designed for urban construction, landscaping and rental applications, it offers compact transportable dimensions for confined working environments.

SBM concrete plant first at leading UK quarry show

At this year's Hillhead exhibition, SBM Mineral Processing will showcase their latest mobile crushing, recycling, and concrete production solutions, underscoring the company's ongoing commitment to the UK and Irish markets.

Among the key machines on display will be SBM's flagship REMAX 600 track-mounted impact crusher and the 49-tonne JAWMAX 450 jaw crusher, both equipped with advanced hybrid electrified drive systems designed to deliver low emissions, high efficiency, and operational flexibility. SBM have also confirmed they will showcase their V-series vertical impact crushers, developed to deliver high-quality grain shape in demanding recycling applications.

For the first time at Hillhead, the Austrian OEM will present its mobile EUROMIX and semi-mobile DYNAMIX concrete mixing plants at the UK's leading quarry and construction plant exhibition.

SBM's EUROMIX 1600 NOVA mobile concrete batching plant

The plants offer production capacities ranging from 800m^3 to over 2,000m^3 per day. Built for quick set-up and reliable performance, they include precise dosing systems and twin-shaft mixing technology to deliver high-quality concrete for large-scale projects.

SBM will focus on the high-capacity EUROMIX 3300 SPACE model and the EUROMIX 1600 NOVA plant, introduced last year. The company will also promote the DYNAMIX 2500, which combines the flexibility of mobile plants with the performance of stationary mixing systems.

With efficient drive concepts, rapid set-up times, and a strong focus on practical on-site performance, SBM's Hillhead 2026 line-up demonstrates their continued commitment to delivering powerful, economical, and future-ready production technology for modern construction environments.

MAGNA set for first appearance at Hillhead 2026

The MT400C cone crusher delivers high output, large reduction ratios and consistent cubical product for aggregate producers and contractors

MAGNA, a Terex brand specializing in large-scale crushing, screening and conveying solutions, will make their Hillhead debut, exhibiting on stand L4 with the MT400C cone crusher and MT6S heavy-duty scalping screen.

Launched in 2024, the brand has already gained momentum through customer open days in Britain and the US, with Hillhead 2026 marking its first UK trade show appearance. The show will provide MAGNA with an opportunity to demonstrate the company's broader commitment to developing robust, high-capacity equipment for demanding large-scale operations.

Designed with serviceability, durability, and productivity in mind, the machines reflect the growing demand for efficient processing solutions that deliver consistent performance in quarrying and recycling environments.

Engineered for high output, large reduction ratios, and a consistent cubical product shape, the MT400C cone crusher features an 8m^3 hopper and feeder, automated metal detection, and a purge chute to protect the cone and minimize unplanned downtime.

The unit is also equipped with fully hydraulic closed-side setting adjustment with electronic monitoring, a fuel-efficient direct-drive system with a wet clutch, and a hydraulic tramp-relief system with automatic reset. Additional features include multiple liner configurations, cone overload protection, dust suppression, and MAGNA telemetry as standard.

Also on display, the MT6S scalping screen is designed for high-volume processing across quarrying, mining, construction and demolition, recycling, and aggregate applications. Capable of throughputs up to 800 tonnes/h, it can be fed by a crusher, an excavator, or a wheel loader.

The MT6S features a 6.1m x 1.8m top-deck screen and a 5.5m x 1.8m bottom-deck screen within a modular screenbox configuration. Hydraulic adjustment allows screen angles from 14–18°, while a 600mm lift at the discharge end improves access for media changes. All stockpiling conveyors include hydraulic angle adjustment and extendable head sections to maximize discharge height and stockpile capacity.

Commenting ahead of the company's Hillhead debut, Neil McIlwaine, business line director at MAGNA, said: 'Following a very strong response to the MT130J mobile jaw crusher, our flagship machine at Conexpo, Hillhead is an important next step for the brand. It gives us the opportunity to introduce the MT400C and MT6S machines to customers, and to showcase the scale, build quality, and focus on output and reliability that underpin the MAGNA range.'

MB Crusher to demonstrate full on-site processing

At Hillhead MB Crusher will bring their equipment to life with live demonstrations that showcase real-world performance across the three core sectors that define the show – quarrying, construction and waste-recycling.

Operating globally across these sectors, MB Crusher will go beyond a static display at Hillhead 2026, giving visitors the opportunity to see their specialized machinery attachments in action under genuine site conditions.

A key highlight will be the MB demolition pulverizer, launched in 2025 and designed for primary and secondary demolition, material downsizing, and rebar separation. Suitable for excavators from 1.5 to 25 tonnes, both the compact and heavy lines will be featured, with selected units operating live on site.

Double impact – a pair of MB-PT650 demolition pulverizers in operation

In the newly named East Demonstration Area of the Hillhead showground, MB Crusher will demonstrate a complete material-processing workflow using three attachments mounted on a single excavator. This set-up allows operators to process demolition waste into reusable aggregate without additional machinery.

The demonstration includes the demolition pulverizer for reinforced concrete applications, a crusher bucket for processing material directly on site, and a screening bucket for fast separation of inert materials by size. Together, these solutions highlight the flexibility and scalability of MB Crusher technology across different machine sizes and jobsite requirements.

With all products available for immediate delivery across the UK, MB Crusher continue to respond to growing demand for efficient, on-site material processing solutions.

Bruce to debut Mob-E-Wash mobile washing system

Bruce Materials Processing Solutions will present the Mob-E-Wash, offering visitors a close-up look at the company's latest mobile washing technology. Designed to improve efficiency, maximize material recovery and simplify modern processing operations, the unit provides a flexible alternative to traditional static systems.

Developed for a wide range of applications, the Mob-E-Wash plant is suited to campaign washing, short- and long-term projects, and multi-site operations. Its compact, mobile design delivers a level of flexibility that static installations cannot match, allowing operators to respond quickly to changing project requirements and varying material demands.

Mounted on a tri-axle chassis, the wash plant is engineered for rapid deployment, providing fast installation and reduced downtime between projects. Its transport-friendly design also supports straightforward integration into existing processing operations, helping operators increase productivity without extensive site preparation or permanent infrastructure.

Bruce's latest mobile washing solution – the Mob-E-Wash

The fully electric Mob-E-Wash delivers a complete washing solution, incorporating scrubbing, organics and trash removal, and sizing and classification of multiple feed materials. A strong emphasis has also been placed on safe operation and ease of maintenance to ensure the machine remains practical and user-friendly in demanding quarrying, recycling and aggregate applications.

Operation is simplified by a plug-and-play human-machine interface (HMI) control system with power-safe connectivity, allowing operators to quickly and efficiently monitor and manage key functions.

Hardox wear parts are fitted as standard throughout the plant to improve durability and extend service life in abrasive operating environments. The compact layout also allows excellent access for servicing and routine maintenance, helping reduce downtime and support long-term reliability.

According to Bruce Materials Processing Solutions, the Mob-E-Wash reflects the growing demand for adaptable, high-efficiency washing systems that support modern mobile processing operations while maintaining strong material recovery and operational flexibility.

Powerscreen to celebrate 60 years of mobile screening evolution

The Powerscreen Premiertrak R450 jaw crusher in operation

Powerscreen will celebrate their 60th anniversary at Hillhead 2026 alongside long-standing UK distributor Blue Group, linking the pioneering origins of mobile screening in the 1960s with today's advanced processing solutions.

Exhibiting from an expanded stand, a major attraction will be the fully restored MK1 screening unit – the original machine that launched the Powerscreen brand and helped establish the concept of mobile screening in the 1960s.

Visitors will be able to explore the machine's history and restoration through archive material and video content, while a hall of fame induction ceremony will recognise individuals who have contributed to the brand's development over the past six decades.

Alongside the heritage display, Powerscreen will present a selection of current equipment, including the Chieftain 2200 triple-deck screen, the largest inclined screen in the company's portfolio. Designed for high-output applications requiring consistent, high-specification material, the machine features a patented configurable drive system and dual-screenbox design to maximize efficiency across a wide range of screening duties.

Also on display will be the Premiertrak R450 jaw crusher, developed for quarrying, demolition, recycling, and mining applications. Available with an independent pre-screen option, the machine is designed to improve throughput, reduce wear, and enhance final product quality when processing high-fines material.

Visitors will also get an early look at the next stage of Powerscreen's product development through a prototype of the new 1000X Maxtrak cone crusher, which forms part of the wider display.

Beyond the equipment itself, the stand will highlight the wider technology and support solutions available through Powerscreen and Blue Group. These include TRAC, a multi-sensor system designed to improve screening performance and machine durability, and INNEX, a new digital platform incorporating integrated tools and AI-driven capabilities to enhance the end-user experience.

'Reaching a 60-year milestone brings the focus back to what has always mattered at Powerscreen,' said Sean Loughran, business line director. 'Strong machine design, effective support, and long-standing relationships remain central to the business, alongside continual innovation to enhance the end-user experience and deliver a strong return on investment.

'Hillhead allows us to acknowledge that history and to thank distributors such as Blue Group, as well as those inducted into our hall of fame, for their role in supporting customers and the brand's global growth.'

Finning focusing on smart technology and digital solutions

Finning will help customers innovate and streamline operations through Caterpillar's cutting-edge digital solutions and integrated support packages

At this year's Hillhead show, Finning UK & Ireland will guide visitors through Caterpillar's digital tools and smart technologies that are driving on-site operational improvements. Designed as an interactive experience, the Finning stand will lead visitors through specific zones addressing major operational challenges, such as boosting productivity, optimizing processes, managing the equipment lifecycle, and providing support.

Company specialists will also be on hand during the show to explain how data-driven technology and strategic support services can enhance site performance and reduce operating costs.

Finning continue to support customers through integrated solutions that combine advanced machine technology, data analytics, operator training and equipment management services. The company says these solutions are increasingly helping businesses make more informed decisions on safety, productivity, machine utilization, and sustainability.

Mick Knight, head of corporate and strategic accounts at Finning UK & Ireland, commented: 'Connecting our customers to the tools that allow their businesses to thrive is very important to us, whether that is using technology to unlock the data they need to improve safety, sustainability and productivity, or opening up new, cost-effective ways to invest in machinery through rebuilt solutions.'

He added that Hillhead provides an ideal opportunity to engage directly with customers and address the industry's most significant challenges, including decarbonization, operational efficiency, and skills development.

Mr Knight said: 'The Finning Caterpillar experience will be a fun, interactive way to consider how to develop and improve performance across the whole business. By combining technology, data, expertise and long-term lifecycle thinking, we can help customers improve safety, upskill teams and streamline operations for maximum efficiency.'

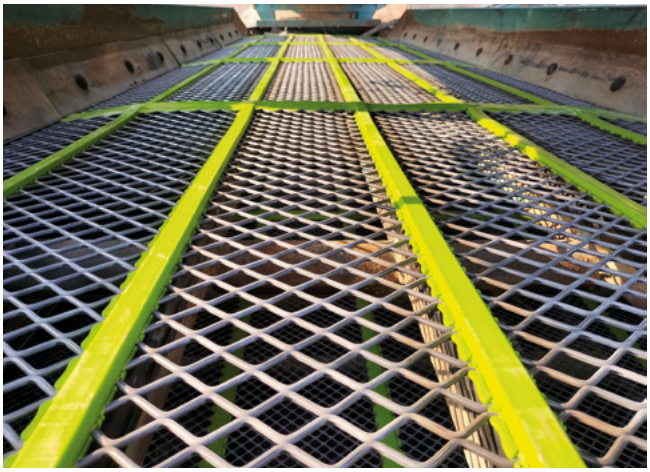
Finning say the tools, products and services on display have been developed to help customers make smarter operational decisions both on and off site, while supporting long-term business resilience and competitiveness.

Advanced screen media solutions from MAJOR

At this year's Hillhead exhibition, MAJOR will showcase their range of high-performance screen media solutions, including FLEX-MAT screen media and woven-wire screens, designed to improve screening efficiency, reduce blinding and pegging, and increase throughput in demanding quarrying and mining applications.

Among the technologies on display will be MAJOR's FLEX-MAT modular screen media, engineered to deliver high open area, efficient stratification, and resistance to blinding and pegging, even in demanding screening environments. Available in multiple configurations, including the D, S and T series, the modular system can be adapted to suit a wide range of material types and operating conditions.

The company will also present FLEX-MAT tensioned screen media, which incorporates lime-green polyurethane strips, allowing each wire to vibrate independently from hook to hook. This design improves material stratification and screening efficiency while reducing pegging and maintenance requirements. The system is available in both side- and end-tensioned configurations, with options including side seals, overlaps and crown deck adapters.



MAJOR's FLEX-MAT tensioned screen media vibrates independently from hook to hook, improving material stratification and screening efficiency

In addition, MAJOR will showcase their woven-wire screens featuring OPTIMUMWIRE technology. Engineered with tightly controlled crimps and precise weave patterns, the screens are designed to deliver longer wear life, improved durability and more consistent screening performance across a variety of applications.

'Hillhead gives quarry and mining operators the chance to have direct conversations with our team about how to move more material through their screening process with less blinding and pegging,' said Mike Offermans, director of European sales and market development at MAJOR.

He added that MAJOR's recent European expansion through their partnership with Haver & Boecker Niagara has strengthened local support and improved access to tailored screening solutions across the UK and Ireland. According to the company, the collaboration is helping streamline support and response times while addressing the specific operational challenges faced by European producers.

Matej Grm, MAJOR's European territory manager, explained: 'European quarries and mines are under constant pressure to increase throughput without raising maintenance costs. At Hillhead, our focus is on identifying screen media solutions that deliver measurable value for customers and address the specific challenges of their operations.'

THE CRUSHING EVOLUTION

Merlo bring diverse construction line-up to Hillhead

Merlo's confirmed Hillhead machinery line-up highlights their advanced materials-handling solutions

At Hillhead 2026, Merlo will showcase a broad selection of construction-focused materials-handling equipment, highlighting the engineering, versatility and operator-focused design behind the company's telehandler and tracked carrier ranges. Developed for a wide range of site applications, the machines on display place strong emphasis on comfort, safety and productivity.

Among the machines featured will be the popular P27.6 PLUS compact telehandler, offering a 2.7-tonne lift capacity and 5.9m lift height. Powered by a 75hp Kohler engine with hydrostatic transmission, the machine combines compact dimensions with excellent manoeuvrability, making it well-suited to confined working environments. Operator comfort is enhanced by Merlo's full-size cab design, which provides excellent visibility and a 180° door opening.

Merlo will also display the stabilized P40.13 and P40.17PLUS telehandlers, both offering 4-tonne lift capacities with front-mounted stabilizers, chassis levelling and boom side-shift for accurate load placement. The P40.17PLUS offers greater lift height, a more powerful 116hp engine, higher travel speeds, and the ASCS LCD digital display system, supporting demanding construction applications where precision and productivity are critical.

For heavy-duty lifting, the P120.10 HM telehandler delivers a 12-tonne lift capacity and 10m reach. Equipped with CVT transmission, flow-sharing hydraulics and Merlo's Advanced Stability Control System (ASCS), the machine continuously monitors operating parameters to optimize stability and lifting safety, while an in-cab LCD display provides machine status and operator feedback.

The company will also showcase a special-livery ROTO 50.26 SPLUS rotating telehandler. Powered by a 170hp Stage V engine, the machine offers a 5-tonne lift capacity and 26m reach, with 360° load positioning for maximum versatility. Features include dual hydraulic pumps, automatic stabilizer management, tilting cab and radio remote-control operation for improved visibility and precision during lifting tasks.

Completing the line-up is the Cingo M700TD High Tip tracked carrier, designed for efficient material handling in confined and restricted-access areas. With a carrying capacity of up to 700kg and compact width of around 750mm, the machine combines manoeuvrability with strong traction and low ground pressure, making it suitable for construction and landscaping applications.

Powered by a 12hp Honda GX390 Stage V petrol engine, it delivers reliable performance, with a hydraulic transmission and precise control that ensure smooth operation on uneven terrain and gradients. The High Tip configuration offers easy loading into skips, trailers and hoppers, enhancing on-site efficiency, while the robust rubber track system ensures low ground pressure and excellent traction.

Dynamic Screening Systems debut the DYNAMIC X7

Dynamic Screening Systems (DSS) will showcase their latest machine, the DYNAMIC X7, at Hillhead 2026. Built around proven 10G screening technology, the X7 delivers high G-force performance, integrated mobility, high throughput and reduced operating costs, all within a compact, transportable design.

Developed to meet current market demands while allowing for future adaptability, the machine is designed for a wide range of challenging screening applications. The self-contained unit features onboard power and feeder systems with hydraulically folding conveyors and walkways to simplify transport and improve access for service and maintenance.

The DYNAMIC X7 offers high G-force screening, mobility, high throughput and lower costs in a compact, transportable design

Designed for flexibility and demanding site conditions, the DYNAMIC X7 is suited to applications including recycled aggregates, coal, incinerator bottom ash (IBA), steel foundry slag, quarry scalping waste, automotive shredder residue (ASR), construction and demolition fines, and muck-away waste.

Established in 2015 by directors Martin Eves and Patrick O'Toole, DSS develop advanced screening and separation technologies for extreme screening applications.

Their patented 10G Force technology was first introduced through the SST Screen (+2mm separation) for coarse screening and the MST Screen for micron screening (–2mm separation). Both platforms are now available in a range of configurations to suit customer requirements. The latest addition to the portfolio – the DYNAMIC X7 fully tracked mobile screening machine – further expands DSS's capabilities in high-performance mobile screening.

Focused on the recovery and repurposing of valuable resources, the company continues to expand its global presence and is actively developing an international dealer network to support growing demand for its innovative screening solutions.

McHale Plant to exhibit latest Komatsu Equipment

McHale Plant Sales will introduce a range of new-generation Komatsu machines to the UK and Irish markets, strengthening their wheel loader, articulated dumptruck (ADT) and intelligent excavator offerings.

Among the headline machines on display will be the new Komatsu HM460-6 articulated dumptruck, representing the latest development of the HM400 platform. Powered by a newly developed Komatsu engine and transmission combination, the machine delivers a 22% improvement in fuel efficiency, reduced emissions, and lower operating costs. Increased body capacity and a suite of smart operating features, including cruise control, hill-start assist, and semi-automatic dumping, are designed to improve productivity and operator comfort.

The HM460-6 also benefits from a redesigned cab with improved visibility, ergonomic controls, a larger operator environment and enhanced safety systems, including rollover prevention technology and machine inclination monitoring.

The next-generation Komatsu HM460-6 ADT

McHale Plant will also showcase the new Komatsu WA475-11 and WA485-11 wheel loaders, both featuring Komatsu's next-generation hydro-mechanical transmission (HMT) and a newly developed high-torque engine. The WA485-11 delivers up to 29% improved fuel efficiency compared with its predecessor, alongside increased payload and bucket capacity. An optimized Z-bar linkage further improves lifting performance and loading productivity.

Both wheel loaders are equipped with EU Stage V-compliant emissions technology and extended service intervals designed to reduce lifecycle costs and improve operating efficiency.

Another key machine on display will be the Komatsu PC220LCi-12 intelligent excavator, combining digital integration with improved fuel economy and productivity. Powered by a next-generation 129kW engine, the excavator delivers an 18% reduction in fuel consumption compared with the previous model, while an upgraded hydraulic system increases digging forces and overall performance.

The machine also incorporates Komatsu's intelligent machine control technology, alongside a redesigned cab offering improved visibility, greater legroom and enhanced operator comfort. Features include an 8in touchscreen monitor, customizable hydraulic settings and operator ID functionality allowing personalized settings for multiple users.

Also featured on the stand will be the new 13-tonne Komatsu PC130-11E0 excavator, designed for utility work, smaller construction projects, and rental applications. The machine combines a fuel-efficient Stage V engine with enhanced operator comfort, advanced telematics, and multiple hydraulic circuit options to support a wide range of attachments.

Heavy-duty conveyor solutions in focus for Smiley Monroe

Smiley Monroe will return to Hillhead 2026 to showcase their latest range of conveyor belt innovations designed to maximize uptime, improve productivity, and reduce operational costs for operators across the quarrying, recycling, and construction sectors.

Exhibiting on stand E5 at the UK's leading working quarry exhibition, the company will highlight a portfolio of heavy-duty belting solutions engineered to perform in some of the world's toughest operating environments.

Among the key products on display will be the ZIP CLIP ready-to-fit replacement belt system, developed to reduce downtime by eliminating the need for vulcanizing and providing rapid installation. Designed with ease of maintenance in mind, the system allows operators to quickly replace damaged belts and get equipment back up and running in as little as 1h.

Also taking centre stage will be the TOUGHFLEX conveyor belt range, Smiley Monroe's heavy-duty solution for demanding conveying applications. Engineered for durability and long service life, the belts are designed to withstand harsh operating conditions while helping operators reduce maintenance requirements and improve overall machine performance.

The company will additionally showcase its INTEGRACLEAT custom cleated belts, manufactured with integrally moulded profiles to deliver efficient and reliable material handling across a broad range of industrial applications.

Alongside their product offering, Smiley Monroe will use Hillhead 2026 to highlight the continued growth of their GB operations through the company's Midlands Hub in Ilkeston, Derbyshire. Established in response to increasing customer demand for faster service and improved product availability, the facility supports customers across Britain through increased stockholding, next-day delivery, and same-day collection.

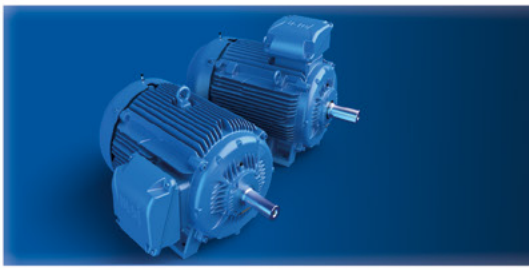
Chris Monroe, chief executive officer of Smiley Monroe, commented: 'Great Britain has always been an important market for us. Our customers wanted faster access to the products they need, and the Midlands Hub allows us to respond quickly and efficiently.'

Smiley Monroe's ZIP CLIP replacement belt can be safely self-installed in under 1h with no specialist training

Supplying conveyor belt solutions to industries including crushing and screening, recycling, agriculture, road construction and environmental operation, Smiley Monroe continue to focus on delivering durable, dependable, productivity-focused solutions backed by proven field performance.

Driving efficiency and sustainability

Solutions for the QUARRY & AGGREGATES Industry



Designed for the rigours of quarrying and aggregates, WEG's WG50 and WG20 geared motors deliver proven torque, durability and uptime where continuous operation is critical.

The NEW W22 IE4 / IE5 Prime motor sets a new benchmark for efficiency, helping operators reduce energy consumption and operating costs without compromising power or reliability suitable for DOL and VSD operation with a 3 year warranty as standard.

For applications demanding high efficiency and precise control, the W23sync+ IE5 / IE6 motor brings synchronous performance to conveyors, crushers and screens.

From extraction to processing, WEG offers a complete motion drive portfolio engineered to maximise productivity, reliability and lifecycle value.

Digital blasting innovations drive EPC-UK Hillhead showcase

EPC-UK will use Hillhead 2026 to showcase their latest technology-led solutions to improve blast performance and deliver greater value to customers. Central to the company's offering will be its upgraded EXPERTIR blast-design software, a key component of EPC's growing digital ecosystem. The platform supports engineers in planning and executing safer, more efficient and optimized blasts, delivering greater precision and control across operations.

Originally developed from a long-established application by EPC Groupe's technical manager, Dr Ricardo Chavez, EXPERTIR has been fully rewritten in a modern, future-proof programming language to improve performance and scalability.

The upgraded platform now integrates data from laser and photogrammetry models, creating accurate drilling and loading plans. It supports basic and advanced delay sequences, aiding engineers in vibration control and precise blast outcomes.

EPC-UK will bring intelligent blasting solutions, including their upgraded EXPERTIR blast-design software, to Hillhead 2026

Also featured will be EPC-UK's bespoke ROG+ (Rock-on-Ground Plus) service, alongside a suite of customized software and hardware solutions that fully digitalize advanced blast analysis processes.

The ROG+ service brings EPC-UK engineers into close collaboration with customers to unlock additional value from their blasting operations. Using a continuous digital feedback loop, blast performance is measured through site data, engineering expertise and bespoke data dashboards.

This provides real-time insight into how blasting activity affects downstream quarry processes and the performance and value of the extracted material, supporting ongoing optimization and improved operational efficiency.

The company will also announce a multi-million-pound investment in a new UK booster factory to produce high-quality pressed TNT boosters. This reinforces EPC-UK's commitment to innovation, supply security, and future explosives solutions.

RKX Rock Extraction to premiere electric-driven breaker

RKX Rock Extraction Ltd will make their show debut at Hillhead 2026 with the launch of the RKX-Volt 100k – a new electric rock breaker designed to offer a high-performance alternative to conventional drilling and blasting.

The RKX-Volt 100k will make its first worldwide appearance at the Buxton exhibition. It has been engineered for quarrying, construction and recycling applications, where precision extraction, reduced environmental impact, and operational flexibility are increasingly important.

Powered by cutting-edge British-developed electric drive technology from YASA, a wholly owned subsidiary of Mercedes-Benz Group, the RKX-Volt 100k breaker is designed to replace or complement traditional blasting methods in applications where vibration, dust, noise or regulatory restrictions pose operational challenges.

Weighing approximately three tonnes, the breaker is compatible with 20-tonne-class excavator carriers and delivers a single-strike impact force of up to 100,000 joules of breaking energy, with operating rates of up to 20 strikes per minute. The electrically driven system has also been designed to minimize shock loading on both the breaker and carrier machines, thereby enhancing durability and reducing wear.

According to the company, the RKX-Volt 100k offers a combination of high-impact breaking performance and environmentally focused operation, producing significantly lower levels of noise, vibration and dust compared with conventional rock extraction methods. The electric breaker also offers integrated telemetry and data collection, allowing operators to monitor performance and operational data in real time.

The RKX-Volt 100k has been developed to address the growing demand for more sustainable and controllable rock-breaking solutions, particularly in urban, environmentally sensitive, and highly regulated working environments where blasting may not be practical or permitted.

The RKX-Volt 100k electric breaker delivers high-precision rock extraction with less noise, vibration and environmental impact

Hillhead 2026 will provide visitors with the first opportunity to see the RKX-Volt 100k in action, as RKX Rock Extraction introduce their latest electric rock-breaking technology to the global quarrying and construction industries.

Resilience, collaboration and the future of our industry

This month sees the biennial Hillhead event return, offering our members a great opportunity to visit the show and stay abreast of the latest advances in the technology and equipment that support our industry. It is also a great opportunity for us, as individuals, to catch up with colleagues and friends and share our experiences, successes, and challenges. That network of trusted peers is a critical part of what makes our industry so special and why it is such a great sector to join and build a career in. For me, at this moment, this is the key message we need to share as often as we can.

This message will be loud and clear at the Hillhead show, where the IQ will continue to engage with and promote opportunities to the next generation of talent through the Minerals Matter school visit programme on Thursday 25 June. The programme gives young people the chance to see and understand the careers our industry offers.

The IQ team will be at the show and look forward to meeting members to discuss how we can support their professional development, alongside our partner organizations. Now more than ever, in a challenging economic climate, we must remain competitive and collaborative to maintain core standards across all disciplines in our sector.

This collaboration was evident at the recent Institute of Asphalt Technology's (IAT) 60th anniversary dinner and conference last month, which I had the pleasure and honour of attending. The conference theme, 'Resilience in Action', reminded us of the need to be prepared for challenges in the short, medium and long term, particularly in human capital, where I was proud to represent our industry's challenges in an open forum.

Our relationship with the IAT and other stakeholders reinforces the importance of working together to support all parts of our sector, deliver value to our respective members, and attract and retain talent. Sharing these common themes, while remaining focused on our respective areas, helps build resilience more effectively.

I passionately believe that – in a fast-changing world with rapid technological developments – the role of the Institute is becoming ever more important in balancing and harnessing these advancements alongside our core experience and professional knowledge. Our sector is critical to the UK economy, even if this is not always fully recognized within government, and the success of our industry will always depend on the people within it. I am proud not only of our history of supporting the industry over the past 100 years, but also of how we are helping to drive it forward in uncertain times.

In my role as President of the Institute, I look forward to catching up with as many of you as possible at the Hillhead show.

Ben Williams

Supporting the Industry through Collaborations

Membership organizations The Institute of Quarrying (IQ) and the Mineral Products Qualifications Council (MPQC) will exhibit together at this year's Hillhead on stand PA2 in the Showground Pavilion.

Underlining their collaborative commitment to the mineral products sector, they will demonstrate key updates to standards, along with new training and qualification opportunities, to help build a more resilient, skilled, and future-ready mineral products sector.

James Thorne, joint chief executive officer of the IQ and MPQC, explained: 'Hillhead gives us a terrific opportunity to demonstrate our collective resources to individuals and businesses in our sector. This includes: how we effectively deliver continuous professional development and training; how we collaborate with other organizations on health and safety; how we use consolidated data and its interpretation to inform action, developing industry-leading data insights via MP Connect; and our commitment to future skills, inspiring the next generation by enabling a group of schoolchildren to experience Hillhead and our superb sector firsthand.'

Strategic Safety Forum to reveal updated National Occupational Standards

The Strategic Safety Forum (SSF) comprises IQ, MPQC, the British Aggregates Association, the Mineral Products Association, and QNJAC – key sector organizations working together for the good of the industry and to deliver a common purpose. As a collaborative forum, SSF spans the 'aggregates, asphalt, cement, concrete, precast and masonry, dimension stone, lime, mortar, and industrial sand industries' across the UK.

SSF's attendance at Hillhead will include a major update to the National Occupational Standards (NOS) for quarry managers and supervisors, marking a significant, industry-led step towards strengthening competence, consistency, and professionalism. Reflecting modern working practices and evolving regulatory expectations, the updated NOS will now serve as the sector-wide benchmark for competence, underpinning training, vocational qualifications, and continuing professional development.

Developed through a collaborative process involving operators, training providers, awarding bodies and professional institutions, the standards form part of a wider roadmap that has reviewed existing safety, health and environmental frameworks, identified future skills needs and considered ongoing technological and regulatory change. Support from groups such as the Quarrying National Joint Advisory Committee (QNJAC) will continue to guide

implementation and ensure the standards remain relevant.

The revised NOS define the skills, knowledge and behaviours required for competent performance and support compliance with the Quarries Regulations 1999. Key enhancements include clearer expectations for accountability, a stronger focus on leadership and decision-making, greater emphasis on proactive risk management, and greater integration of health, safety, and well-being. They also better reflect modern operational practices and promote greater consistency across the sector.

A more structured set of core capabilities now underpins the standards, including developing team competence, managing health and safety, improving production, leading continuous improvement, addressing environmental responsibilities, and managing geotechnical risks. While some roles may require additional specialist skills, the updated NOS clarify and strengthen existing expectations rather than introducing entirely new ones.

The changes are intended to support more aligned training pathways, stronger links between roles and qualifications, and clearer guidance for ongoing CPD. Work is already under way to ensure that vocational qualifications reflect the updated standards and remain accessible, relevant, and future-focused.

Importantly, the sector recognizes existing qualifications and experience, and the updated NOS are designed to build on current competence rather than replace it. Any additional development is expected to be proportionate and supported by targeted training or CPD. The standards also reinforce the need to maintain competence over time, requiring continuous development in response to evolving industry demands.

For employers, the updated NOS present an opportunity to review and strengthen competence management systems, align roles and training, and improve overall performance. Their successful implementation will depend on continued industry-wide collaboration to embed consistent standards and share good practice.

Mr Thorne commented: 'The updated NOS provide a clear, modern framework for competence in the quarrying sector. Their impact will depend on how effectively they are adopted in practice, helping to enhance safety, support workforce development, and ensure the industry remains resilient and prepared for the future.'

IQ extends professional development for members

The Institute of Quarrying will showcase its membership, including the CPD Select Series, which offers flexible, on-demand access to accredited training. Delivered via IQ's e-learning platform, the series allows learners to complete individual units, bundles, or tailored packages at their own pace on any device.

The options include:

- Self-Select – allowing individuals to choose relevant topics, such as geology, health and safety, and crushing
- IQ Select – bundles that group key subjects for broader, cost-effective learning
- Employer Select – supporting organizations by delivering bespoke training packages to meet workforce development and CPD needs.

New for this year, IQ members can also expect exclusive free access to five online CPD units, covering the following topics:

- Awareness of Comms and Leadership
- SHE Fundamentals
- Biodiversity and Geodiversity
- Natural Capital and Net Zero
- Sustainable Materials.

The units will be released throughout the year, providing members with essential knowledge whilst supporting their CPD.

The IQ team will be available at Hillhead to talk about online learning and how to access it, showcase their varied qualifications and course catalogue, and reinforce the value of IQ membership.

Diploma in Surface Mining Explosives Engineering

IQ, together with partners EPC-UK and the University of Derby, have created a diploma for professionals working in surface mining explosives engineering. Delivered over 12 months through a blended-learning approach, the Diploma in Surface Mining Engineering is tailored to meet the evolving professional development needs of the explosives products and services industry.

It aims to enhance competence, professionalism, and environmental management while promoting a zero-incident safety culture. It covers key topics such as rock mechanics, fragmentation, vibration control, environmental considerations, and risk assessment, and emphasizes best practice and the responsible use of explosives.

Aimed at quarry managers, engineers, and blasting personnel, the diploma supports career progression by demonstrating technical competence and a commitment to industry standards in surface extraction operations.

MP Connect to demonstrate platform for drivers, contractors and companies

Laura Mountjoy, general manager at MP Connect, said: 'We have seen substantial growth and industry validation for the MP Connect platform over the last two years. Our app and smart card are widely recognized as an effective aid to safety and site inductions, helping to reduce on-site risk by proving that anyone working on a quarry site, whether as a driver or a contractor, is suitably qualified.'

MP Connect can be managed easily at ➤

the weighbridge or remotely via the app's geofencing capabilities. Its use is mandatory for access to many UK sites and is endorsed by other industry bodies, including the Mineral Products Association (MPA). Visitors will also have the opportunity to view demonstrations of MP Connect for companies; a cost-effective assurance tool designed for businesses.

'MP Connect's data insights can help businesses make more informed decisions by providing real-time information, identifying trends and highlighting opportunities. Rather than relying on reactive responses, the platform allows businesses to take a more proactive approach through intelligent, data-driven insights,' said Ms Mountjoy.

Suite of new plant training standards to be introduced

At stand PA2, MP Awards will announce new training standards for heavy plant training to be delivered by accredited training providers. They will also provide specific training content for commonly used plant vehicles.

John Clark, general manager at MP Awards, said: 'These new training standards, developed through industry consultation, will create much-needed consistency in plant operators' competency. They will enhance safety, provide measurable records of training, and offer a clear pathway for operators to develop their skills and careers.'

Minerals Matter to showcase sector to students

For the third consecutive Hillhead, young people from a local school will engage with five other exhibitors to gain valuable insight into career pathways, technology, sustainability, and operational processes.

Tarmac will engage with the students through several of their early-years colleagues, fielding questions and explaining the routes, skill sets, and qualifications needed to work in the sector.

Wirtgen Group will show students their crushing and processing machines and explain the processes in detail. SMT GB's digital experience will demonstrate how technology and innovative solutions are vital to the sector.

CDE Group will explain how their waste-management and recycling equipment enhances sustainability for operators.

EPC-UK will offer students hands-on experience with replica inert explosive products, providing an entertaining overview of drilling and blasting.

Hannah Higley, future careers manager at Minerals Matter, said: 'We are extremely grateful to the businesses who go above and beyond, despite their busy schedules, to give the students a really engaging experience. This type of outreach to education is so meaningful, providing the opportunity to showcase the diversity of skills, opportunities and world-class companies that help make up the minerals product sector.'

MP Skills to offer new vehicle-specific driver CPC courses and 'competent operator development scheme'

Exhibiting at Hillhead on stand PA8, MPQC's training division, MP Skills, will showcase and take bookings for the new vehicle-specific driver certificate of professional competence (CPC) courses for tippers, tankers, and truckmixers. Developed in collaboration with the sector and the MPA Transport Committee, the courses will replace the Site Safety Awareness course.

Neil Peacock, general manager of MP Skills, said: 'These new vehicle-specific programmes ensure operators receive training directly relevant to the equipment they use every day. By tailoring the learning experience to individual vehicle types, we can further strengthen safety culture across the sector and support higher operational standards and competency.'

Dave Hart, chair of the MPA Transport Committee, added: 'The MPA Transport Committee is pleased to have collaborated with MP Skills to introduce these new vehicle-specific safety courses, which reflect our shared commitment to raising standards, supporting competence across the sector, and ensuring that everyone working in the mineral products industry returns home safely every day.'

MP Skills will also offer industry courses, plant scheme assessments and vocational qualifications. In addition, information will be provided on the recently introduced Level 2 and Level 3 Heavy Clay Technology Association (HCTa) courses, with the opportunity to join this September's cohorts. The competent operator development scheme is a 12-month programme that serves as an alternative development route for all businesses and for devolved nations without access to levy funding for apprenticeships.

A body of important work and support

Mr Thorne concluded: 'Hillhead is the key date in the calendar for the mineral products sector. It offers our membership organizations the opportunity to demonstrate the wide range of work that IQ, the IQ branch network and MPQC undertake every day. This work provides a bedrock of support for the real-world needs of individuals and companies.' **QM**

Make the world
move forward*

SNR®
Brand of NTN Group

Bearing life more than doubled, grease consumption reduced by more than half

In quarries, every minute counts.
Unplanned stoppages, dust, impacts: where other bearings fail, ROX keeps on turning. Thanks to its patented metal deflectors, ROX pushes the boundaries of reliability: more than double the service life, lubrication reduced by more than 50%, and improved productivity. Designed and manufactured in Europe, ROX is the heavy metal bearing that protects and unleashes the full potential of your installations.
No longer do you have to choose between robustness and performance. Demand both.

*ROX, born for the dust.

Supporting the Next Generation of Construction Professionals

The construction and quarrying sectors are evolving rapidly. Alongside the drive towards lower-carbon operations and digital transformation, the industry continues to face long-term challenges linked to skills shortages, workforce demographics, safety performance, and social mobility. Addressing these challenges requires sustained focus on people, clear development pathways, and a culture that supports continuous learning.

With around 5,000 employees across more than 350 sites in the UK, Tarmac play a significant role in supplying sustainable construction and building materials nationwide. Beyond its operational footprint, the business is focused on developing a diverse, multi-skilled and digitally capable workforce prepared for the demands of modern construction.

Supporting skills development and capability

A key element of Tarmac's approach is to provide structured progression routes across logistics, operations and leadership roles. By combining apprenticeships, professional development programmes and ongoing learning opportunities, the company aims to create long-term careers rather than short-term roles.

Apprenticeships are central to this strategy. They allow individuals to gain nationally recognized qualifications while applying their skills in real-world work environments. This blend of technical training and practical experience supports both personal development and operational resilience.

Structured learning frameworks, digital modules, and leadership programmes help ensure consistent standards and behaviours across the business. In an industry where safety, compliance, and quality are essential, this focus on development directly contributes to performance and sustainability.

Supporting early careers from day one

Recognizing early-career talent is critical to the future of businesses and the wider industry. Apprentices, graduates and trainees bring fresh perspectives, digital skills and long-term potential at a time when the sector must attract new generations of professionals.

From the moment individuals join the business, the aim is to empower them to work, earn, learn and grow. Early-career colleagues are supported not only through formal training and qualifications, but

also through a culture that prioritizes inclusion, well-being and engagement.

The company's commitment extends beyond technical learning. It focuses on creating an environment where people feel welcome, supported and motivated to contribute. Structured onboarding, mentoring opportunities and access to development resources help build confidence and capability from the outset.

An early-careers community plays an active role across the organization, driving innovation and operational improvement. By investing in apprenticeships and graduate pathways, the business is helping to build a strong pipeline of future leaders and specialists essential to the industry's long-term success.

Creating opportunities for progression

Beyond entry-level programmes, there is a strong emphasis on career progression. Clear development pathways help employees understand how to build skills over time and progress into supervisory or management roles.

Skills matrices, e-learning modules and leadership development programmes promote transparency in progression. This approach benefits individuals by providing structure and direction, while strengthening succession planning and workforce continuity within the business.

By embedding development into everyday operations, Tarmac aim to ensure that capability grows alongside experience, helping people to progress within the organization and across the wider industry.

A commitment to safety and continuous improvement

Safety remains fundamental to Tarmac's operations. The company's broader health and safety approach spans site management, supply chain partnerships and fleet innovation, ensuring that safety considerations are integrated across all activities.

Training and behavioural development are central to reinforcing safe practices. By embedding safety awareness in onboarding and professional training, ➤

the organization helps ensure employees understand their responsibilities and feel confident making informed decisions.

Working in collaboration with industry experts and organizations promotes continuous improvement in safety standards. Mental health and well-being are also integral to this commitment, recognizing that a truly safe workplace supports both physical and psychological health.

Tarmac's National Skills and Safety Park supports these wider objectives by providing a dedicated environment for operational training and professional development. It allows employees to gain practical experience and build confidence in a controlled setting, thereby improving consistency and competence across the business.

Supporting the armed forces community

Tarmac have strengthened their commitment to inclusive employment through their support for the armed forces community. The business has been awarded Silver status in the Defence Employer Recognition Scheme, recognizing its ongoing commitment to veterans, reservists, service leavers and their families.

The award reflects a pledge to the Armed Forces Covenant, which aims to ensure that those who serve or have served in the armed forces are treated fairly and supported in the workplace. This includes creating meaningful career pathways for those transitioning to civilian employment and supporting reserve forces members.

Working closely with armed forces organizations promotes employment opportunities and highlights the transferable skills gained through military experience. Leadership, teamwork, resilience, adaptability, and a strong commitment to safety closely align with the construction and materials sector.

The company has introduced measures to support reservists, ensuring they receive appropriate flexibility for their training commitments. This approach balances operational requirements with personal responsibilities and demonstrates respect for the contributions of those who serve.

As Suzie Batson, national talent acquisition manager at Tarmac, noted, veterans, reservists and cadet force volunteers make a valuable contribution to the industry. Supporting them is part of the organization's broader commitment to inclusion and workforce development.

Supporting sustainability and future skills

As the construction industry moves towards lower-carbon solutions and greater digital integration, workforce capability must continue to evolve. Tarmac's strategy focuses on digitally enhanced operations and continuous improvement towards net zero.

Training initiatives across logistics, operations and leadership encourage employees to consider efficiency, sustainability and responsible resource management in their daily work. By aligning skills development with environmental objectives, the business embeds sustainability in operational decision making.

Looking ahead

The challenges facing the construction sector are significant, including demographic pressures, skills shortages, sustainability demands and regional inequalities. Addressing these issues requires collaboration, investment, and long-term thinking.

Through structured apprenticeships, early-career programmes, inclusive recruitment initiatives, and ongoing professional development, Tarmac are helping to build a skilled, diverse, and future-ready workforce.

By empowering people from day one, supporting progression at every stage, and recognizing the value of diverse experiences, including those of the armed forces community, the company is helping to strengthen its own operations and the wider construction industry. In doing so, it is demonstrating that investment in people is central to building a safer, more sustainable, and more inclusive future for construction. **QM**

Market uncertainty and declining production continue to create challenges for asphalt producers/suppliers and long-term infrastructure investors

The Changing Position of the Asphalt Industry in Great Britain

The asphalt market in Great Britain (mid-2026) remains within a sustained period of structural decline. Demand for road repairs, constrained by local authority budgets and rising operational costs, continues to intensify, creating a growing disconnect between infrastructure needs and market demand across the country. The uncertainty and misalignment between need and demand create pressure for asphalt producers, aggregate suppliers, recycling operators and long-term investors striving to support the highways sector across Great Britain.

Asphalt, a mixture of aggregates (crushed rock, sand and gravel) bound together by bitumen, is a highly viscous, durable material widely used in construction, primarily for paving roads, highways, airport runways and car parking areas. It offers adhesive and waterproof properties, with advantages including noise reduction, cost-effectiveness, recyclability and sustainability. Asphalt is among the most recycled construction materials in the world, with reclaimed asphalt pavement (RAP) helping to conserve resources and reduce environmental impact.

For several years, the asphalt industry has faced mounting challenges amid declining production. Cost pressures, combined with general construction slowdowns, continued to push up operational and financial costs in 2023. By 2024, in response to these escalating issues, the market began investing time and effort to reduce production costs through new techniques and the use of recycled materials.

In 2025, demand for asphalt remained subdued; however, infrastructure requirements across Great Britain continued to rise, contributing to a growing backlog of road maintenance and repair works. Recent findings from the ALARM Survey 2026 (prepared by the Asphalt Industry Alliance) reinforce the severity of the ongoing issue, identifying a carriageway repair backlog exceeding £18 billion across England and Wales.

In 2026, asphalt producers and the Government are attempting to balance two competing realities – infrastructure needs and market demand. Producers are continuing to manage declining demand and tighter margins, whilst the Government is providing increased funding support, specifically for the asphalt and highways sector in Great Britain.

Alongside financial support – driven by the need to address record levels of road repair backlogs and a push for net-zero infrastructure – the Government has realigned accountability for highway funding to local authorities. Funding is to be used directly for road maintenance and/or pothole repair.

Under new measures introduced in 2026, £525 million of the £1.6 billion allocated to local road maintenance (2026/27) could be withheld from local authorities if they cannot demonstrate expenditure on road repair schemes. The Department for Transport has also introduced a new performance rating system and peer review support for underperforming authorities to provide councils with guidance on highway maintenance service delivery and operations.

Whilst the asphalt market in Great Britain is struggling to keep pace with infrastructure deterioration and funding levels continue to fall significantly short of what is required, the sector is being pushed towards rapid innovation, decarbonization, and alternative maintenance approaches to deliver more cost-effective and sustainable solutions.

Local authorities

In the short term, local authorities are being compelled to prioritize emergency maintenance over long-term resurfacing investment to meet growing road repair needs. The number of roads continues to expand across Great Britain, and as existing roads deteriorate faster than authorities can repair them, there is a clear realignment of efforts towards temporary repair methods.

This changing approach is accelerating innovation across the asphalt market, with several asphalt producers investing time and effort in potential sustainable and cost-effective alternatives, whilst councils are experimenting with alternative binders, recycled-content materials and lower-carbon repair technologies, in addition to investing in in-house alternative pothole repair operations.

Approaches such as utilizing cold-lay asphalt materials and alternative patching techniques may offer short-term cost savings; however, they also raise longer-term concerns about material durability and lifecycle performance, whilst creating uncertainty over future demand for traditional asphalt supply.

Asphalt producers

Asphalt demand will remain under pressure amid wider market uncertainty. Producers now need to identify opportunities in an increasingly fragmented, financially constrained market to ensure their growth and development.

Sustainable materials, recycled content, low-carbon production, and specialist maintenance solutions are likely to attract greater investment and market focus over the coming years, with the expectation of a wider portfolio of asphalt-based materials entering the market for varying durations and uses.

Highway contractors

Asphalt is used by highway contractors to maintain, construct and resurface road networks. Roads are built in layers, with asphalt compacted to form a smooth, joint-free, skid-resistant surface. The decline in asphalt sales, reduced funding, and the cancellation of road schemes significantly affect highway contractors by limiting opportunities, altering timelines and causing project delays.

The AIA's latest ALARM survey report highlights a growing carriageway repair backlog across England and Wales – estimated to exceed £18 billion

Weak demand leads contractors to seek alternative, less profitable projects, including smaller-scale road schemes, reactive maintenance or pothole repair programmes. Rising material costs and inflation also encourage highway contractors to consider transitioning to new, less-proven sustainable alternative materials rather than traditional asphalt.

With any new material comes the need to invest time and effort to understand how to use it and the appropriate equipment for the material. All these factors generate additional cost and training time that will need to be absorbed by the highway contractors.

Aggregate producers

Annual reductions in asphalt production and market realignment towards sustainable asphalt alternatives and cost efficiency will undoubtedly affect other construction material markets across Great Britain. Aggregates (primary and recycled) are key materials in asphalt production, and thus a decline in asphalt demand will directly affect the production and use of crushed rock, sand and gravel, and recycled aggregates.

In line with declining annual asphalt production figures, BDS report that aggregate annual volumes have also weakened in similar years. In 2024, a 1.3% annual decline was noted compared with the previous year, with land-won sand and gravel experiencing the greatest production decline of 6.8%.

As the asphalt and aggregates sectors continue to evolve under funding ➤

Asphalt annual volumes in Great Britain

BDS annually report on asphalt production across Great Britain, with findings suggesting that asphalt output has been steadily declining, in line with (1) reduced funded activity; (2) delays and reductions in resurfacing programmes, or the replacement of resurfacing schemes with reactive pothole repair strategies; and (3) inflationary pressures, energy costs, and labour shortages.

In 2023, demand for asphalt peaked since the 2008 recession, with annual volumes at 26 million tonnes. In 2024, annual volumes declined, driven by delays to key infrastructure projects, particularly road schemes managed by National Highways, and by reductions in associated government funding. In 2025 and into early 2026, the asphalt market has begun to evolve, with steady growth driven by heavy infrastructure spending and relentless demand for road maintenance. Sustainable trends, including recycled asphalt, warm-mix technologies, and advanced binders, are now gaining traction, alongside the rising popularity of cold-mix asphalt for its improved sustainability and lower emissions.

RAP materials are helping asphalt producers reduce waste, conserve natural resources and lower the environmental impact of road construction

pressures, sustainability targets, and operational change, businesses that understand the market will be best placed to identify opportunities and maintain long-term resilience. The future of the asphalt market includes tighter margins, a reassessment of understanding and needs, the creation of opportunities that offer commercial advantage, and environmentally focused approaches alongside new materials.

As a market leader in construction materials consultancy and research, BDS provide the aggregates, asphalt and wider mineral products sectors with detailed, independent and up-to-date intelligence on market performance, production trends, planning activity and operational movements across Great Britain. BDS maintain one of the industry's most comprehensive databases, covering asphalt plants, pits and quarries, recycled aggregate operations, concrete plants and waste facilities throughout Great Britain.

Using knowledge gathered over 40 years, BDS track every asphalt plant and production facility, along with annual output volumes, operational changes, ownership movements, and regional market trends, to provide clients with a detailed understanding of market development, evolution, and emerging trends.

Supporting the market, BDS also deliver extensive planning and consultancy support to operators, investors and local authorities. With decades of experience analysing mineral reserves, planning policy, site performance and market need, BDS offer clients guidance on navigating increasingly complex planning environments surrounding asphalt, aggregates and recycling, whilst also assisting clients by strengthening planning applications through the demonstration of material need or by reviewing localized material outputs and reserves.

Visitors seeking to better understand the rapidly changing landscape of construction materials, gain industry insight, or access market intelligence to support strategic decision-making are invited to speak with the BDS team on Stand PC17 at Hillhead 2026. The company will be available throughout the show to discuss the quarrying, construction, and recycling materials markets, as well as related business requirements. **QM**

1st Containers
N16

1st Containers are a leading nationwide supplier of high-quality shipping containers, supporting the quarrying, construction, and recycling industries with robust, site-ready infrastructure solutions. With over 100 years of combined expertise, the company understands the importance of reliable on-site storage and operational efficiency, offering solutions designed to keep projects moving. Its range includes heavy-duty storage units from 6ft to 45ft, ideal for securing tools, plant equipment, and PPE in demanding environments. Beyond storage, 1st Containers provide bespoke site conversions, delivering offices, canteens, drying rooms, and welfare facilities tailored to individual site requirements. Supported by strategically located depots, the company offers rapid nationwide deployment and end-to-end service, managing everything from initial specification through to final delivery to site, quarry, or facility.

Amber Valley Developments LLP
B8
Amber Valley are one of Europe's largest manufacturers of reversing and safety equipment, with a growing portfolio of UK-manufactured solutions. In recent years, the company has expanded into a broad range of LED lighting products, including LED striplights, PIR interior lights, LED cyclist warning lamps, and bespoke lighting systems tailored to specific applications. Its product range also includes high-quality LED beacons available in multiple sizes, colours, and fitments. In addition, Amber Valley's Site Minder system is designed to enhance safety during hydraulic machine operation, particularly on tracked vehicles with 360° rotating cabs, helping operators maintain awareness of forward and reverse movement when working near ground personnel.

Ammann UK Ltd
N7
Ammann will showcase their latest asphalt plant, compaction, and paving technologies at Hillhead 2026, highlighting solutions designed to support lower emissions, greater recycling capacity, and more sustainable production processes. With a strong global presence, Ammann continue to focus on advanced plant technology, zero-waste processes and energy-efficient equipment for the asphalt and concrete sectors. Visitors to the Ammann stand will be able to explore a range of plant solutions, including new product introductions such as an electric asphalt paver, an all-electric roller and battery-powered light compaction equipment. The company will also present its digital management systems and connectivity solutions, designed to

improve operational efficiency, reduce maintenance requirements, and support healthier, more productive jobsites.

Anaconda Equipment
J4
Anaconda Equipment design and manufacture mobile processing equipment for demanding applications, including aggregates, industrial sands, C&D waste, compost, topsoil and mining materials. The company's product range includes tracked jaw and impact crushers, scalpers, screeners, trommels and conveyors, all engineered for reliability, mobility and ease of operation. Known for robust construction and high uptime, Anaconda machines are widely used by contractors and producers seeking dependable performance in challenging environments. Supported by a strong global dealer network, the company also provides technical support, spare parts availability and ongoing training, reinforcing its reputation for quality, innovation and high-value mobile processing solutions.

Antifriction Components
PD24
Established in 1976, Antifriction Components have built a strong reputation as a leading UK supplier of high-quality bearings, power transmission components, and fluid power products. The company supports customers across a wide range of industries, helping to improve profitability through innovative, cost-effective solutions. Its extensive portfolio includes premium bearings, efficient power transmission systems, and advanced fluid power technologies, all designed to meet the demands of modern industrial applications. Backed by decades of expertise, Antifriction combine technical knowledge with a strong focus on customer service, delivering reliable, tailored support to meet specific operational requirements. With a clear emphasis on maximizing uptime and improving energy efficiency, the company continues to help businesses enhance performance and drive long-term operational success.

AP Air Europe Ltd
RF1
Leading air-conditioning specialists AP Air provide next day delivery on OEM and aftermarket spares for 110 construction machinery manufacturers. Denso, Sanden, SPAL and Burgaflex are just some of the quality brands that the company stocks, along with a comprehensive range of tools and consumables for R134a and YF systems. As the UK distributor for Oksys and CTR charging stations, AP Air stock a range of machines and offer a comprehensive service, including installation, servicing, and repairs. The company also delivers air-conditioning training courses, including F-gas training, at its City & Guilds-approved centre in Gloucestershire or on-site at customers' premises. AP Air also supply automatic lubrication systems, including Hebonilube grease pumps and kits.

APM (Autopak Machinery)
RD2

Autopak Machinery Ltd (APM), part of the Autopack Limited Group, deliver high-performance automated packing solutions for demanding quarrying and bulk-material environments. With over 30 years' experience, the company supports producers of aggregates, sand, limestone and recycled materials with robust systems engineered to improve efficiency and reduce labour dependency. At Hillhead, the AP-4000 Integral Air Packer will be featured. Designed to enhance packing line performance through automated, high-throughput operation, it is built for abrasive and dusty environments and integrates easily with existing systems to support consistent, accurate filling and improved productivity. Key benefits include reduced labour requirements, consistent product quality, scalable automation and improved operational efficiency, helping operators increase output without adding headcount.

Ashtree Vision & Safety Ltd
B1

Ashtree Vision & Safety help eliminate blind spots on the toughest quarry and construction sites, where dust, vibration, and adverse weather conditions constantly challenge operator visibility. With over 45 years of manufacturing expertise, Bradford-based Ashtree supply heavy-duty safety solutions for loading shovels, telehandlers, and excavators, supporting safer, more efficient site operations. The company’s S1300 range features impact-resistant, shatterproof mirrors with reinforced mounting arms, engineered to withstand the harsh vibration and debris common in quarry environments. Electronic systems include waterproof, hardwired monitors and wireless reversing cameras that provide reliable 360° awareness. Ashtree also offer high-intensity LED scene lighting and multi-frequency white-noise reversing alarms, ensuring machines are both seen and heard across busy work areas, thereby improving overall site safety.

ATG are a supply-chain partner to OEMs, delivering a wide range of products, including castings

ATG Conveyors

PA1

ATG Conveyors are a specialist supplier of high-performance conveyor components and bulk handling solutions for the quarrying, mining, recycling, and heavy industrial sectors. Leveraging ATG's extensive global sourcing capabilities, the business combines engineering expertise with robust, field-proven products designed to operate in the most demanding environments. ATG Conveyor's product range includes conveyor rollers, idlers, motorized pulleys, drums, belting, and other associated components – all manufactured to stringent quality standards and supported by comprehensive technical documentation. The company also collaborates closely with customers to ensure correct specifications, durability, and reliability, whether for new installations, upgrades, or ongoing maintenance programmes.

Global House, Unit 11 Nottingham South & Wilford Industrial Estate, Nottingham NG11 7EP; (0115) 773 4770; mail@atg-global.com; www.atg-conveyors.com

ATG Ltd

N19

ATG are a trusted supply-chain partner to OEMs and equipment manufacturers worldwide, delivering fully qualified parts, verified suppliers and end-to-end sourcing solutions Operating across sectors such as construction equipment, quarrying, crushing and screening, material handling and heavy engineering, ATG help manufacturers secure reliable components that meet strict engineering and quality standards. The company's role goes far beyond traditional trading. ATG manage structured sourcing programmes that include supplier identification, engineering validation, quality assurance and global logistics.

ATG works with a network of carefully selected manufacturing partners, all of whom undergo a rigorous qualification process to ensure consistent quality and production capability. Supporting this is ATG's engineering-led approach, with experienced technical teams working directly with suppliers to oversee production, conduct audits and ensure parts meet specification. From prototype qualification through to production, shipping, and final delivery, ATG manages the entire supply chain. This integrated model provides OEMs with greater visibility, reduced sourcing risk and dependable delivery.

Atherton Material Handling Ltd

PA1

Forged from more than 50 years of material handling expertise, Atherton Material Handling (AMH) and Atherton Conveyor Spares (ACS) combine engineering capability, manufacturing strength and critical component supply into a single, integrated delivery model. Together, the businesses provide end-to-end conveyor solutions for heavy industry, covering system design, structural engineering, manufacture, installation, commissioning and long-term operational support. While AMH deliver full conveyor system projects, ACS supply precision drum manufacturing, high-performance rollers, conveyor spares and essential components, ensuring reliable performance and reduced downtime across all installations. Serving the quarrying, mining, aggregates and heavy industrial sectors, Atherton offer a single, accountable partner focused on keeping material handling systems operating safely, efficiently and at maximum output.

Atlas Copco Power Technique
H21
Atlas Copco's Power Technique division delivers smart, portable air, power and flow solutions designed for the toughest environments, showcased during Hillhead. Its focus on portability means every product is engineered to be lighter, smaller and easier to move without compromising on performance. Across construction, quarrying, tough industrial applications and drilling, Power Technique helps customers work more efficiently, sustainably and safely. Its portfolio includes electric, battery-powered, and diesel mobile compressors; electric submersible and diesel surface dewatering pumps; diesel/hybrid generators with BESS; handheld pneumatic, hydraulic, and petrol driven tools; and a full range of LED, electric, and battery-powered light towers. Every product is built for reliability in demanding conditions, delivering low emissions, low noise and reduced cost of ownership.

Whether you require a compressor optimized for transport, a durable pump for heavy dewatering, reliable temporary power, or efficient lighting for remote locations, Power Technique offers a comprehensive, ready-to-deploy solution, supported by parts, service, fluids, connectivity, and long-lasting performance.

AVT Reliability
RD18
AVT Reliability will showcase their asset reliability, condition monitoring and reliability engineering solutions, helping operators improve plant performance and reduce unplanned downtime. Serving the quarrying, construction, aggregates and recycling sectors, AVT deliver services including vibration analysis, remote condition monitoring, lubrication management, reliability consultancy and training. These

services help maintenance teams move from reactive maintenance towards a more predictive, performance-focused approach.

A key focus will be Machine Sentry, the company's cloud-based condition monitoring platform, which combines fixed and mobile data collection with asset health trending and diagnostic support. Suitable for individual assets or entire sites, it provides clearer visibility of equipment condition to support better maintenance planning. AVT will also highlight their wider reliability services, including structural and pipework vibration analysis, asset integrity programmes and engineering support designed to improve operational efficiency and reduce the risk of downtime.

Bay-Lynx Manufacturing Inc Ltd

M5

Bay-Lynx are a family-run business supplying volumetric mixing and material delivery equipment to operators across the UK. Built on long-standing relationships and practical engineering, the company focuses on delivering equipment that performs reliably in real-world conditions, backed by support customers can depend on. Best known for the Titan volumetric mixer range, including the Titan screed mixer, Bay-Lynx design machines that offer operators complete control, flexibility, and consistent on-site production. Manufactured using premium materials such as Hardox steel, Titan mixers are engineered for durability, precision, and long service life. Alongside its volumetric solutions, the company supplies and supports the Frumecar drum mixer range, providing a dependable option for traditional ready-mix delivery and fleet expansion. This extensive product range allows Bay-Lynx to support a diverse array of businesses and operating models within the concrete and materials sector. With locations in both the north and south of the UK, Bay-Lynx provide nationwide sales, service, parts, and engineering support.

BDS Market Intelligence

PC17

Established in 1989, BDS Marketing Research (QMJ) Ltd are the leading independent consulting firm specializing in marketing and market research within the heavy building materials and waste sectors. The work of BDS is divided into three key areas – planning, reporting, and consultancy. Planning – BDS monitor and report on all planning applications across all counties in Great Britain, Northern Ireland, and the Republic of Ireland. BDS identify and report on planning applications that have been submitted, consented, withdrawn, or refused within various industry sectors, including minerals, asphalt plants and related schemes, concrete, cementitious and mortar schemes, waste-management schemes, and onshore renewable energy schemes. Reporting – every year BDS publish a portfolio of publicly available industry reports providing estimated volumes and market shares across key markets. These include aggregates (primary and recycled), asphalt, ready-mixed concrete, concrete products, and cement. In addition, it publishes individual specialist surveys, sector reviews and analysis on a periodic basis. Consultancy – BDS undertake bespoke research projects for individual clients on a confidential basis. These include commercial due diligence, market analysis, pricing, competitor analysis, new product development, and other market research.

Becool Radiators / Gallay Ltd
PA17
Becool Radiators/Gallay are a UK-based manufacturer with a long-established reputation for designing, manufacturing and supplying cooling and heating systems worldwide. Operating from a modern facility in Wellingborough and part of the wider G&M Group, the company combines advanced computer-aided design with proven engineering expertise to deliver compact, robust and reliable solutions. Its core product range includes engine water radiators, oil coolers, charge air coolers, fuel coolers, and complete air conditioning and heating systems. A full suite of auxiliary components, including fans, hoses, tanks, and motors, offers fully integrated cooling packages tailored to specific applications. Serving a diverse customer base, Becool Radiators/Gallay primarily supply to OEMs across sectors, including engine manufacturing, on- and off-highway vehicles, military equipment, construction, materials handling, rail and static power applications such as pumps, compressors, and generators.

BES Group Asset Reliability
PC64
British Engineering Services Asset Reliability are a leading provider of reliability and condition-based maintenance solutions for key industries. The company supports organisations in moving from reactive maintenance to data-driven strategies that improve operational efficiency, extend asset life and reduce operating costs. Its comprehensive condition-monitoring portfolio includes vibration analysis, thermography, ultrasonics, motor current analysis and online monitoring systems, providing real-time insight into asset health. This enables early fault detection and more informed maintenance decisions. Capabilities are further enhanced by specialist oil and lubrication services, including oil analysis, contamination control, lubrication surveys, lubricant optimisation and filtration solutions. Furthermore, the company distributes advanced reliability technologies, including SKF RecondOil systems, Hofmann auto-balancers, and Emerson solutions. This allows them to offer comprehensive reliability packages that include monitoring, analytics, and oil regeneration.

Best-Chem – a division of Assured Solutions
PC3
Best-Chem supply advanced dust suppression solutions for the quarrying, mining and construction sectors, helping operators create safer and more productive working environments. With extensive industry experience, the company delivers a complete service covering site surveys, system design, installation, commissioning, servicing and maintenance. Best-Chem are particularly recognized for their foam dust-suppression systems, designed to maximize dust capture while optimizing resource use in demanding applications. The company's portfolio also includes high-pressure misting systems, automated sprinkler systems, rail wagon and stockpile sealants, road dust suppressants and bespoke application systems. Best-Chem also offer Crete-Away+, a biodegradable solution for removing concrete from plant, vehicles, tools and equipment.

Blaker Group Ltd
C5
BlakerTech are a UK-based specialist in metal recycling and separation technology, delivering engineered systems designed for durability, efficiency, and measurable recovery performance. As part of the long-established Blaker Group Ltd, the business is built on decades of hands-on metal processing experience. This operational background gives BlakerTech a clear understanding of real plant conditions, including material characteristics, throughput requirements, system integration, ongoing support and a site's performance goals. The company applies its expertise to develop practical, plant-focused separation systems that are robust, user-friendly, and optimized for maximum metal recovery. Each solution is shaped by real-world processing knowledge, helping customers maximize the value and profitability of the materials they handle. From initial concept and technical evaluation through to manufacture, installation, and commissioning, BlakerTech provide comprehensive engineering support at every stage.

Blast Log Ltd
PA7
Blast Log offer a comprehensive range of consultancy services tailored for the quarrying, mining and construction sectors, specializing in blasting, vibration, and air-overpressure management. Blast Log combine the expertise of experienced blasting consultants with forward-thinking engineers to deliver advanced, research-led solutions for the industry. The company develops state-of-the-art monitoring technologies and applies the latest techniques to meet a wide range of client requirements. Its capabilities cover vibration and air overpressure monitoring, bespoke system design, and the installation of specialist monitoring equipment. Blast Log also support optimizing electronic detonator timing to minimize vibration impacts with their Blast Log System – an essential tool for proactive blast design and effective vibration management. The company will also highlight its FM 301 blasting seismograph, underlining its continued commitment to innovation in monitoring technology.

Bradley Pulverizer Enterprises
PD38
Founded in 1886, Bradley Pulverizer design, manufacture, and supply air-classifying and pulverizing systems for the fine and semi-fine grinding of hard, friable, and abrasive materials. The company's pendulum roller mills are widely trusted for delivering consistent, uninterrupted production and meeting demanding particle-size specifications, with outputs ranging from less than 1–150 tonnes/h. These systems can achieve uniform particle sizes from 50% passing 150 microns to 99.9% passing 30 microns in a single pass. Bradley's air-classifiers provide instant adjustment of particle separation sizes and can be integrated into existing mill systems, while standalone units deliver simultaneous separation of coarse and fine particles.

Cabcare
B9
Cabcare are a leading UK manufacturer of vandal guards, handrails and FOPS-certified demolition and forestry protection systems for construction, demolition and forestry machinery. Their FOPS-certified cab and chassis-mounted demolition guards are designed to exceed current safety standards, offering enhanced operator protection alongside practical benefits such as an improved front peak design, skylight opening options, removable front sections, easier access for window cleaning, and simplified guard fitting compared with OEM solutions. Cabcare handrails, or 'boxing rings', are engineered to meet current safety requirements and provide additional operator protection when working on the rear of machines. They are available in steel or yellow GRP and supplied in black or safety yellow finishes. The company is also the official UK supplier of Hammerglass safety glass and guard systems, offering FOPS Level II protection solutions, replacement front window units, and unbreakable glass options in 4mm, 6mm, 8mm and 12mm thicknesses for a wide range of machine applications.
Unit 20, Raleigh Hall Industrial Estate, Eccleshall, Stafford ST21 6JL; (01785) 851944; sales@cabcare.com; www.cabcare.com

Cabragh Engineering
E18
Cabragh Engineering design and manufacture high-quality equipment for the concrete, quarrying and recycling industries worldwide. Their systems are developed with a focus on reliability, efficiency and rapid installation, delivering strong performance across demanding applications. Specializing in bespoke engineering projects, Cabragh work closely with customers to develop tailored solutions that meet specific operational requirements. The company's product range includes mobile and static wet and dry batching plants, mobile and vertical silos, crushing and screening plants, aggregate conveyors, blending bin units, storage bins and block moulds.
20 Farriter Road, Dungannon BT70 1TL; (028) 8776 9326; info@cabragheng.com; www.cabragheng.com

Calatherm Ltd
PA43
Calatherm are a specialist in bespoke thermal management solutions, with more than 80 years of experience in engineering, design, and manufacturing. Founded in 1939, the company serves the on-highway and off-highway sectors with tailored heating and cooling systems. Combining innovation with a solutions-focused approach, Calatherm deliver systems ranging from retrofit solutions for legacy vehicles to advanced thermal technologies for new electric and hydrogen-powered platforms. Known for its reliability and performance, the company continues to support customers with forward-thinking solutions at the forefront of industry development.

Camfaud Concrete Pumps Ltd
CE2
Camfaud Concrete Pumps will showcase their latest innovation, the TB130 Telebelt. As one of the UK's leading concrete pumping specialists, Camfaud are recognized for delivering safe, reliable, and efficient concrete placement solutions across major infrastructure, commercial, and residential projects. The TB130 Telebelt represents next-generation material placement technology, offering exceptional reach, versatility and productivity for handling concrete, aggregates, sand and other granular materials in demanding site conditions. It is ideally suited to large pours, tunnel works, rail projects and restricted-access sites, providing a faster, safer and more cost-effective alternative to traditional methods.
High Road, Thornwood Common, Epping CM16 6LU; (01992) 560898; sales@camfaud.co.uk; www.camfaud.co.uk

Carbon8Lighting
RA5
Carbon8Lighting will showcase the new T3 Light Ranger – a super-bright, battery-powered mobile lighting tower that delivers diesel-equivalent performance at a fraction of the cost. Compact and highly portable, the T3 Light Ranger fits in a hatchback and weighs just 48kg, including the battery. Designed for one-person deployment, the unit can be quickly positioned exactly where illumination is needed on site. Advanced battery technology delivers up to 40h of runtime on a single charge, with a full recharge time of approximately 5h. The system can also be charged in situ, including during operation, while a 110/240V charger offers fast multi-battery charging and rapid swap-out capability. With ultra-low running costs, silent operation and zero emissions, the T3 Light Ranger removes many of the limitations associated with diesel-powered lighting towers. Its efficiency and flexibility have already led to adoption across major organizations, including BAM UK & Ireland and Warner Bros., with Gap Group adding the unit to its national hire fleet.

CC Jensen Ltd
RB23
C.C. JENSEN are a global leader in oil maintenance, with more than 70 years of experience in the design and manufacture of CJC offline oil filtration solutions. These systems remove particles, water, acidity, and degradation products from hydraulic oils, lubricants, gear oils, and fuels. By ensuring clean, dry oil, CJC filters help improve equipment reliability, increase uptime, and extend both component and oil life – delivering significant maintenance cost savings while reducing environmental impact through lower waste oil volumes. Research indicates that up to 80% of oil-related failures are caused by contamination, making preventive oil maintenance a critical factor in maintaining optimal performance and avoiding costly system breakdowns.
Unit 26 Enterprise City, Meadowfield Avenue, Spennymoor, Co. Durham DL16 6JF; (01388) 420721; filtration@cjcuk.co.uk; www.cjc.dk

CDE
A11
CDE are a global leader in wet-processing solutions, with more than 2,000 projects delivered over the last 30 years across five strategic regions. The company provides solutions for a wide range of materials and applications, helping operators transform waste into valuable resources while supporting the transition to a circular economy. At Hillhead 2026, CDE will showcase the ProPress X4 filter press, following its launch at Hillhead 2024. Designed to improve operational efficiency for materials producers, the ProPress X4 combines advanced design with high-performance dewatering technology to support more efficient, sustainable processing.

CFlo World Ltd

PA46

CFlo World are a leading innovator in modular wet-processing technologies, delivering bespoke equipment solutions across waste-recycling, upcycling mining waste, ore beneficiation, and critical mineral recovery. With 18 years of expertise and operations in 17 countries, CFlo promote sustainable alternatives to natural sand by transforming construction and demolition waste and mine waste into engineered sand and other building materials for the circular economy. The business also enhances the value of mined ores and critical minerals for high-tech industries such as electric vehicle batteries, solar energy, and advanced manufacturing. With more than 475 successful installations worldwide, CFlo are driving a global shift towards sustainable alternatives to natural sand. Through its B2B platform, Doctor Sand, the company is also working to establish India's first national sand brand while improving the sand supply chain's structure and efficiency.

Concrete Canvas Ltd
PA42

Concrete Canvas produce four award-winning products based on their core material technology. The company's Concrete Canvas range includes flexible, concrete-filled geotextiles that harden on hydration to create a thin, durable, waterproof, and lower-carbon concrete layer – essentially, concrete on a roll.
The system provides a faster, more cost-effective alternative to traditional construction methods. Up to 200m^2 of Concrete Canvas can be delivered on a single pallet, replacing the output of two 3m^3 ready-mixed trucks. This minimizes logistics needs, reduces environmental impact, and lessens the contractor's workload on civil engineering projects.
Cowbridge Road, Pontyclun CF72 8HL; (0345) 680 1908; info@concretecanvas.com; www.concretecanvas.com

ConSpare Ltd
F6

ConSpare will showcase a wide range of solutions designed to improve the performance, efficiency, and reliability of concrete batching plants. Established in 1978, the company has evolved into a key problem-solving partner for concrete production, supporting customers across the full batching process from mixing and conveying through to block making, wear protection and moisture control. On their stand, ConSpare will feature 18 exhibits, including TEKA, THT and THZ mixer displays, twin-shaft wear parts, Hydronix moisture measurement systems, conveyor improvement solutions, and block machine equipment and components. A key highlight for 2026 is the ASSYX DuroBOARD Production Board, which combines the benefits of wood with polyurethane protection to deliver long service life and consistent, high-quality concrete production.

DB Cargo UK
PD40
DB Cargo UK are one of the UK's leading rail freight operators, providing reliable, efficient transport for bulk construction materials, including aggregates, sand, bricks and concrete products. Each year, the company moves millions of tonnes of material from quarries and ports to major construction hubs, supporting infrastructure, housing and commercial development projects nationwide. Its end-to-end service covers train operations, terminal handling, stock management and onward distribution, offering customers flexible, high-capacity logistics available 24/7. High-capacity trains can carry up to 2,000 tonnes per service, significantly reducing reliance on road haulage. Each train can remove up to 76 HGV movements from the road, helping to reduce congestion and emissions while improving supply chain efficiency. With nationwide coverage and extensive industry expertise, DB Cargo UK provide safe, scalable and lower-carbon logistics solutions for the construction sector.

New Product Launch Coming Soon

Fuelco is proud to announce the upcoming addition to our already impressive product range – the 950L and 2000L Mobile Trailer Units.

Fuelco™
complete fuel storage solutions

Designed with both site and highway applications in mind, these units deliver exactly what modern operations demand:

Fast deployment
Efficient refueling
Reliable performance
Cost-effective solutions

Built the Fuelco way – engineered for durability, practicality, and real-world use.

Deutz Xchange engine, before and after refurbishment

Derbyshire Geotechnical Ltd
RC21

Based in the Peak District, Derbyshire Geotechnical are a specialist rope-access geotechnical contractor delivering bespoke solutions while working safely at height and maintaining a strong focus on quality and professionalism. The company provides a wide range of rope-access geotechnical services across the UK and beyond, supporting clients including local county councils, AMCO-Giffen, Breedon Aggregates, Heidelberg Materials, Holcim, Keller Geotechnique, National Trust, TATA Steel and Tarmac. Delivered by fully qualified managers, supervisors, IRATA technicians and subcontractors, services include vegetation clearance, large and complex tree removal, rock anchoring, soil nailing, slope stabilization, and the installation of rockfall mesh and erosion matting. The company also undertakes heritage works, inspects and repairs existing rockfall protection systems, and supports geotechnical and ecological surveys. This capability allows Derbyshire Geotechnical to design and deliver tailored, project-specific solutions to meet client requirements. The company also maintains comprehensive insurance cover, alongside relevant health, safety, environmental, and quality accreditations, for full client assurance.

Desert Engineering Ltd
D16

Desert Engineering supply high-performance air filtration, cab pressurization, and cooling solutions for heavy equipment operating in demanding, high-dust environments. The company is the UK distributor for Cleanfix reversible fans, BMAir advanced cab air quality systems, RESPA cab filtration, and Sy-Klone engine air pre-cleaners and pre-filters. These systems are designed to improve machine efficiency, reduce dust ingress, and maintain cleaner, safer operator environments across quarrying, construction, recycling, and related sectors. Working closely with OEMs, machinery dealers and end-users, Desert Engineering provide tailored supply and installation solutions for each application, helping to minimise breakdowns and protect equipment and operators.

Develon's DL420CVT-7 wheel loader

Deutz AG
V16

The Deutz AG UK branch supports customers across the UK and Ireland with advanced drive solutions for a range of off-highway and industrial applications, including the quarrying and mineral extractives sectors. As a leading manufacturer of off-highway power systems worldwide, Deutz offer a diverse range of drives, including diesel, gas, hybrid, all-electric, and hydrogen options, trusted in demanding environments where reliability, efficiency, and uptime are essential. Returning to Hillhead after several years, Deutz will present a range of new and Xchange engines, including selected Daimler/Mercedes-Benz Truck off-highway engines. There will also be demonstrations of the company's Serdia diagnostic and telematics system, which offers more intelligent methods for monitoring, maintaining, and optimizing machine performance.

DIGGER GUARD
S10

Digger Guard return to Hillhead 2026 with their award-winning range of protective products designed to improve safety, reduce downtime, and enhance machine durability. The company will showcase its UK- and internationally patented Vandal Guards and Polymer Handrail systems, developed with OEM and operator insights to deliver performance beyond traditional steel alternatives. Its Polymer Handrails offer equivalent strength in pull tests while being 75% lighter, corrosion-free, vibration- and fatigue-resistant, and fully compatible with modern sensors and 3D systems. The flagship Vandal Guards are 27% lighter than conventional designs and feature a non-invasive, no-drill system that eliminates the need for rust-prone cages. They also include the industry's only rainproof, lockable storage box.

Also on display is Sky Shield, a removable weather protection system for open-cab machines that offers improved operator comfort and protection without restricting visibility or access. Alongside their product range, Digger Guard also provide bespoke polymer design and precision manufacturing solutions for machine protection and specialist components.

DISAB UK Ltd
C12

Visitors can see DISAB's market-leading industrial vacuum machines in action. The company designs powerful, high-performance vacuum solutions that create safer, cleaner, and more reliable production environments, effectively handling dust, spills, and debris – even under the most demanding conditions. DISAB can integrate durable, adaptable equipment with expert technical support to maximise uptime, enhance operational efficiency, and support sustainability, providing tangible benefits for both customers and the environment. Their range of portable and centralised systems combines power, reliability, and ease of use, making DISAB a preferred choice across the industry. Systems are available for short- or long-term hire, as well as for purchase, tailored to individual operational needs.
Alma House, Alma Road, Reigate, Surrey RH2 0AX; (01737) 246649; infouk@disab.com; www.disab.co.uk

Distag QCS
C27

Distag QCS are a global supplier of premium components for the agricultural, construction, quarrying, and industrial sectors. Working with leading crushing and screening OEMs, the company delivers precision-engineered components, power transmission systems, trailer running gear and bogie solutions, and hydraulic systems – each designed to perform in the most demanding environments. As the UK and Ireland distributor for MPC drums, rollers, impact bars, and scrapers, Distag QCS support efficient bulk material handling. Backed by global manufacturing partnerships and strict quality control, the company offers reliable supply, competitive prices, and consistent performance worldwide.

HIGH TORQUE WHERE IT COUNTS

When designing heavy-duty equipment, performance under load is non-negotiable. Scania industrial engines deliver strong low-rev torque and fast response that are ideal for industrial machines operating in tough, variable duty cycles. High power density, without sacrificing output.

Across emission steps, a common engine architecture with shared mount points and interfaces simplifies installation and reduces platform complexity. Design once and adapt for multiple markets with minimal re-engineering.

For engineering teams focused on optimisation, engine data and application examples are available online to support your specification process.

SCANIA

Doosan Bobcat will show their 1-5-tonne mini-excavators

Don Valley Engineering Co. Ltd

B18

Don Valley Engineering specialize in the design, manufacture, and supply of durable material-handling and processing equipment for the heavy industry. With decades of experience supporting sectors such as quarrying, mining, minerals, aggregates, ports, and bulk materials, the company provides engineered solutions designed for reliability, efficiency, and extended service life in demanding environments.

Donaldson

RC25

Donaldson are a global leader in advanced filtration solutions for the construction, mining and off-highway sectors, backed by more than 100 years of filtration expertise. Trusted by OEMs and equipment operators worldwide, Donaldson supply air, fuel, hydraulic and lube filtration systems designed to maximize uptime, reduce maintenance costs and protect machinery in demanding environments. The business portfolio also includes next-generation technologies such as the ArmourSeal air cleaner systems, engineered for durability, performance and extended service life. Built to withstand high vibration, extreme dust loads and harsh operating conditions, Donaldson filtration solutions help prevent contamination, improve efficiency and lower the total cost of ownership across heavy-duty applications.

Dragon Equipment's CR550 hybrid crusher will take centre stage on their stand

Dragon Equipment Ltd

H9

British-built and designed, Dragon Equipment are redefining compact on-site machinery with a focus on efficiency, ease of use, and full transportability. Every machine is engineered for real-world applications across demolition, recycling and construction, helping operators work smarter and with confidence. At Hillhead 2026, the CR550 hybrid crusher takes centre stage, offering high-performance crushing in a compact, towable 2.8-tonne package. With hybrid power and strong output, it delivers the capability of a much larger machine without the associated size or transport challenges. Also featured will be the CR450 diesel crusher, designed for straightforward on-site recycling with adjustable crush sizing, remote-control operation and anti-stall technology for reliable, stress-free performance. Completing the line-up, the LF1000 lifter provides versatile material handling with a one-tonne lift capacity and interchangeable attachments, making it a compact, multi-purpose solution for demanding sites.

Dustquip / Impellr Pumps
D15

Dustquip and Impellr Pumps are complementary engineering brands delivering practical, high-performance solutions for demanding site environments. Together, they support construction, civil engineering, utilities, and industrial operations with equipment designed to control both water and dust on site. Impellr specialize in heavy-duty, rental-ready pumping and water-management systems for dewatering, sewage, and fluid transfer applications, engineered for reliability and ease of use in real-world conditions. Dustquip design and manufacture advanced dust-suppression technologies, including mist cannons and jet misting systems, helping sites maintain safety, compliance, and environmental control. As part of a wider group, the two brands provide a complete, integrated site solution, combining robust, plug-and-play equipment to efficiently, reliably, and rapidly manage water and airborne dust challenges.

The Enviro Volumetric Mixer

Enviro Volumetric Mixers Ltd

A1

Enviro Volumetric Mixers were formed by Philip Wright and Luke Mansell, bringing a combined 40 years of engineering experience across agriculture, transport and construction to deliver a UK-built solution for volumetric concrete production. The Enviro Volumetric Mixer is engineered to optimize hydraulic performance and control systems, reducing fuel consumption while maximizing output without compromising environmental performance. By working with world-leading suppliers with UK-based support, the company ensures a robust supply chain for both manufacturing and field service, supporting reliable component availability and responsive after-sales support.

EPC United Kingdom Ltd

B21

EPC-UK, specialists in drilling, blasting, and commercial explosives, will showcase their technologically driven projects and services to improve blast performance and deliver greater value to customers. The EPC-UK team will demonstrate its upgraded Expertir blast-design software, a key part of EPC's technological ecosystem that supports engineers in planning and executing safe, efficient, and optimized blasts. EPC-UK will also present their ROG+ (Rock-on-Ground Plus) service, along with customized software and supporting hardware solutions that deliver full digitalization of advanced analytical processes. Additionally, the company will use the event to unveil its multi-million-pound investment in a future-ready booster manufacturing plant, set to produce high-quality pressed TNT boosters in the UK.

EPC-UK will show their ROG+ service

Eriez

F7

Established in 1942, Eriez are a global leader in separation technologies. With a strong focus on innovation, the company has become a key player in magnetic separation, flotation, metal detection and material handling solutions. Operating through 12 wholly owned international subsidiaries and a global network spanning six continents, Eriez support industries including mining, food, recycling, packaging, and aggregates. Today, Eriez manufacture more than 1,000 types and sizes of equipment used to detect and remove ferrous contaminants, recover valuable metals, ensure product quality through sampling, and solve complex material-handling and separation challenges. For quarrying, construction and recycling applications, Eriez provide a wide range of solutions, including suspended, permanent and electro magnets, MetAlarm metal detectors, vibratory feeders and eddy current separators, helping to protect downstream equipment from tramp metal damage and improve operational efficiency. These systems help extend equipment life, reduce downtime and support efficient, compliant material processing across demanding industrial environments.

Essentra Components

PB45

Essentra Components specialize in protective components for construction and quarrying vehicles and heavy machinery, manufacturing in both the UK and globally. The company's offering spans standard protection products and custom-engineered solutions, developed in close collaboration with customers to meet specific application needs. The product range includes caps and plugs, hose protection, cable management systems, and machine hardware components, all designed for durability and high performance. By helping to protect equipment and reduce downtime, the company supports reliable operation in the most demanding environments.

Langford Locks, Kidlington, Oxfordshire OX5 1HX; (0345) 528 0474; sales@essentracomponents.co.uk; www.essentracomponents.com

Euro Auctions

RD3

Euro Auctions are a leading global auctioneer of industrial plant, construction machinery, and agricultural equipment, offering live and online auctions to buyers and sellers worldwide. The company will showcase its auction services as a key route to market for used equipment across the quarrying, construction and recycling sectors. With a strong international presence and a reputation for high-volume, multi-sector auctions, Euro Auctions connect vendors with a global buyer base, helping maximize asset value and turnover. Their services include equipment valuation, asset management, and full auction logistics, making it a trusted partner for contractors, plant hire firms and fleet owners.

Europa Engineering Group
PD27
Europa Group are a UK-based, multi-divisional engineering and manufacturing business delivering integrated solutions across fabrication, lifting, machining, foundry and refurbishment. Headquartered in Sheffield, the group brings together specialist companies to provide a true one-stop shop for complex engineering projects. Europa Group support the automotive, defence, oil and gas, construction, infrastructure, and extractive industries, blending deep engineering heritage with modern manufacturing. The company's offering spans heavy fabrication and structural engineering, crane and lifting design, manufacture, installation and maintenance, lifting equipment solutions and precision machining. The group also provides foundry services for non-ferrous castings, refurbishment and modernisation programmes to extend asset life, and turnkey project delivery from concept through to installation.

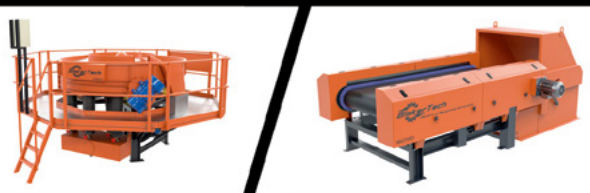
DELIVERING TRUE METAL
RECYCLING PROCESSING PARTNERSHIP



SANDFLO™ METAL RECOVERY
MAGTHRO™ METAL RECOVERY

Two technologies. One goal.

- Proven to extract 5–10% additional value from waste streams
- Designed for consistent, high-purity separation
- The SandFlo produces clean, distinct heavy and light fractions
- Handles a wide range of material sizes, including fines down to sub-4 mm
- Simple, robust systems built for low maintenance and long-term reliability
- UK manufactured, with full service, support, and aftercare
- Built on decades of real-world metal recycling experience

The Finlay J-1280 jaw crusher will be shown publicly in the UK for the first time since its launch in 2025

Finlay
L3
Finlay have been a global pioneer in tracked mobile crushing, screening, and conveying solutions for more than 65 years. The company's equipment is trusted across quarrying, mining, construction, demolition, and recycling sectors, delivering the productivity, efficiency, and long-term value required in demanding applications. Engineered for performance, every Finlay machine is designed to maximise output, reduce operating costs, and simplify maintenance. The crushing and screening specialist continues to drive innovation through hybrid and electric technologies, enhanced safety features, and intuitive controls – supporting a safer, smarter, and more sustainable approach to materials processing. Backed by a dedicated global dealer network, Finlay provide expert support, local service, genuine parts, and operator training worldwide. Whether establishing a new fleet or expanding existing operations, Finlay offer the equipment, technology, and support needed to keep customers moving forward.

Finning UK & Ireland
V1
Finning, the world's largest Caterpillar dealer, return to Hillhead 2026 with a strong focus on digital innovation and advanced machine technologies. The company will highlight the latest connected solutions, productivity tools, remote monitoring capabilities, and sustainability-focused technologies designed to help operators maximise efficiency, reduce downtime, and make smarter decisions both on and off-site. Finning's team of experts will be available throughout the show to demonstrate how data-driven insights, advanced equipment technology, and digital services can enhance fleet performance, improve safety, and streamline operations, supporting customers as they prepare for the future of their business.
Watling Street, Cannock, Staffs WS11 1SL; (01543) 461461; www.finning.com

Fireward Automatic Fire Suppression
V2
Fireward will be exhibiting automatic fire-suppression systems designed to protect heavy plant and machinery in demanding environments across quarrying, waste and recycling, and tunnelling. Designed for fast detection and rapid response, the systems help reduce damage, minimize downtime, and improve operator safety.
Appledale, Eastways, Witham, Essex CM8 3YQ; (01245) 444800; sales@fireward.co.uk; www.fireward.co.uk

Flender
RA20
Flender are a critical supplier of drive technology for processing raw materials such as sand, gravel, and crushed stone. Flender gear units and couplings are designed to handle high torque, heavy shock loads, and abrasive environments typical of quarrying and mining operations. With their state-of-the-art digital drive technology, AIQ, Flender can ensure seamless integration and real-time monitoring of their gear units and couplings. As a global company with first-class service, it can ensure the rapid availability of spare parts and expert local services.
Unit 5 Lockside Road, Stourton, Leeds LS10 1EP; (0113) 385 2534; flendersalesuk.gb@flender.com; www.flender.com

Flexco
PB2
Flexco are committed to keeping conveyor belts and operations moving efficiently by going beyond manufacturing belt fasteners, cleaners, and maintenance products. The company focuses on delivering practical, real-world solutions to conveyor challenges across a wide range of industries. The Flexco Elevate range of digital products will be on display and available for demonstration.
Unit 7, Kingsmark Freeway, Oakenshaw, Bradford, W. Yorks BD12 7HW; (01274) 600942; uksales@flexco.com; www.flexco.com

Flintham Cabins
N16
Flintham Cabins supply rugged, anti-vandal site accommodation and secure storage solutions designed for the challenging conditions of the quarrying, construction, and recycling industries. With over 35 years of experience and supported by the national network of 1st Containers, the company aims to deliver durable, high-quality units that improve both site security and workforce welfare. Its product range includes heavy-duty steel storage containers from 10ft to 40ft, COSHH-compliant units for hazardous materials, and fully equipped anti-vandal cabins. Solutions also include mobile solar-powered welfare units and bespoke configurations such as split offices, canteens, and drying rooms, all built from repurposed corten steel for strength, sustainability, and rapid deployment. With strategically located operations across the UK, Flintham Cabins provide a complete end-to-end service, supporting customers with everything from ISO-standard storage to fully fitted site accommodation.
Rainham House, Manor Way, Rainham, Essex RM13 8RH; (01708) 558700; info@flinthamcabins.com; www.flinthamcabins.com

Flowfit
RC9
Flowfit deliver a comprehensive 'everything hydraulic' offering, supplying components, systems, and bespoke solutions to meet a wide range of customer requirements. The company's experienced team offers customized support across applications, from hydraulic cylinders, hand pumps and motors to pumps and fully tailored hydraulic systems. Recognized as an industry leader in reliable, high-quality hydraulic components, Flowfit blend technical expertise with a strong customer-centred approach. The company's ongoing growth is propelled by its skilled workforce, strategic global partnerships, and continuous commitment to innovation and adapting to evolving customer needs.

Flowtech
A14
Flowtech are the UK, Ireland and Benelux's largest provider of fluid power products, services and solutions, bringing over 40 years of engineering expertise to industries that keep Britain moving. Serving the quarrying, construction and agricultural sectors, Flowtech offer an extensive range of hydraulic, pneumatic and process engineering products, supported by competitive pricing, reliable next-day delivery and a customer service approach focused on exceeding expectations. In just over a year, the company has significantly strengthened its technological foundations with a new customer website and enhanced its European footprint, supporting the next stage of growth and service capability. Strategic acquisitions, including Allswage and Q Plus, have further expanded its technical expertise and product offering. At Hillhead 2026, Flowtech will showcase how their fluid power solutions can improve machine performance, reduce downtime and deliver greater operational efficiency across demanding site environments.
Pimbo Road, Skelmersdale WN8 9RB; (0330) 002 2223; sales@flowtech.co.uk; www.flowtech.co.uk

FM Conway
PC58
FM Conway manufacture a comprehensive range of high-quality aggregates, asphalt, and concrete products for use on the UK's highway network and for other construction and maintenance projects. FM Conway have also developed a portfolio of specialized manufacturing plants and a large delivery fleet to support customers with reliable, efficient supply solutions. The company's manufacturing capabilities allow the development of bespoke material mixes tailored to specific project requirements, while its integrated logistics network provides security of supply and dependable delivery across a wide range of infrastructure and construction projects.
Conway House, Vestry Road, Sevenoaks, Kent TN14 5EL; (0800) 276 1122; AASales@fmconway.co.uk; www.fmconway.co.uk

Fogmaker UK & Ireland
M7
Fogmaker International produce fire-suppression systems for machinery and engine bays, with over 350,000 systems installed worldwide.
The technology is used across a wide range of sectors, including automotive, passenger transport, waste management, agriculture, mining, quarrying, forestry, marine and rail. It is also deployed across major infrastructure environments, including Crossrail, the Channel Tunnel, HS2, and London bus fleets. Fogmaker systems are engineered to operate independently of a vehicle's power supply, ensuring readiness in the event of a thermal incident. The solution has a strong track record of protecting valuable equipment and reducing fire-related damage and downtime. In the UK and Ireland, more than 15,000 systems are installed, supported by comprehensive service, maintenance and technical backup to ensure ongoing reliability and protection in demanding operational environments.
21 Impresa Park, Pindar Road, Hoddesdon, Herts EN11 0DL; (01992) 469781; info@fogmaker.co.uk; www.fogmaker.uk

Fonmar Group
RA12
Fonmar are a global leader in manufacturing equipment for the vulcanization of rubber conveyor belts and tyres, as well as machinery and tools for splicing PVC/PU and transmission belts. With a strong track record in the sector, the company is recognized for its focus on technological innovation, product quality and customer support. Its solutions are designed to deliver strong, durable splices in demanding operating conditions, supported by advanced process control systems with integrated monitoring and data recording capabilities.

Fonmar's portfolio includes heavyweight splicing equipment with a range of press configurations for splicing and repair, as well as lightweight systems that offer precise fusion across all belt types. The company also provides tyre repair machinery capable of handling a wide variety of tyre sizes and damage areas, including sidewalls, shoulders and treads. Together, these solutions support efficient belt preparation, maintenance and repair across a wide range of industrial applications.

Forest Press Hydraulics Ltd
B15
Forest Press Hydraulics manufacture 'wet presses' for producing paving slabs and kerbstones from its Cinderford, UK, facility. The company produces triple-mould and single-mould systems in both semi-automatic and fully automatic configurations, alongside tooling, filling devices, and a full range of spare parts to support its equipment. Using the latest CAD/CAM systems and CNC machining technology, Forest Press delivers precision-engineered solutions.
Hollywood Works, Valley Road, Cinderford, Glos GL14 2PD

Forktruck Solutions & EP Energy
S3
Forktruck Solutions, Mobile Energy Solutions and EP Energy will showcase a comprehensive range of advanced lithium-powered technologies for modern operations. The line-up includes high-performance lithium electric forklifts, mobile power units, and intelligent charging systems, all designed to improve reliability and efficiency while reducing emissions. Working in partnership with EP Equipment, the companies provide innovative solutions that support more sustainable and productive operations. Visitors to the stand can explore how these integrated materials handling and energy systems can power businesses now and in the future.
6, Shaw Cross Court, Dewsbury WF12 7RF; (01924) 265623; info@forktrucksolutions.com; www.forktrucksolutions.com

Fortop Automation Ltd
PA33
fortop Automation & Energy Control (fortop UK) will make their Hillhead 2026 debut, bringing together four specialist sensor and signalling brands focused on safety, monitoring and control for quarrying and construction applications. The stand will feature DIS Sensors' MEMS-based tilt sensors and inclinometers, designed for safety-critical applications and certified to SIL2 and PLd, providing accurate angle monitoring for mobile machinery operating on uneven terrain. Auer Signal will showcase robust light towers and signalling devices that deliver clear visual and acoustic alerts in harsh, dust-heavy environments, while Steute will present heavy-duty pull-wire and belt-pulley switches for reliable conveyor emergency-stop protection. Inxpect 3D radar safety systems will also be demonstrated, offering advanced zone protection around mobile equipment, even in challenging conditions where optical systems are limited. fortop UK will be available throughout the show to advise on application-specific safety and sensing solutions.

Malvern Hills Science Park, Geraldine Road, Malvern, Worcs WR14 3SZ; (01684) 362916; www.fortop.co.uk

Forvac Services Ltd
C35

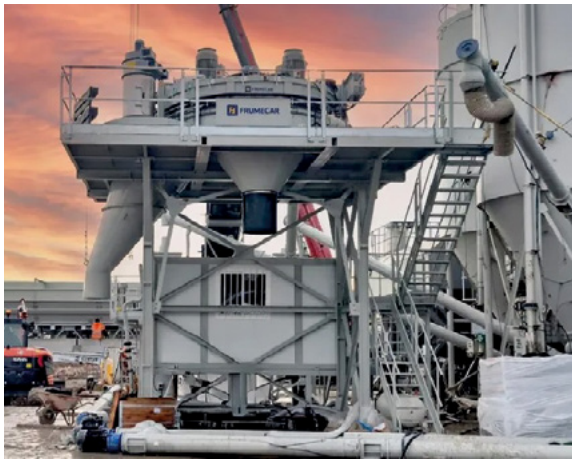
Forvac is one of the UK's leading independent manufacturers and suppliers of heavy-duty vacuum systems, with a strong 'Made in Britain' heritage. Known for their established FVP vacuum models, the company offers a comprehensive range of high-quality mobile vacuum solutions for light industrial, process and ATEX applications, delivering reliable performance across demanding environments.
F8 Mercia Way, Foxhills Industrial Estate, Scunthorpe, North Lincs DN15 8RE; (01724) 277586 / 0333 091 2005; info@forvac.co.uK; www.forvac.co.uk

Fronius UK Ltd
PD14

Fronius UK Ltd provide advanced MIG/MAG, TIG, MMA, and LaserHybrid welding solutions across manual, robotic, and fully automated systems. In the yellow goods sector, components such as excavator arms, axles, and frames involve very thick materials and long weld seams that must withstand enormous mechanical loads and high tensile forces, requiring deep penetration, high deposition rates, and reliable gap bridging to ensure structural integrity and safety. Fronius UK support customers with comprehensive service and expertise to match its advanced welding technology. With facilities in Milton Keynes, Rotherham, and near Glasgow, its specialist teams provide guidance, training, and rapid assistance across a wide range of welding applications. Visitors to the stand can experience live welding demonstrations and even try the technology firsthand.
Maidstone Road, Milton Keynes MK10 0BD; (01908) 512300; info-uk@fronius.com; www.fronius.co.uk

Frontline Safety UK Ltd
RC7A

Frontline Safety UK source and supply the world's leading industrial safety products, partnering with trusted brands to deliver equipment that performs when it matters most. From gas detection and real-time dust monitoring to respiratory protection, the company provides solutions designed to protect workforces in the most demanding environments. Trusted by over 15,000 customers across 120 countries, the company supports businesses in quarrying, construction, mining, and heavy industry.
200 Old Dalmarnock Road, Glasgow G40 4DW; (0141) 771 7749; www.frontline-safety.co.uk



Frumecar concrete batching plant

Frumecar
PA50

Frumecar, co-exhibiting with Cormac Engineering, manufacture a range of concrete batching plants with outputs from 30m³/h to 150m³/h, available in both dry and wet batch configurations, and supplied as fixed or mobile systems. At Hillhead, the company will also showcase its Fastmix range, designed for small- to medium-sized contractors seeking efficient, flexible and reliable concrete production solutions.
C/Venexuela P. 17/10, Pol'gono Industrial, Murcia, 30169, Spain; www.cormac.co.uk

NFLG NFI200RS tracked mobile impact crusher

FSL Electronics Ltd
PD35
FSL Electronics design and manufacture wireless control systems for materials handling equipment and machinery across a wide range of industries. For over 35 years, the company's solutions have been trusted to deliver safe, reliable, and efficient operation in challenging environments. FSL also offer a bespoke design service, providing solutions tailored to individual customer requirements, supported by their experienced in-house R&D design team. At Hillhead 2026, the business will showcase its ProGrip range of industrial remote-control solutions, alongside ELCA radio remote controls.

Fujian South Highway Machinery Co Ltd
PB28
NFLG are a global manufacturer and solution provider, specializing in crushing, screening, and materials processing equipment for the quarrying, mining, and aggregates industries. The company offers a comprehensive range of mobile and stationary crushing and screening plants, sand and aggregate processing systems, washing solutions, and recycling equipment. NFLG solutions are designed for demanding operating environments and are widely used in limestone, hard rock, and mineral processing operations, supporting both new installations and plant upgrades. Technology innovation is central to NFLG's development. Through intelligent control systems, AI-enabled monitoring, and modular plant design, NFLG help customers improve productivity, optimize material quality, and achieve stable, long-term plant performance. Focusing on system-level solutions rather than individual machines, NFLG is committed to delivering reliable, efficient, and lifecycle-oriented value worldwide.

GIPO

L1

GIPO stands out in the mobile crushing and screening sector, engineering high-performance material-processing plants designed for power, precision and long-term reliability. Each GIPO machine is purpose-built with heavy-duty construction to handle extreme production demands, while integrating carefully engineered systems that prioritize control, efficiency and operational consistency. The result is equipment designed to perform in high-volume, technically challenging applications without compromising build quality or output stability. A strong focus on bespoke engineering allows customers to configure fully customized crushing and screening solutions tailored to specific materials, production targets and site requirements. This includes flexibility across plant layout, core components, control systems and mobility options. Intelligent system design ensures that crushing power is precisely matched to material flow control, delivering maximum throughput while maintaining product quality and overall plant efficiency. GIPO deliver robust processing capability, refined through precision engineering, supporting operators who require high output and full control at scale.

GKM Siebtechnik GmbH

C15

GKM Siebtechnik GmbH will showcase their KTS tumbler screening machine, designed for high feed rates and efficient multi-deck separation of fine, lightweight, and difficult-to-screen materials. The company offers a broad portfolio of advanced screening technologies for the efficient separation and dedusting of dry powders and granular materials across a wide range of industries. The KTS-V2 and KTS-VS models deliver reliable, high-capacity screening performance for both dry and wet applications, including high-value materials. Also featured will be the KTS-VP2 control screener, engineered for pneumatic conveying systems, such as truck unloading into silos. Compliant with the EU Pressure Equipment Directive (2014/68/EU), it operates safely within a pressure range of –0.5 to 2.0 bar, ensuring consistent product quality while reducing downtime and rejects. A key innovation is GKM's pneumatic multi-deck lifting system, which allows the simultaneous lifting and exchange of multiple screening decks. This improves accessibility, reduces maintenance time, and enhances operational efficiency, particularly in confined installations. With over 40 years of experience, GKM deliver high-performance screening solutions tailored to demanding industrial applications worldwide.

UNSHAKEABLE PERFORMANCE

HÄGGLUNDS

HPC Compressed Air Systems
B6
HPC have been a leader in the UK compressed air equipment market for 50 years, with their iconic 'yellow-box' systems found across workshops, garages, factories, and power stations. In partnership with Kaeser Kompressoren SE, HPC deliver reliable, efficient compressed air solutions to some of the UK's most respected industrial operators. This collaboration underpins HPC's business, further strengthened by a network of authorised distributors who provide expert installation and aftermarket support, ensuring maximum performance and long-term system reliability.

Hydrastore Ltd
PA30
Hydrastore specialize in engineered hydraulic systems, power units, electrification, and electronic and radio-control solutions for mobile and industrial machinery. The company delivers complete turnkey systems that integrate hydraulics, electrics, software, and controls for demanding sectors, including quarrying, recycling, construction, offshore, energy, and heavy industry.
As a Tier 1 partner to leading manufacturers in hydraulics and related industries, Hydrastore provide high-performance hydraulic and electrohydraulic solutions, backed by deep technical expertise and rapid UK-based support. From machine upgrades and retrofits to full-system design and electrification projects ranging from 5–1,000kW, the company helps customers enhance reliability, efficiency, and sustainability.

Hydrotechnik UK Test Engineering
E2
Hydrotechnik UK Test Engineering are one of the UK's leading suppliers of hydraulic test and measurement equipment, serving industries from construction equipment to Formula One since 1990. The company offers a comprehensive range of measurement sensors and data logging solutions for digital hydraulic testing and analysis. Its portfolio includes Minimess test points, test point adaptors, high-pressure microbore hose assemblies, pressure gauges, and test kits for analogue testing, charging, bleeding, or sampling of almost any fluid or gas. Hydrotechnik's measurement sensors cover pressure, flow, temperature, revs/min, and more, while their MultiHandy and MultiSystem portable dataloggers provide accurate high-speed measurement and performance analysis for hydraulic and process systems. Renowned for quality, ease of use, and flexibility, Hydrotechnik equipment is trusted by professionals worldwide.

Hytorc Industrial Bolting Solutions
RD27
Hytorc are a family-owned business dedicated to delivering value through innovation, service, and safety. Since its founding in 1968 by John Junkers, the business has transformed industrial bolting, replacing slow, unsafe, and cumbersome methods with efficient, reliable, and high-quality solutions. The company's mission has remained constant: to optimize industrial bolting through innovative technology and an unwavering commitment to customer satisfaction, making jobs safer and hassle-free. As an industry leader, Hytorc set themselves apart through patented technologies, custom solutions, and a simple philosophy – treat customers the way you want to be treated. Its equipment and services are backed by a global support network, including authorized repair facilities and dedicated representatives in over 100 countries, ensuring fast, professional service 24h a day, seven days a week. With Hytorc, customers benefit from safer operations, increased productivity, and trusted expertise wherever they work.

Hirox hydraulic breaker from Importance Ltd

Importance Ltd
CE8

Hirox is a British brand specializing in hydraulic breakers and heavy-duty attachments for the construction, demolition and quarrying sectors. Built on a foundation of engineering integrity and reliability, the company is recognized for delivering robust, high-performance solutions for demanding site conditions. The product range includes hydraulic breakers engineered for high-impact energy, reduced vibration, and long service life, and compatible with a wide range of excavators. Hirox also offer a broad selection of attachments, including compactors, grabs, pulverizers, mulchers, flails and scrap shears, alongside wear parts and consumables such as chisels, seals, and components. With a focus on durability, performance and serviceability, Hirox products are designed to maximize productivity while reducing downtime through easy maintenance and readily available parts. The company also provides custom attachment solutions for specialist applications.

Institute of Quarrying
PA2

The Institute of Quarrying (IQ) is the professional membership organization for individuals working across the minerals, aggregates and related industries. It promotes excellence, innovation and best practice through professional development, networking and knowledge sharing. IQ supports its members with training, qualifications, technical resources and events, helping to drive safe, sustainable and responsible quarrying while strengthening professional standards across the sector. IQ will highlight the recent National Occupational Standard (NOS) update, the Diploma in Explosives Surface Mining Engineering course, and the value of becoming an IQ Member. Meet the team and find out more about IQ, its membership benefits, education and training opportunities, and more at Hillhead 2026. Also at the stand, MP Connect will demonstrate its workforce platform, which audits drivers and contractors entering sites to ensure they are suitably qualified and inducted to work in specific environments. MP Connect also includes a cost-effective assurance tool for businesses.

In addition, MP Awards will be on hand to explain the review of the existing Safety, Health and Environmental (SHE) standards and qualification frameworks. The updated standards have been developed through a structured, collaborative approach that brings together quarry operators, training providers, awarding organisations, trade organisations, and professional institutions.

Irish Manufacturing Services Ltd

E4

IMS were formed in 2010 by a team with extensive experience in designing and manufacturing equipment for the mining, quarrying, recycling and materials-handling industries. Based in Northern Ireland, a region internationally recognized for its engineering capability, IMS operate from a purpose-built manufacturing facility designed to ensure efficient production and consistent product quality. The company has established design and manufacturing partnerships with major international suppliers and offers bespoke, engineered solutions for applications where standard equipment does not meet end-user requirements. This dual approach, combining specialist partner technologies with custom-built solutions, allows IMS to deliver flexible, reliable and application-specific equipment tailored to the needs of customers across demanding industrial sectors.

JCB's 420X Stage V excavator

ITH Bolting Technology UK

PA37

ITH Bolting Technology develop, manufacture and distribute hydraulic bolt tensioning tools and torque wrenches for tightening and loosening bolted connections from M16 (3/8in) upwards. Their portfolio includes hydraulic bolt tensioning cylinders, hydraulic torque wrenches, and electric, battery-powered and pneumatic torque wrenches within the ITH Nut Runner range, alongside high-pressure pumps in electric, battery and pneumatic formats. The company also supplies complementary hydraulic equipment, digital testing and documentation systems, and tailored customer-specific bolting solutions. As a full-system provider, ITH offers engineering support services, standard and special fasteners, and a broad range of bolting tool services. The business covers all major tightening methods, including hydraulic tensioning, torsion- and friction-free tensioning, torque tightening and torque-angle techniques, enabling precise and reliable control of bolt connections across demanding industrial applications.

JCB

A35 / D6

JCB will demonstrate their long-standing commitment to the quarrying, aggregates and recycling industries by showcasing a range of machines engineered to deliver performance, reliability and productivity in the most demanding applications. JCB's purpose-built products for these sectors include crawler excavators, wheel loaders, Loadall telescopic handlers, backhoe loaders and compaction equipment, all proven in the most demanding environments. The latest additions to the range build on decades of industry-specific experience, delivering machines that are more powerful, efficient, durable, comfortable and safer to operate than ever before. Close collaboration with customers in the quarrying, recycling and aggregates sectors continues to shape product development, ensuring JCB equipment is purpose-built for real-world operations.

Jihostroj a.s.

PC68

Jihostroj are a long-established engineering company, founded in 1919, serving global manufacturers across the aerospace, construction, agricultural, and mobile equipment sectors. Their operations are divided into two core divisions. The hydraulic division produces gear pumps, motors, distributors, and valves, including heavy-duty cast-iron pumps designed for demanding applications such as crushers and screeners. The aviation division specializes in aircraft fuel and hydraulic system components, propeller control systems, and APU fuel control units for leading aerospace manufacturers. Jihostroj operate their own electroplating, heat treatment, and tooling facilities, ensuring full control over production quality. The company is certified to ISO 9001, ISO 14001, and ISO 50001, while its aerospace division also holds AS9100, EASA Part 21 and 145 certifications, with selected processes approved under NADCAP.

Stand V20

CIRCULAR®

Circular Group specialise in the supply of tailored wet processing solutions for sand, aggregates and recycling applications.

Offering complete solutions from feed system through to filter press, and everything in between - including plant upgrades and spare parts.

They are delighted to welcome guests to their stand at Hillhead, where visitors will enjoy a closer look at the products on display and the opportunity to speak directly with the industry experts behind them. On show will be the SandPro® Sand Washing Unit, Titan® Logwasher, dewatering screens, and the i-Floc® auto flocculant system.

Circular Group's core products include:

- SandPro® - Sand washing units
- Titan® - Logwashers & screening units
- SiltPro® - Hi-Rate Thickeners
- i-Floc® - Auto polymer dosing
- XScalp® - Scalping Units
- i-Pro® - Advanced automation, displays & self-regulating systems
- Hoppers & Conveyors
- Dewatering Screens
- Washing & Sizing Screens
- Filter Presses

JJMac Ltd
C32
JJMac are a Lincolnshire-based civil engineering, earthworks and groundworks contractor delivering services nationwide, including soil modification, ground stabilization, earthworks and remediation. Ground Stabilization and Soil Improvements using lime and cement are long-established, tried-and-tested techniques in the UK. These techniques can be used to provide cost-effective, high-performance capping layers for highways, piling platforms, temporary haul roads and compounds. By using in-situ soils to create the capping layers, stabilisation offers other key benefits, such as reduced excavation and disposal and less need for imported aggregates on site. The team at JJMac can undertake testing and analysis of the current subsoils on site. Once testing is complete, the company's soil engineers and design consultants will provide the optimum design and methodology to achieve the required performance specification for a client's application.
Spalding Road, Bourne PE10 0AU; (01778) 423904; admin@jjmac.co.uk; www.jjmac.co.uk

JMG Systems Ltd
PD35
JMG Systems are a family-run, Northern Ireland-based business with around 50 years' experience delivering cutting-edge control solutions for industrial and machine applications. The company offers a 360° service covering consultancy, design, manufacture, support and spare parts, providing fully integrated machine control systems tailored to a wide range of industries. Its product range includes control panels, wiring harnesses, telematics systems and associated cabling and accessories, all engineered to deliver adaptable, comprehensive control solutions. These systems are designed and manufactured to ISO 9001 standards, ensuring high levels of ingress protection, reliability and operational safety. JMG Systems' technology provides real-time performance feedback and detailed fault history tracking, enabling users to monitor equipment condition and optimise performance. With fully customisable software and intuitive interfaces, the company focuses on delivering advanced, user-friendly control solutions for modern industrial operations.

K-Tec
Y5

K-Tec are specialist manufacturers of high-capacity earthmoving scrapers engineered to transform bulk material movement across construction, infrastructure and large-scale earthworks projects. Designed around efficiency and scale, K-Tec machines move more material in fewer passes – reducing cycle times, fuel use and operating costs while maximizing site productivity. The company's distinctive scraper designs pair powerful load capacity with smart engineering, allowing contractors to reshape ground faster and more efficiently. Built for tough conditions and serious output, K-Tec equipment challenges conventional earthmoving methods by delivering a simpler, more productive way to move material at volume. K-Tec redefine earthmoving efficiency with purpose-built machines that move more, work harder and unlock a new level of productivity on demanding sites.

Kingfisher Industrial Ltd
C14
Kingfisher specialize in enhancing the performance and durability of process plant and equipment, such as transfer chutes, cyclones, hoppers, vessels, and process pipework, used across utilities, manufacturing, and bulk material handling industries. Operating in environments where materials such as minerals, ores, cement and ash can cause significant wear and degradation, the company provides solutions that counter these damaging effects. By protecting equipment from abrasion and extending service life, Kingfisher help to reduce unplanned downtime and maintenance demands. Through a combination of advanced materials technology and engineering expertise, the company ensures that critical processes remain efficient, reliable, and continuously operational. This approach not only safeguards valuable assets but also supports improved productivity and cost efficiency for customers. Kingfisher deliver practical, high-performance solutions that strengthen the resilience of industrial systems, allowing businesses to maintain consistent output even in the most demanding processing conditions.
Whitehouse Road, Kidderminster, Worcs DY10 1HT; (01562) 543108; enquiries@kingfisher-industrial.com; www.kingfisher-industrial.com

Kinshofer UK Ltd
A42
Kinshofer UK Ltd offer an extensive range of attachments for equipment carriers, with or without hydraulics, serving industries including scrap, demolition, track construction, landscaping, snow clearing, excavation, road construction, forestry, and recycling. Driven by the growing demand for transportation and infrastructure, Kinshofer continuously develop innovative solutions, from high-performance HPXdrive grapples to NOX tiltrotators and TC tilt couplers, as well as bespoke products for unique applications. With high-quality, cutting-edge technology and a wide product range, Kinshofer say their crane and excavator attachments set worldwide standards.

Kioti
Y5
Kioti are global manufacturers of compact tractors and utility vehicles, supplying well-engineered equipment for agriculture, landscaping, construction and grounds maintenance. The brand is recognized for its straightforward design, robust build quality and machines that are both comfortable and dependable across a wide range of applications.
Moorfield Road, Duxford, Cambridge CB22 4QX; (0330) 175 5586; www.smt.network/gb

Kiowa - Alfagomma UK
RC19
Kiowa and Alfagomma UK are presenting a combined offering that brings global hose engineering and UK assembly expertise together for the quarrying and mining sectors. As part of the Alfagomma Group, Kiowa and Alfagomma UK deliver rugged hydraulic and industrial hose solutions, abrasion resistant products, and custom assemblies built for the toughest site conditions. The Kiowa and Alfagomma UK stand is said to highlight a seamless, end to end service for operators who need durability, safety, and reliable performance across their entire operation.
The Reservation, East Road, Sleaford NG34 7BY; (01529) 416200; sales@kiowa.co.uk; www.kiowa.uk

Kirkby Tyres Ltd
V22
This year, Kirkby Tyres will showcase a range of OTR, quarry and plant tyres from across their portfolio, with a strong focus on their exclusive partnership with BKT, alongside the growing Dynamaxx range and wider offering, including Maxam. The stand will feature the new DYNAMAXX 750/65R25 ALLGRIP+ E3/L3 and the DYNAMAXX LUG GRIP+ L5 Traction tyre, both designed for demanding earthmoving and heavy-duty applications.
Speke Hall Avenue, Speke, Liverpool L24 1UU; (0151) 332 4444; www.kirkbytyres.co.uk

Klipboard
RB19
Klipboard are a leading provider of business management software solutions, offering industry-specific, cloud-based software across rental, manufacturing, transport management and field service management – designed for the construction, equipment and plant industry.

Kramp UK Ltd
C4
Kramp are a leading specialist in parts and technical solutions for the construction, agricultural, forestry and landscaping sectors. Founded in 1951 and headquartered in the Netherlands, Kramp have grown into a trusted partner for dealers and professionals across Europe. With a comprehensive range of more than 500,000 products, Kramp combine deep technical expertise with fast, reliable logistics to help customers keep their businesses running smoothly. Beyond supplying parts, Kramp support their partners with digital tools, data-driven insights and tailored services designed to improve efficiency, availability and customer satisfaction. Sustainability, innovation and long-term partnerships are central to Kramp's approach, ensuring the company continues to add value in a rapidly evolving market. By focusing on convenience, knowledge and collaboration, Kramp allow their customers to focus on what matters most: serving end users and growing successful businesses.

Kubota (UK) Ltd
M1
At Hillhead 2026 Kubota UK will be highlighting their growing range of construction equipment designed for demanding applications across quarrying, construction and recycling. Alongside the company's established compact machinery line-up, Kubota will showcase how their product offering continues to evolve, including their 14-tonne excavator, the latest wheeled excavator models, and the introduction of the compact track loader. Built with a focus on reliability, performance and operator comfort, Kubota machines are designed to deliver dependable operation in challenging environments.
Dormer Road, Thame, Oxon OX9 3UN; (01844) 214500; kuk.kubota-eu.com

KUTAVAR
V18
Established more than two decades ago, KUTAVAR design and manufacture high-quality compact CNC plasma cutting tables. The company's high-precision, high-performing, robust machines are designed to be simplistic and intuitive, producing unrivalled accuracy, with the largest load capacity.
1 Beacon Road, Hereford HR2 6JF; (01432) 805700; sales@kutavar.com; www.kutavar.com

Lancereal
RB8
Lancereal are leading powertrain solutions providers and systems integrators for industrial and mobile equipment. With world-class components, specialist services and bespoke, specially engineered systems, they help drive businesses and industry forward. The company supports organizations across the construction, quarrying and recycling sectors with high-quality machinery parts, comprehensive technical expertise and their innovative, problem-solving approach. Lancereal supply a wide range of power-transmission solutions for use with equipment such as dumptrucks and plate compactors. These products include eAxle systems, motor controllers and centrifugal clutches, all designed to work in the challenging conditions created by day-to-day use in the construction, quarrying and recycling industries.
Springfield Mill, Penistone Road, Kirkburton, Huddersfield HD8 0PE; (01484) 606040; sales@lancereal.com; www.lancereal.com

LBW Machines Ltd
PE4
At the forefront of portable on-site machining, LBW Machines deliver robust, high-performance line boring and rotary welding equipment designed to keep heavy industry moving. The company's field-proven machines are engineered for precision, durability, and efficiency, allowing operators to carry out critical repairs directly on site – eliminating costly downtime, reducing transport requirements, and keeping assets operational when it matters most. With equipment built to handle real-world conditions, from remote job sites to high-demand industrial environments, industries such as earthmoving, construction and recycling receive seven-days-a-week after-sales support and next-day delivery on spare parts and consumables, minimizing machine outages, allowing rapid on-site repair, reducing dependency on workshop-based repairs, and increasing operational uptime.

VEGA HOME OF VALUES

Losi Ltd
PC52
Established more than 30 years ago, Losi Group are major suppliers of hydraulic drive solutions to the OEM construction machinery market. As partners for M+S Hydraulic motor drives and Caproni gear pumps, Losi offer a full range of orbital motors, brakes, motion control valves with gear pumps to feed them. The company provides in-house custom design and manufacture of manifold valve solutions. Innovative gearbox motor combinations that deliver very low speed, high torque, conveyor drive solutions are complemented by a full range of M+S Hydraulic steering units, columns, and wheels. To complete the steering package, Losi team up with Technowell, providing electrical forward reverse shifters and turn signal indicators supplied as part of the complete steering assembly, designed for robust non-cab applications and sealed to IP67 standards against water and dust ingress. With many years of design and application experience, Losi can provide full technical support from design through to commissioning.

Major Wire Industries Ltd
PA3
Major's renowned lime-green Flex-Mat High Vibration Wire Screen has been transforming the screening industry for more than 20 years, setting a new standard in screening performance for aggregate, mining and industrial producers. Flex-Mat's revolutionary concept makes media an active part of the screening process compared with static media such as woven cloth or synthetic modular panels. Its wires are not woven but bonded by high-density polyurethane strips to vibrate independently at high frequency under material contact. This added vibration speeds up material separation and passing to increase throughput, lengthen wear life, and eliminate blinding and pegging. Compared with self-cleaning screens, Flex-Mat screens are designed for all decks, from scalping to finishing. They are made with the unique patented steel Optimum Wire and are available in the widest range of openings for tensioned or modular applications.

MB Crusher
A34
For more than 20 years MB Crusher have been designing and manufacturing attachments for heavy equipment regardless of size. Perseverance and resilience led the company to invent the first jaw crusher for excavators. Investing in technology research contributed to the development of MB products that can be installed on any carrier machine, turning them into a real mobile crusher while improving the machine's performance and allowing companies to optimize use of the resources available at their job sites. Over the years the company's products have evolved to become the benchmark around the world today.

McCloskey International
L1
Celebrating their 40th year last year, McCloskey International have established a worldwide reputation for high-performance products that have introduced many of today's key mobile screening and crushing innovations. Offering a complete range of mobile crushers, screeners, stackers and trommels, McCloskey's headquarters in Co. Tyrone, Northern Ireland, houses their crusher and screener engineering office, while their office and manufacturing facility in Ontario, Canada, is an advanced and highly capable 410,000ft^2 production plant, making McCloskey one of the largest manufacturers of mobile screening and crushing equipment in the world.

McGirr Engineering Ltd
C29
Founded in 1984, McGirr Engineering are a leading manufacturer of mobile concrete block-making machinery with more than 40 years of industry experience, and a reputation built on quality, reliability, and innovation. The company specializes in the design and manufacture of high-performance block-making systems tailored to meet the evolving demands block-making industry. Combining advanced engineering expertise with customer-focused service, the company supplies durable and efficient machinery to clients across the UK, Ireland, and international markets worldwide. McGirr Engineering offer a comprehensive range of block-making solutions, including: Multilevel Masterblock MKII, Masterstrap automatic strap and stack systems, turnover/cuber systems, MG24 and MG44 mobile block machines, custom moulds and attachments, genuine spare parts, and after-sales support. Each machine is engineered for maximum productivity, operational efficiency, and long-term performance in demanding environments.

McLanahan
J4
McLanahan Corp. have been providing process-engineered solutions since 1835, with a focus on the aggregate, construction and demolition (C&D), mineral, and agricultural industries. The company designs and manufactures start-to-finish virgin aggregate and C&D recycling solutions for both wet and dry applications that are tailored to each unique operation. With dedicated engineers, in-house lab testing, project managers, field service technicians and more, McLanahan offer support from the selection process through the life of the equipment.

MCT Italy Srl
U18
MCT are a global leader in concrete production technology, supplying a comprehensive range of solutions including concrete batching plants, mobile plants, aggregate bins, mixers, silos, cement screws, and admixture and concrete distribution systems (eg travelling buckets, hoppers, and skips) for precast, block and paver, and ready-mixed concrete producers. In collaboration with GECO Recycling, MCT also deliver a complete line of concrete reclaiming and recycling systems, including advanced filter presses and water-treatment solutions. By offering state-of-the-art concrete reclaimers and slurry separators, alongside versatile and cost-efficient filter presses for slurry compaction, MCT provide the expertise and technology needed to develop and implement optimal production solutions. MCT's eco-friendly water-treatment systems allow the recycling of up to 100% of washout water, including precise pH regulation to ensure it can be safely returned to production. Represented in the UK and Ireland by PUK, MCT's concrete recycling unit and filter press will be showcased at this year's show.

Merlin Diesel Systems Ltd
PC43
Merlin Diesel Systems are one of the world's leading aftermarket suppliers of diesel fuel injection systems and equipment with more than 75 years of experience. Extending beyond their established UK network, Merlin export to more than 100 countries worldwide. As national diesel distributors for Delphi, DENSO, Stanadyne, and Bosch test equipment; authorized diesel distributors for Bosch, Perkins, Schaeffler, Vitesco, and Yanmar; and European distributors for DISA and Robiel, Merlin boast an inventory of more than 750,000 OEM-approved parts valued at £33 million. The company's remanufacturing facilities use OEM-authorized test benches, allowing testing across a broad spectrum of diesel technologies. The Merlin Diesel Group operate from six locations, including Preston, Halifax, Harrow, Newcastle upon Tyne, Colchester, and Shanghai.

MES International Ltd
RA16
Founded in 1981, MES International are a trusted supplier of products, services and engineered solutions to the mining, quarrying, recycling and bulk material handling industries across the UK and overseas. The company provides a complete range of services including conveyor systems, lightweight plastic conveyor guarding, vulcanizing services, fabrication and maintenance, dust suppression solutions, rubber products, and material handling equipment. The company supports customers operating in demanding environments where reliability, safety and fast response times are critical. Known for their 'one-stop-shop' approach, MES work closely with quarrying, mining, recycling and demolition operators to improve site safety, reduce downtime and increase operational efficiency. The business offers both standard and bespoke engineered solutions tailored to customer requirements, with a strong focus on innovation, durability and service support. At Hillhead, MES International will be showcasing their latest conveyor guarding systems, material handling solutions and site safety innovations designed to meet the evolving needs of the aggregates and mining sectors.

Metrol & Lesjöfors Heavy Springs

RB36

Metrol Springs & Lesjöfors Heavy Springs provide a comprehensive range of gas springs, heavy-duty springs, and industrial components. Together, they offer an extensive portfolio including gas struts, access hardware, industrial springs, Accuride slides, AVMs, threaded inserts, actuators, and heavy spring solutions designed for demanding high-load applications. The companies' combined expertise supports a wide range of industries. From single components to high-volume production runs, they deliver both bespoke and standard solutions. Metrol Springs specialize in gas springs and engineered components, while Lesjöfors Heavy Springs bring expertise in heavy-duty spring design and manufacturing. By combining engineering knowledge, global manufacturing capabilities, and responsive customer support, the companies provide reliable, high-performance solutions that meet the most demanding requirements for durability, performance, and cost efficiency.

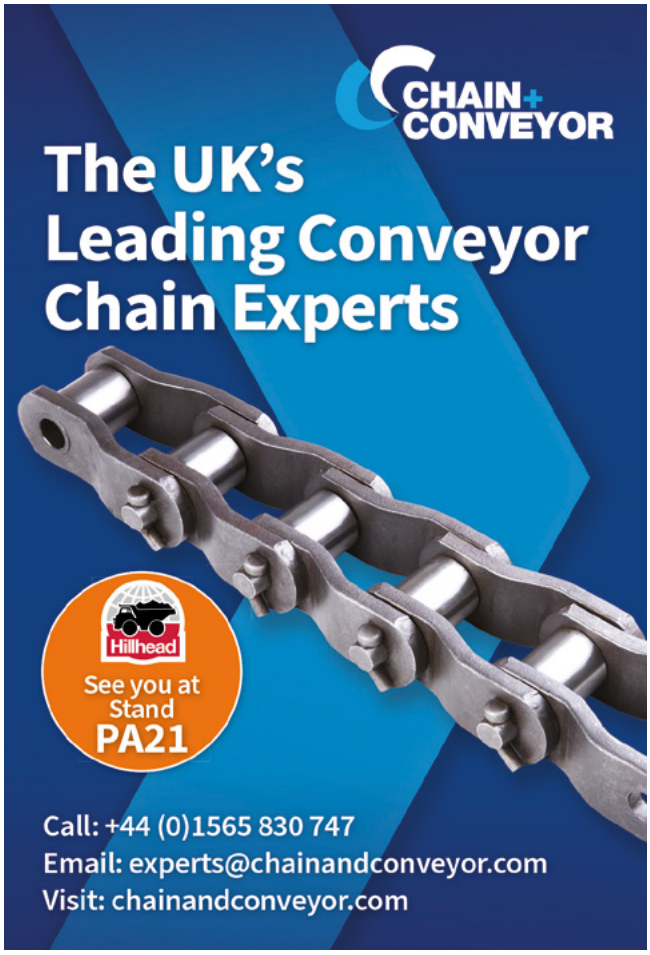
Mineral Engineering Processes Ltd

PB46

MEP specialise in mineral process engineering, providing sales and service for their specialist range of proprietary equipment, including hydrosizers, thickeners/clarifiers, hydrocyclones and other allied equipment. MEP are also the UK sales agent for the Pozzato range of log-washers, screens and crushers. Providing added value for clients is central to the company's work. MEP design and develop equipment and solutions for the beneficiation and classification of quality products created from raw minerals, the aim being to deliver the highest-quality service, on time and on budget, providing well designed, user-friendly plant and machines that exceed customers' expectations.

Unit 6 Wilton Business Centre, Kingsway, Wilton, Salisbury SP2 0AH; (01722) 744799; www.ukmep.com



Mineral Products Association
PB17
The Mineral Products Association (MPA) is the trade association for the aggregates, asphalt, cement, concrete, dimension stone, industrial sand, lime and mortar industries. With 135 producer members and 205 associate members, it spans 14 product groups and comprises the majority of independent SME quarrying companies, as well as the major international companies with UK operations, making it the largest sectoral voice for mineral products. MPA advocates for its members, representing the interests of the wider industry with all levels of government and a vast range of other stakeholders including mineral planning authorities, professional and trade bodies, conservation and environmental organizations as well as engineering and architectural practices. The structure, which includes the English regions and Wales alongside affiliate organizations representing the sector in Scotland and Northern Ireland, allows the MPA to engage with members and enter into dialogue with interested parties on key issues. MPA enables its members, supporting their licence to operate locally, regionally and nationally. Expertise and support spans health and safety; planning and mineral resources; environmental; economic and public affairs; regulatory, technical and standards issues at UK and European levels; transport; safeguarding and developing markets plus market information; carbon reduction; biodiversity and restoration and much more. As part of the MPA, The Concrete Centre provides material, design and construction guidance to help all those involved in the design, use and performance of concrete and masonry realize the potential of these materials.

MIT
M14
MIT specialize in OEM driveline integration and lifecycle support for high-duty machinery operating in quarrying, bulk handling and processing environments. Working at the design stage with equipment manufacturers, MIT define and integrate complete driveline systems tailored to duty cycle, application demands and long-term performance requirements. From torque management and gearbox selection through to system interfaces and commissioning, MIT support OEMs in delivering robust, reliable machines to market. Beyond initial build, MIT remain involved throughout the machine lifecycle, providing service, overhaul, genuine OEM parts and technical support to maximize uptime and inform future platform development. MIT represent leading driveline technology brands including Twin Disc, Katsa, Transfluid, and Quincy, supplying integrated solutions into applications such as mobile crushers, screeners, conveyors and pugmills. With proven OEM partnerships with major machinery manufacturers, MIT support repeat builds and long-term supply relationships across the UK and Ireland.

Mogensen
N11
Mogensen equipment, such as vibratory screens, sizers, and feeders are designed to separate, classify and move materials based on their size and/or density. This process is achieved by applying vibration to a deck which causes the material to move and, where appropriate, separate into different size fractions. The company generates these mechanical vibrations using either electric, pneumatic or hydraulic vibrator motors that are fitted with out-of-balance weights to create an unbalanced force. Mogensen supply multiple industries, including aggregates, mining and recycling. The business's experienced applications engineers work with customers to understand their exact requirements, gathering technical data through site visits, in-house materials testing and analysis, with the firm's design engineers modelling the equipment using the latest 3D design software, creating a unique set of drawings to meet exact individual requirements.

APM

APM are working with more customers who cannot rely on manual labour as part of their packing process.

The **AP4000** offers the next level of automation for Valve Sack Packing. Less reliance on manual labour, improved efficiencies and a more reliable supply.

Key Features:
- Fully enclosed, integral design
- High Speed Valve Sack Filling
- Built-in interlock safety system
- Minimal Operator Input

Suitable for:
- Quarries and Aggregates
- Processed Minerals
- Refractory Materials

Made in Great Britain

MPQC
PA2
The Institute of Quarrying is the professional membership organization for individuals working across the minerals, aggregates and related industries. It promotes excellence, innovation and best practice through professional development, networking and knowledge sharing. IQ supports its members with training, qualifications, technical resources and events, helping to drive safe, sustainable and responsible quarrying while strengthening professional standards across the sector. IQ will highlight the recent National Occupational Standard (NOS) update, the Diploma in Explosives Surface Mining Engineering course, and the value of becoming an IQ member. Visit stand PA2 to meet the team and find out more about IQ, its membership benefits, education and training opportunities. Also, on the stand MP Connect will be demonstrating their workforce platform, which audits drivers and contractors entering sites, to ensure they are suitably qualified and inducted to work in specific environments. MP Connect also includes a cost-effective assurance tool for businesses. In addition, MP Awards will be on hand to explain the review of the existing Safety, Health and Environmental (SHE) standards and qualification frameworks. The updated standards have been developed through a structured and collaborative approach, bringing together quarry operators, training providers, awarding organizations, trade organizations, and professional institutions.

DSEM810
10” Programmable Display
(Non-Keyed / Keyed Variants)

Stone crushers are essential in quarry and construction environments, forming the backbone of material processing operations. They break down rocks into consistent, usable aggregates required for a wide range of infrastructure projects. By enabling high-throughput production while maintaining material quality, stone crushers help maximise operational efficiency, reduce handling time, and keep site operations running safely and economically under demanding conditions.

The DSE**M810** programmable display provides a powerful and flexible control interface for stone crusher applications. Designed for harsh environments, it enables clear monitoring of machine performance, load conditions, and system diagnostics. With robust CAN connectivity and a configurable HMI platform, the DSE**M810** supports precise control, improved uptime, and a consistent operator experience across complex crushing and screening systems.

H22
Nidec DESCH Antriebstechnik GmbH & Co. KG are the global market leader in special drive systems and offer products, system solutions and services along the entire drivetrain. The company is renowned for its gear and clutch technology for presses, mobile machinery, recycling applications, machine tools, marine, agricultural machinery and municipal technology, robotics and automation, aluminum and steel and renewable energies. Additionally, Nidec DESCH develop future-oriented and sustainable technologies. For example, Nidec DESCH drives are used in tidal power plants, as well as recycling plants for waste disposal. Nidec DESCH can test and monitor all drives on their in-house test benches. The service centre offers repairs of industrial gearboxes and couplings of all kinds, as well as system-oriented maintenance, complete and independent of the manufacturer for the entire drive train. Other core areas are machine diagnostics and condition monitoring, engineering, technical support, and remote video support. As a global company, Nidec DESCH have additional locations in Canada, America, China, Northern Ireland and Italy.

Ninehundred Communications Group Ltd
V5
Ninehundred Communications provide integrated safety, security, and communication solutions for construction and quarrying environments, helping sites operate safely, efficiently, and in full compliance. With more than 45 years' experience, the company supports projects of all sizes with tailored systems including two-way radios, push-to-talk connectivity, lighting towers, CCTV, and emergency response equipment. Its solutions are designed for demanding and remote environments, combining reliable communication, high-performance lighting, and off-grid security to protect people, assets, and productivity. From rapid deployment systems to fully customized site setups, Ninehundred Communications ensure workforces stay connected, visible, and safe at all times.

NOCN Group / CPCS
PD10
The Construction Plant Competence Scheme (CPCS) is the UK's leading industry-standard card scheme, designed to demonstrate the skills, training and competence of plant machinery operators. Owned by NOCN Group and launched in 2003, it plays a central role in maintaining safety and capability standards across construction sites, spanning more than 60 plant categories, from excavators to cranes. As part of NOCN Group's broader commitment to skills development and quality assurance, CPCS is supported by a wider ecosystem of training and certification. This includes NOCN Assured Courses, which provide independent recognition for bespoke or specialist training programmes that sit outside standard qualifications. Assured Courses complement CPCS by offering a flexible route for recognizing high-quality, industry-relevant training. Together, they help ensure operators not only meet core competence requirements, but also develop additional skills that reflect evolving industry needs and site-specific demands.

Northern Ireland
PD35
Invest Northern Ireland (Invest NI) is the economic development agency for Northern Ireland. The UK's largest quarrying, construction and equipment exhibition is a key event for Northern Ireland's globally celebrated original equipment

manufacturers (OEMs) and supply chain companies. Invest NI are proud to host 18 companies showcasing their latest offerings on a dedicated Northern Ireland stand. A further 30+ Northern Ireland companies will be exhibiting, all offering a wide range of new products, cutting-edge technologies and innovative trends helping to shape the industry's future.
Bedford Square, Bedford Street, Belfast BT2 7ES; (028) 9069 8000; www.investni.com

Nova Innovation

PA13

Nova provide a 'one-stop-shop' for floating solar, allowing low-cost renewable energy to be produced on a water body. Floating solar reduces energy costs, improves energy security and lowers grid dependency. It also preserves land for site operations, allowing under-utilized water surfaces to become valuable energy assets. Nova deliver a fully integrated service spanning feasibility, system design, consenting and planning, installation, and operation and maintenance. Floating solar is delivered seamlessly with minimal disruption to site operations. Nova's robust systems are developed by a skilled team of engineers and energy specialists who have over a decade of experience generating energy in the water environment.

NPORS

PC8

NPORS is one of the UK's leading accreditation and registration bodies for plant, machinery and powered work equipment. Through the NPORS Card Scheme – including the NPORS Operator Card and NPORS CSCS Cards – NPORS helps operators gain recognized, industry-relevant skills. NPORS-accredited training and testing supports safer, smarter and more efficient operations. With courses covering everything from earthmoving machinery to transportation and site health and safety, NPORS provides the skills frameworks modern sites rely on. Training is delivered through a nationwide network of NPORS Accredited Training Providers. Courses can be run on site using the client's own machinery or at a dedicated training centre. All providers and instructors are rigorously monitored and audited to ensure consistent NPORS standards.

NTN

RD10 / PB10

NTN Europe are global bearing and power transmission experts, delivering maintenance solutions dedicated to mines and quarries. From conveyors to crushers, grinders and screeners, the company's products are designed for harsh environments with dust, humidity, heavy loads and intense vibration.
For conveyors, NTN's patented ROX spherical roller bearings with metallic shields, combined with SNC plummer block housings, advanced sealing solutions and MagicSleeve, make it easier to remove the bearings, help extend bearing life, cut grease consumption and reduce downtime.
For grinders, crushers and screeners, NTN's EF800-series bearings with solid brass cages ensure excellent shock resistance and stable operation.
To secure long-term performance, NTN offer Drive Booster single-point lubricators, heavy-duty/VIB greases for severe conditions, and AGR sealed inserts with grease-for-life technology for less heavily loaded equipment.
By combining advanced bearings, housings, sealing and lubrication, NTN Europe provide integrated, field-proven solutions that keep mining and quarrying equipment running reliably.

Exhibitors A-Z

Omega's J1065T tracked jaw crusher

O'Kane Equipment Solutions Ltd

J11 / E11

O'Kane Equipment Solutions will appear as a co-exhibitor alongside Astec Industries Europe, marking the official arrival of the Astec Frontier range across Scotland and the north of England. Built on more than 106 years of engineering heritage, Astec equipment is designed for the toughest quarrying and recycling environments in the world. That reputation is already being proven on some of the hardest Scottish rock with Astec machines now actively operating in demanding high-output applications across Scotland. Led by Kieran O'Kane, who brings more than 35 years of industry experience, O'Kane Equipment Solutions combine deep application knowledge with a customer-focused approach, understanding that the material, the application, and the customers end goals are central to delivering the right solution. Together with Astec, O'Kane Equipment Solutions are dedicated to delivering high-performance equipment engineered for reliability, productivity and maximum uptime.

Odour and Dust Solutions Ltd

B14

Odour & Dust Solutions (ODS) are a trusted partner for dust suppression and odour control, creating cleaner, safer, and more comfortable environments. With growing awareness around air quality, workplace safety, and environmental responsibility, controlling dust and odours has never been more important. ODS specialize in delivering tailored solutions that effectively manage airborne particles and unpleasant smells, helping customers maintain compliance, workforce protection, and improve overall operational efficiency. Whether operating in quarries, demolition or construction, the company's expertise ensures that specific challenges are met with precision and reliability. Setting ODS apart is their commitment to innovation and customer satisfaction, working closely with each client to assess their needs, recommend the most effective systems, and provide ongoing support to ensure optimal performance. ODS supply and deliver nationwide and offer flexible hire and sales options.

OKO Tyre Sealants

RA22

OKO – the original British tyre-sealant manufacturer – export to more than 90 countries and are expanding every year. Independently verified as carbon-negative, OKO tyre sealant helps users reduce emissions, tyre waste, and fuel use, while saving money through fewer punctures and extended tyre life. Originally developed to protect agricultural vehicles from costly downtime, the company has evolved into a global leader in puncture-sealing technology, trusted by a range of industries. OKO's unique tyre sealants, which are available in a wide range of sizes, including cost-effective 5-litre workshop cans and 25-litre drums, are engineered for lasting performance, sealing punctures instantly and keeping vehicles operational in the toughest environments.

OMEGA Crushing & Screening

C23

Omega Crushing and Screening are a fast-growing manufacturer of mobile crushing and screening equipment, known for robust engineering, efficient design, and operator-focused innovation. Built in Northern Ireland, Omega machines are designed to deliver high performance in quarrying, recycling, and demolition applications worldwide. On show, the J1065T tracked jaw crusher is Omega's flagship machine, combining durability with high-output performance in a compact, mobile platform. Designed for reliability in demanding environments, including quarrying, recycling, and demolition applications, the J1065T delivers consistent output while minimizing downtime and operating costs. Omega are continuing to expand their product range, with other new developments launching later this year, including a highly efficient scalping solution and a next-generation jaw crusher featuring

a large jaw capacity, aimed at higher throughput operations and larger feed material, extending Omega's offering into heavier-duty applications.

Optimum Safety Systems Ltd
B2
Optimum Safety Systems (formerly known as Ogden Safety Systems) were founded in 1981 in response to a number of fatalities in open-pit mining in the UK. Since then the company has constantly developed its anti-collision systems, applying state-of-the-art techniques to the design of its radars and control systems. Optimum radars are used in a wide range of applications and industries, including quarrying and waste. The company's approach is one of continuous development, building on years of experience and taking advantage developments in microwave components and digital signal processing.
Unit 1 Kingsmark Freeway, Oakenshaw, Bradford BD12 7HW; (01937) 836395; www.ogdensafetysystems.com

Orica (UK) Ltd
PA38
Orica are one of the world's leading mining and infrastructure solutions providers. From the production and supply of explosives and blasting systems to their cutting-edge digital solutions and comprehensive range of services, Orica sustainably mobilize the Earth's resources. The company's vision is to transform how drilling and blasting is used to unlock mining value, utilizing digital and automated technologies to create safer and more productive blast outcomes for customers. The company's technical specialists will be showcasing Orica's latest products and services, such as Exel Neo – the world's first fully lead-free non-electric detonator range, the WebGen wireless initiating system, the next generation of digital technologies and solutions beyond blasting, and Orica's superior rock-on-ground service.

Next-generation IoT gateways from Owasys help deliver smarter, connected fleet operations

Orthos (Engineering) Ltd
C15

Orthos Engineering will present a fluid-bed dryer from their partners TEMA Process BV, engineered for efficient drying and cooling of industrial minerals. TEMA's shaking fluid-bed technology offers a more energy- and cost-efficient alternative to conventional drum and belt dryers. Systems can operate with direct-fired heat (gas or light oil), recover waste heat via exchangers (eg CHP exhaust), or run fully electric, helping to minimize energy costs and CO_2. In-house dust filtration is also available as part of the TEMA range. Also on display is the KTS 2000 tumbler screener from partner GKM Siebtechnik GmbH, designed for precise separation and dedusting of dry powders and granular materials. It excels at high feed rates and multi-deck screening of fine, lightweight, and difficult products. Backed by decades of screening expertise, GKM deliver reliable, high-capacity solutions across industries. Specialists from Orthos, TEMA Process, and GKM Siebtechnik will be available to discuss specific application requirements.

Parmley Graham Ltd
RB26

Parmley Graham are UK industrial automation specialists helping organizations, including those in quarrying, construction, and recycling, improve efficiency and safety through their advanced automation technologies and expert support. The company delivers PLC and SCADA systems that allow real-time visibility across conveyors, crushers, screens, wash plants, and loading systems. Predictive maintenance and optimization tools help cut downtime, improve throughput, and support compliance with safety and environmental standards. Parmley Graham's RTLS (real-time location system) deploys wireless tags, sensors, and software to track the precise, live location of assets automatically. The firm's industrial-grade sensors, fault-tolerant control systems, safety hardware, and robust communications networks are built for harsh environments, reducing risk and lowering the total cost of ownership. Parmley Graham's engineers support upgrades, system integration, and Industry 4.0 transitions, with application engineering, on-site consultation, workshops, and full lifecycle support – tailored to real-world site demands. The business is also the UK's largest Siemens approved platinum partner and value-added reseller.

Pioneer Pump are specialists in the design, manufacture, hire and sale of high-performance industrial pumps

Pilot Crushtec International
M3

Pilot Crushtec International have more than three decades of experience in the crushing, screening and materials handling industry, not only as an approved distributor of world-class brands such as Metso, Jonsson and Edge, but also as an innovator and manufacturer of mobile crushers and fixed modular processing plants through their own engineering, design and manufacturing capability. With a history in designing and manufacturing fixed and mobile VSI crushers, Pilot Crushtec's ability and experience has grown in scope to include a full range of world-class mobile and fixed crushers, screens, conveyors and scalping screens to suit contractors, mines and aggregate producers. Pilot Crushtec are pioneers of modular processing plants, with a full range of pre-designed modules kept in stock, incorporating Metso crushers and screens. These premium plants range in capacity from 100 tonnes/h to 2,000 tonnes/h. Also known for their after-market services, machine refurbishments, repairs and parts stock availability across their own and supported brands, Pilot Crushtec operate across southern Africa with a large production workshop, warehouse and office facility in Johannesburg.

Pioneer Pump
A19

Pioneer Pump are one of the leading specialists in the design, manufacture, hire and sale of high-performance industrial pump solutions across Europe, the Middle East and North Africa. Founded in the US in 1998 and with a dedicated UK division since 2002, the company has built more than 3,500 pump packages and exported thousands of units to more than 30 countries, establishing itself as a trusted partner in challenging environments. Pioneer's centrifugal, self-priming, wet prime, electric and diesel-driven pumps are engineered for excellence in quarrying, mining, wastewater, industrial, agricultural and municipal applications, combining rugged construction with industry-leading hydraulic performance for superior flow, head and efficiency. Pioneer's comprehensive product portfolio supports both purchase and rental needs. A broad range of pumps and packages – including portable diesel and electric units in various configurations – are available for hire, allowing flexible, short-term deployment for project work or emergency response. Whether looking to buy or hire high-quality pump equipment, Pioneer act as a single source for robust, efficient fluid-handling solutions that keep operations moving.

Plant Parts Ltd
PD1

Established in 1991, Plant Parts are one of the UK's largest independent construction machinery part stockists, supplying quality components to machine owners, dealers and repairers in more than 100 countries. The company's vast range supports over 150 brands of tracked and wheeled machinery, with a large stockholding of final drives, swing drives, hydraulic pumps, recoil spring assemblies and slew rings. As well as parts supply, Plant Parts' on-site workshop facilities provide expert repairs for various industries including quarrying, construction, earthworks, demolition, civil engineering, waste recycling, concrete and many more. At Hillhead 2026, Plant Parts will be launching 'The Rig' – a world-first hydraulic motor test facility. Representing an investment of around £1 million, the largest single project in Plant Parts' 30+ year history, this purpose-designed facility for swing drive and final drive hydraulic motors offers load testing up to 132kW; coverage for motors from 18cc to 340cc; simulation of real-world operating conditions; fully automated, single-operator testing; and advanced data acquisition and performance reporting.

Polygonmach
RB16

Polygonmach are Turkish manufacturers of machinery and plant for the global quarrying, mining, construction, road-building, and related industries. The company designs and produces crushing and screening plants, sand-washing systems, tracked and wheeled crushers and screens, as well as asphalt and concrete batching plants. Polygonmach also manufacture bulk material handling and storage equipment, including feeders, conveyors, silos, and stock systems, providing complete solutions for aggregate production and infrastructure projects. With engineering, manufacturing, and installation experience in numerous international projects, Polygonmach deliver both standard and customized plants, ensuring reliability, efficiency, and ease of maintenance. At Hillhead 2026, Polygonmach will present their latest solutions for aggregate processing, mobile crushing and screening, and mining applications.

Power Systems Research
PE3
Power Systems Research (PSR) are a leading source of global production, forecast, and population data for equipment and vehicles powered by IC engines, electric, and hybrid powertrains. PSR collect and analyze global engine and powertrain data and use it to develop targeted forecasts by industry segment and region. PSR's team of experienced analysts works with OEMs, engine and component manufacturers, dealers, fleet managers and industry experts to compile detailed, focused data that has become an industry standard. This data covers IC engines, battery-electric and hybrid-drive powertrain technologies for on- and off-road vehicles and equipment. Using PSR's proprietary databases, clients can easily filter annual engine manufacturer volume data to create custom reports to meet their exact needs, eliminating guesswork and minimizing risk. PSR's analysts combine their data with industry intelligence to create unique, spot-on solutions to meet clients' needs. Custom surveys and syndicated surveys are produced by industry specialists from PSR's in-house call centre.

Process Control Services UK Ltd (PCS)
PC16
Process Control Services UK Ltd (PCS) are specialists in electrical and data engineering, supporting industrial sites, including the aggregates and cement industry, with reliable, compliant, and efficient control and safety solutions. Headquartered in Buxton, Derbyshire, PCS are positioned at the heart of the UK quarrying sector and understand the operational challenges across extraction, processing, and material handling environments. PCS provide a comprehensive range of services, including DSEAR and ATEX solutions for hazardous environments, inspection and testing, and planned maintenance to support compliance and reliability. The company delivers major installation works, including capex projects, lifecycle asset replacements, and power and lighting installations. The acquisition of BJ Control Panels has strengthened PCS's capability to modernize legacy control systems. The company's specialist team works in partnership with customers to design and manufacture high-performance control panels that integrate seamlessly into their operations.

Procon Engineering – NOV
RB32
Procon will be showcasing their expertise in belt weighing, calibration services, and integrated weighing solutions for the aggregates and minerals sector. Visitors to the company's stand will see how Procon's belt weighing systems deliver accurate, repeatable measurement of bulk materials, helping operators optimize production, control inventory, and improve process efficiency. The team will also highlight Procon's accredited calibration services, demonstrating how regular on-site calibration and verification support compliance, reduce downtime, and protect revenue. Additionally, Procon will present a range of weighing and automation solutions designed for harsh quarry environments, focusing on reliability, serviceability, and long-term performance. With decades of experience supporting quarry operators across the UK and internationally, Procon combine proven technology with practical engineering know-how. Hillhead provides visitors with the opportunity to discuss specific applications, challenges, and upgrades, and to learn how Procon can help deliver confidence in weighing accuracy and operational control.

ProSpare Ltd
F6
ProSpare help solve key process problems for companies handling bulk materials and powders. The company's Bulk Materials Handling division has successfully improved conveyor performance throughout UK with STARCLEAN, CenTrax, and SealTek products. Celebrating the team's 10th anniversary, on the stand at Hillhead 2026 will be ProSpare's largest display of belt conveyor components, led by the recently introduced range of STARCLEAN HD heavy-duty belt cleaners. STARCLEAN HD is designed to perform in the most demanding of applications and is already performing well at several UK projects. Other highlights on the stand will include: Hydronix moisture measurement for asphalt producers – to precisely measure moisture and make real-time adjustments, reducing both the cost and environmental impact of production; automated high-pressure cleaning of IBCs – reduced cleaning time and increased safety with WALTER; reduced dust at connection points and during bulk bag loading with BFM fittings; and high-performance mixing with TEKA.

Recycleye Ltd
PB49
Recycleye deliver AI-powered sorting equipment and analytics designed to improve efficiency and profitability in waste-management operations worldwide. The company's solutions combine advanced computer vision, proprietary AI models and precision engineering to automate material detection and recovery across complex waste streams. QuantiSort, the company's optical sorting system, is built to perform reliably in real recycling conditions, identifying materials with high accuracy even on fast-moving, contaminated lines. Alongside this, the QualiBot robotic system enhances sorting performance through consistent picking, high uptime and reduced reliance on manual labour. Together, these technologies create an integrated ecosystem that increases material purity, boosts recovery rates and lowers operational costs. With real-time analytics providing insight into material composition and system performance, Recycleye allows operators to make smarter decisions and unlock higher-value outputs. Across Europe and the US, the company is helping redefine the economics of recycling through intelligent automation and data-driven performance.

Rehobot Ltd
PB55
Rehobot Hydraulics AB are a Swedish hydraulics company with more than 100 years' experience in the development and manufacture of high-quality, high-pressure hydraulic products and systems for use across the service and maintenance sectors. The UK business Rehobot Ltd will be attending the show for a second time to highlight the company's products, which include hydraulic pumps, cylinders and tools. On display will be the TPP63 hydraulic track pin press, a time-saving tool used in situ to safely remove and install the end bolt on excavator track chains. Also on display will be sister company Simson Hydraulics AB's compact jacks.
Unit 6-7 Stechford Trading Estate, Lyndon Road, Stechford, Birmingham B33 8BU; (0121) 7897707; info@rehobot.co.uk; www.rehobot.se/en/

D-GEO
Derbyshire Geotechnical Ltd

Rope Access Geotechnical Services

Derbyshire Geotechnical Ltd provides safe, high-quality, and cost-effective rope access geotechnical services to the quarrying and civil engineering industries.

Specialising in slope stabilisation and rockface protection, we deliver reliable solutions in challenging environments using highly trained rope access technicians and industry-leading installation methods.

Our Services Include:

- Slope Stabilisation
- Rockface Protection Systems
- Rope Access & Drone Inspections
- Maintenance of Installed Rock Protection Infrastructure
- De-vegetation & Tree Removal
- De-scaling & Rock Removal
- Anchor & Mesh Installation
- Soil Nails & Geotextiles
- Debris Fences & Catch Fences

With extensive industry experience, Derbyshire Geotechnical Ltd is recognised as one of the quarrying industry's most experienced and specialist rope access installation contractors.

We are committed to delivering safe, efficient, and practical geotechnical solutions to the highest health and safety standards, offering exceptional value for money without compromising on quality.

A hydraulic manifold control from Related Fluid Power

Reich Drive Systems UK Ltd
PD34

Reich Drive Systems UK Ltd (RDS UK), a wholly owned subsidiary of Reich GmbH, will be displaying their range of power transmission coupling solutions for the construction machinery market, including the new FL-SP for hydrostatic drives. The company will also be exhibiting its range of electro-magnetic clutches and brakes and spare plates, used extensively in mobile plant and cranes. RDS UK's experienced team will be on hand to discuss application requirements and, backed by the business's 'D2C Design to Customer' programme, will be sure to have a solution to visitors' power transmission needs.

Unit 4 Bankside Business Park, Coronation Street, Stockport SK5 7PG: (0161) 714 4191; info@reich-uk.com; www.reich-uk.com

Related Fluid Power
PA30

Related Fluid Power are experts in the design, manufacture and supply of high-performance hydraulic power units, manifold systems, cartridge valves and flow dividers for OEMs worldwide. The business specializes in compact, efficient and reliable hydraulic solutions for demanding applications across quarrying, construction, mining, recycling, industrial and marine sectors. With full in-house design, CNC (computer numerical control) machining, assembly and testing capabilities, Related Fluid Power deliver complete turnkey hydraulic systems, from concept and prototyping through to production and long-term support. The company's engineering-led approach ensures optimized performance, reduced energy consumption, simplified installation and long-term system reliability in the harshest operating environments.

Rock Extraction Ltd
X13
RKX - Rock Extraction Ltd make their world debut at Hillhead 2026 with the launch of the RKX-Volt 100k – groundbreaking, disruptive technology that delivers a unique technical breakthrough in primary rock fragmentation. This fully electric breaker replaces or complements conventional drilling and blasting. Powered by British technology, the lightweight RKX-Volt 100k weighs just 3 tonnes yet delivers 100,000 joules of single-strike energy, equivalent to 17 grams of commercial explosives and 20 times the impact of a hydraulic hammer. Compatible with any 20-tonne-class excavator carrier, it features native telemetry and data collection for targeted maintenance. Designed to operate without explosives, blast shock, or vibration to the breaker or carrier, it performs where blasting is prohibited, impractical, or under growing regulatory pressure. Eliminating the full blast cost chain delivers significant cost reduction and operational simplification, whilst fully electric operation produces no noise, dust, or vibration pollution, providing a cleaner, greener alternative to traditional blasting.
Suite 723, 6 Enterprise Crescent, Lisburn BT28 2YU; (028) 9279 3877; enquiries@rockextraction.co.uk; www.rockextraction.co.uk

ROCO
E8
ROCO are a trusted name in the crushing, screening, and recycling industry, known for delivering high-quality machinery built for efficiency and durability. ROCO provide solutions that support a wide range of applications including quarrying, demolition, recycling and material processing. With a strong focus on customer support and machine reliability, ROCO continue to grow their global presence through partnerships, demonstrations, exhibitions, and on-site commissioning projects worldwide. The company's expanding product range is fully hybrid electric, designed to maximize productivity while reducing operational and fuel costs. ROCO also place a major emphasis on innovation, sustainability, and building lasting relationships with customers and dealers across the globe.

RSP UK
A22
RSP UK were founded in 2016 as the UK subsidiary of the RSP Group, who started manufacturing premium suction excavators in 1993 when production began in Saalfeld, Germany. Since their inception, RSP UK have grown to a team of more than 40 employees and established themselves as a trailblazer in technologies that enhance safety and efficiency across the UK's construction, engineering, and utilities sectors. Aiming to deliver the benefits of emission-free suction on a wider scale, in 2022 the company showcased its fully electric solution with the launch a world-first suction excavator with breaker boom, followed by the introduction of the first dual-tipping suction excavator to the UK market. Building on this momentum, 2023 marked the company's most exciting year to date, with significant sales growth and an expanded product range. The company's portfolio now includes RSP suction excavators, Amphitec vacuum excavators, and BROCK road sweepers.

Shakti Mining Equipments PVT Ltd

D17

Shakti Mining Equipments Pvt. Ltd have been a leading Indian manufacturer of jaw crushers since 1986. The company also serves as a trusted OEM partner to renowned European manufacturers of tracked crushers and construction and demolition waste-recycling equipment. Shakti Mining's comprehensive product portfolio includes mini-jaw crushers, modular heavy-duty jaw crushers, secondary impact crushers, cone crushers, crusher consumable castings, and allied fabricated components such as steel skids for tracked crushers. With decades of crusher design expertise and in-depth technical knowledge, Shakti Mining operate state-of-the-art manufacturing facilities comprising a dedicated design center, an in-house steel casting unit, a CNC machine shop, advanced robotic welding systems, and a highly skilled engineering team. Over the years, Shakti Mining have played a pivotal role in supporting European manufacturers by delivering high-quality, precision-engineered crusher solutions. Committed to durability, performance, and adherence to global quality standards, Shakti Mining consistently provide reliable and performance-driven crushing solutions to customers worldwide.

SRL Traffic Systems
N12
SRL Traffic Systems (SRL) are one of Europe's leading designers, manufacturers and hirers of temporary intelligent transport systems (ITS) equipment. The company's core product portfolio includes advanced temporary traffic signals, industry-leading variable message signs (VMS), and a range of site safety and security solutions designed for demanding operational environments. Within the quarrying, construction and recycling sectors, SRL support safer, more efficient site operations by improving control of vehicle movements, reducing on-site labour requirements, and enhancing segregation between plant, vehicles and pedestrians. This includes innovative, solar-powered and remotely operated traffic signals such as SolarLight and SolarLight REMOS, alongside highly visible site safety systems including CLD barriers and adaptable VMS. Haul Route PLUS is SRL's integrated haul route crossing solution, combining multiple ITS technologies – including traffic signals, large high-speed VMS, barriers and CCTV – to improve safety and efficiency while reducing maintenance requirements and emissions. Supported by a strategic nationwide depot network and available for hire or purchase, SRL's solutions help improve safety, reduce congestion and support more efficient and sustainable working practices across complex operational environments.

Tarmac
H1
Tarmac – the UK's leading sustainable building materials and construction solutions business – have more than 150 years' experience and offer a diverse range of products and services to the construction sector; solutions that span aggregates, asphalt, concrete, cement, powders, recycling services and building products. Tarmac also operate the UK's largest PAVE technology contracting services. Contributing to many of the UK's major infrastructure developments, Tarmac are part of CRH plc, an international leader in building solutions that build, connect and improve the world. Tarmac are also proud to support the industry with their Ofsted-accredited National Skills & Safety Park. Opened in 2020, this industry-leading training facility for people working across the construction sector is located at an active quarry near Mansfield, in Nottinghamshire, to provide first-class, practical training for emerging industry talent – including apprentices, graduates and those retraining from other sectors. The Park has welcomed more than 20,000 visitors undertaking learning since its opening, through face-to-face, virtual classrooms and e-learning sessions. The Tarmac team will be delighted to talk to Hillhead visitors about the range of courses available.

Technidrive
PB24
Founded in 1998, Technidrive supply industrial drive and automation solutions to the quarrying and recycling industries across the UK and Ireland. With decades of experience, the company has built a strong reputation for delivering reliable solutions and technical support tailored to customer requirements. Technidrive specialize in electric motors, industrial gear units, variable-speed drives and electrical automation. As a WEG Premier Partner and Bonfiglioli BEST Partner, the company operates a modern assembly centre and holds one of the largest industrial drive stocks in Ireland. At Hillhead 2026, Technidrive will be exhibiting alongside longstanding partner WEG and showcasing a range of industrial drive and automation technologies, including an innovative jaw crusher automation system, designed to improve safety, reduce downtime and support more efficient operation in demanding quarry environments.

CEA CONSTRUCTION EQUIPMENT ASSOCIATION

FOR THE INDUSTRY, BY THE INDUSTRY.

We support our members to achieve industry excellence through market and technical information and insights, networking, trade shows, exhibitions and events, and lobbying work with the UK and European Parliaments.

We are represented in Brussels as active members of the Committee for European Construction Equipment. Our influence is felt worldwide through our technical, regulatory and international trade work. Membership is open to all UK based OEMs, distributors, attachments and components manufacturers, and service providers operating in the construction equipment machinery sector.

Technogenia UK – Laser Cladding Technology Ltd
PC14

Technogenia are leading providers of hardfacing solutions - laser cladding process and welding consumables. The company's laser cladding technology, Lasercarb, was developed for strategic application of Technolase powders to the OD and ID of critical components to extend wear life. Technogenia's torch and MIG-applied welding products are also the leading products against abrasion, erosion, impact and corrosion. Benefits of cast spherical tungsten carbide Spherotene products include: high hardness: 3000 HV † 500, metallurgical bond, Spherotene is not affected by LaserCarb, low heat-affected zone, large range of thickness of deposit.

Technowell Europe Ltd
PC52

Technowell manufacture custom electro-hydraulic steering assembly solutions for the heavy-duty off-highway vehicles market, working within the construction, agricultural, industrial, forklift and electric vehicle sectors. The design and manufacture of customized electrical forward reverse shifters and electrical multi-function on turn signal indicators to suit customers' specific requirements is the company's key strength, with expertise stemming from more than 20 years' experience designing and installing electrical shifters, hydraulic steering units, steering wheels and steering columns. Technowell specialize in component parts as well as complete integrated solutions.
18 Bryggen Road, North Lynn Industrial Estate, Kings Lynn PE30 2HZ; (01553) 765927; www.technowell-europe.com

TEDD Engineering
L2

For more than 30 years, TEDD Engineering have delivered design and manufacturing services tailored to the unique needs of clients across multiple industries. The company's expert team works in partnership with clients to provide smart, effective solutions at every stage of a project – whether developing a new concept, refining an existing system, or addressing operational challenges. As a leading provider of advanced, bespoke control systems, TEDD Engineering offer peace of mind from concept through to completion. Their in-house team combines mechanical engineering, software development and graphic design expertise to bring clients' specifications to life. The company is committed to achieving the best results at every stage, from prototyping through to full-scale manufacturing, supported by ongoing technical assistance and comprehensive after-sales service.

Tek Seating Ltd
B19

KAB Seating offer a full range of quality vehicle seats, ideal for all construction vehicles, to improve driver safety and comfort. TEK Seating, KAB's official distributor at Hillhead, will be showing a wide range of seat options to suit a variety of requirements. KAB's core range of seats feature suspensions designed to reduce the risk of back and neck injuries by removing harmful vibrations. TEK will be showing some of KAB's most popular seats, including the high-spec KAB 600 series featuring high- and medium-back air suspension, the KAB 86/K4C air-suspension seat with 12V or 24V compressor or manual controls, the robust KAB 525P air and mechanical suspension seats with pods and back angle, height, tilt and driver weight adjustment, and the economical 211 and 214 seats. KAB manufacture products for many industry sectors, including construction and material handling, which can be supplied by TEK.

Tele Radio
PD15

Established in Lysekil, Sweden in 1955, Tele Radio are a market leader in the design and manufacture of wireless radio remote-control solutions, providing end-to-end product solutions and services in the field of wireless equipment control and machine communication. With a broad range of products, from small transmitters to big joystick platforms, Tele Radio offer a bespoke service to adapt products to suit customers' needs. At Hillhead 2026, Tele Radio will be showcasing a range of products from simple push-button controls to complex, customizable, proportional hydraulics and camera feedback systems. Tele Radio's industrial remote controls are designed to improve efficiency and safety in the quarrying and construction industry, providing precise and easy-to-use control for machinery and equipment.

Telestack Ltd
E11

Telestack are celebrating 25 years as a global leader in mobile bulk material handling solutions. The company designs and manufactures innovative equipment that improves efficiency, reduces operating costs, and enhances flexibility across quarrying, mining, ports, and aggregates industries. Telestack's range includes radial telescopic conveyors, tracked conveyors, bulk reception feeders, and mobile hopper systems, all engineered to maximize stockpile capacity, minimize material degradation, and support site mobility. Hillhead visitors can gain expert insight into improving productivity, reducing reliance on traditional haulage, and adopting more sustainable, lower-emission solutions.
Bankmore Way East, Bankmore Road, Omagh, Co. Tyrone BT79 0NZ; (028) 8225 1100; sales@telestack.com; www.telestack.com

TEMA Isenmann Ltd

F10

TEMA Isenmann offer a complete line of screening wear-management systems designed for efficient, productive separation of materials ranging in size from fine powder to primary scalping, all of which are made to customer specifications with apertures from 0.1mm to 250mm. The company offers the most durable open cast or injection-moulded polyurethane modules, the longest service life, consistent product quality and accuracy of separations, a wide choice of urethane hardness, the widest selection of aperture sizes and shapes, any panel length, and reduced noise. Because downtime is costly, TEMA Isenmann stock a vast variety of screens that can be shipped the same day from their Northamptonshire facilities, whilst the company's extensive representative and service network is available for wear management contracts, emergency troubleshooting, installation assistance as well as follow-up and order tracking. TEMA Isenmann are part of a worldwide group of companies that includes: Steinhaus GmbH; Isenmann Siebe GmbH; TEMA Group and Multotec Group.

TEMA Process B.V.

C15

TEMA Process specialize in the design and manufacture of thermal processing equipment, with a focus on fluidized-bed systems for mineral drying applications, including sand, gravel, limestone, clay, and salt. TEMA's shaking fluid-bed technology supports both drying and cooling, delivering precise control of final moisture and product temperature. The robust drive mechanism ensures uniform processing across a wide particle size range (110 microns to 10mm) without disturbing the fluid bed, with capacities up to 100 tonnes/h. Optimized for mineral processing, TEMA fluid-bed dryers can integrate cooling and heat recovery, reusing energy from the cooling zone to improve efficiency and product quality. Fully electric operation is also available, allowing low-energy, CO_2-neutral drying solutions.

Ir. R.R. van der Zeelaan 5, JH Wapenveld, 8191, Netherlands; +31 88 5225800; mh@temaprocess.com; www.temaprocess.com

Tennant Company

C2

Tennant are a trusted cleaning machine supply partner with extensive experience working directly with major suppliers of aggregates, asphalt materials, cement, ready-mixed concrete and pre-cast concrete blocks. The company's wide range of industrial cleaning machines includes products designed to thoroughly clean large areas as well as more compact spaces, such as staff canteens and offices. Tennant heavy-duty sweepers and cleaning systems are designed to meet all of these challenges, helping to maintain air quality by reducing airborne dust and debris. Features such as large hoppers and automated dumping plus easy-to-use controls improve productivity by allowing operators to clean efficiently and safely. Employees and facilities are protected from potentially harmful dust with Tennant's twin-vacuum, all-weather dry dust control system with PM-10 certification.

Terex MPS

L4

Terex MPS produce a range of crushing and screening equipment to suit all crushing and classifying needs. Whether on the move, needing a temporary solution, or running a large static operation, Terex MPS have the equipment to meet these needs.

200 Coalisland Road, Dungannon, Co. Tyrone BT66 6SY; www.terex.com/mps

Terex Washing Systems

L6

Terex Washing Systems (TWS) are a global leader in material washing and water-management solutions for the aggregates, mining, recycling, and construction industries. With a comprehensive portfolio of modular, mobile, and static equipment, TWS deliver engineered systems that maximize operational efficiency, sustainability, and profitability. Their innovative technologies enable customers to recover up to 95% of water, reduce waste, and produce consistently high-quality, saleable materials. Designed for flexibility and built for durability, TWS solutions support everything from standalone installations to fully integrated, large-scale processing plants. Backed by the strength of Terex Corporation and supported by a world-class dealer network, TWS empower customers to achieve smarter growth, improved resource management, and long-term environmental responsibility. The company is committed to helping operations worldwide transform materials, optimize performance, and redefine what is possible in wet processing.

32 Farlough Road, Dungannon, Co. Tyrone BT71 4DT; (028) 8771 8500; www.terexwashing.com

Terracon

L1

Terracon are a modern machinery manufacturer focused on delivering intelligent, efficient blending solutions for material processing applications. Terracon combine innovative design with advanced control technology to create machines that prioritise accuracy, consistency and productivity. Their flagship MV224 blending plant exemplifies this approach, using smart systems and automation to deliver precise material blends while reducing waste and improving operational efficiency. Designed for mobile, real-world use, Terracon equipment brings high-spec blending capability to sites that demand flexibility, speed and control – without unnecessary complexity. Terracon are an emerging force in material processing, using innovation and efficiency to challenge convention and deliver smarter blending solutions for the modern industry.

TEXA UK Ltd

PD21

TEXA UK Ltd are showcasing their advanced diagnostic solutions for construction, off highway machinery and forklift fleets. Alongside the company's rugged hardware, TEXA UK will be demonstrating the power of IDC6 – TEXA's intuitive diagnostic software designed to deliver fast, precise fault detection and a seamless user experience. IDC6 offers extensive multi brand coverage, automatic vehicle/system recognition, guided fault finding, parameter monitoring, actuator tests, DPF and service resets, wiring diagrams and technical data in just a few clicks. From heavy earthmoving equipment to telehandlers and forklifts, IDC6 supports a wide range of manufacturers, helping technicians reduce downtime, streamline maintenance and boost overall fleet efficiency.

The British Aggregates Association
PC15
The British Aggregates Association (BAA) represents the UK's independent quarrying and aggregates sector. As the voice of SMEs in the industry, the BAA works closely with government, regulators and key stakeholders on issues that matter most to operators, including planning, health and safety, transport, environmental policy, and the future sustainability of mineral supply. Hillhead 2026 will mark the launch of the BAA's new 5Cs Health & Safety Strategy, a renewed industry commitment focused on driving meaningful improvements in health and safety performance across the sector. The strategy has been developed to help reinvigorate progress towards the shared ambition of becoming a minimum-harm industry, encouraging collaboration, communication, and continuous improvement throughout quarrying and associated operations. Visitors will have the opportunity to learn more about the Association's policy work, member support services, Assessment of Operating Standards (AOS) Scheme, and how the BAA continues to provide a strong and credible voice for independent operators across the UK. Also highlighted will be the BAA's growing member engagement, technical committees, industry events, and networking opportunities, including the BAA Annual Conference and AGM.
PO BOX 99, Lanark ML11 8WA; (01625) 447770; www.british-aggregates.co.uk

The Conveyor Shop
H20
The Conveyor Shop will be showcasing the latest innovations from across the conveyor industry, bringing together cutting-edge conveyor technology, advanced maintenance solutions and expert services all in one place. Visitors can explore the company's full range, including high-performance vulcanizing systems and the trusted Vulca Fix range, designed to maximize efficiency, reliability and uptime. Whether looking to upgrade existing systems or discover new solutions, The Conveyor Shop team will be on hand to demonstrate products, share insights, and help customers find the right approach for specific operations.
152 Barkby Road, Leicester LE3 5EL; (0116) 231 2183; sales@theconveyorshop.co.uk; www.theconveyorshop.co.uk

The Critical Industry Society Ltd (The CIS)
PD40
The Critical Industry Society (CIS) is a member driven organization bringing together individuals from sectors essential to the functioning of society and the economy. Formerly the Coal Industry Society, the name now reflects the body's broader membership across energy, logistics and raw materials. Founded in 1929, the CIS has continually adapted to the evolving needs of the UK's critical industries. Originally a meeting place for suppliers to the British coal industry, the CIS acknowledges coal's historic role while focusing on new technologies that support future energy and critical mineral security. The CIS hosts two business lunches each year and an annual conference. This year's conference will be held at the Milner York Hotel, featuring industry speakers, panel discussions, entertainment and networking opportunities. Today, the CIS is a vibrant, inclusive group welcoming members from across the wider energy and related sectors. Membership is free and awarded to individuals rather than organizations.

The Motor Control Warehouse
RB17
Founded in 2006 by three variable-speed drive engineers who had been working in the drive industry for a combined total of more than 80 years, The Motor Control Warehouse specialize in motor speed control, concentrating on online sales worldwide. The company supplies AC inverter drives, AC motors, gearboxes, soft starters, open chassis and enclosed star delta starters, DOL starters, enclosed inverters, and much more. All products are supplied at competitive prices and with full technical support, while a team of highly skilled motor speed control experts are available to help with all aspects of product selection and implementation.
Unit 43 Mochdre Industrial Estate, Newtown, Powys SY16 4LE; (01686) 688948; enquiries@motorcontrolwarehouse.co.uk; www.motorcontrolwarehouse.co.uk

The QMJ Group Ltd
H1
The QMJ Group are the leading exhibition organizers and publishers for the aggregate products and concrete industries. Hillhead is the largest exhibition of its kind for the quarrying, construction and recycling industries. It is held biennally in June, in Buxton, Derbyshire, and the last show (2024) attracted 19,560 unique attendees. Agg-Net.com is the QMJ Group's online service and first port of call for the aggregates and recycling sectors. It is supported by twice weekly email newsletters covering both UK and international news. *Quarry Management* magazine has been the official monthly journal of The Institute of Quarrying since 1918. Each issue contains timely, relevant and topical coverage of all key issues, developments and advances in the aggregates sector. The UK Concrete Show is the only dedicated show for the UK concrete sector. It is held annually in March at the NEC, Birmingham. Concrete Connect is the 'go-to' website for key decision-makers within the concrete sector and showcases the latest news from the concrete world. General commentary, market reports and industry features provide an independent and informed voice for the concrete market.
7 Regent Street, Nottingham NG1 5BS; (0115) 945 4367; www.qmj.co.uk

The Timken Company
Q12
Timken are showcasing engineered bearing and power transmission solutions that keep quarrying and heavy processing equipment moving under the toughest conditions.
The company's portfolio includes high-performance tapered, spherical and cylindrical roller bearings, mounted units, industrial seals and lubrication solutions. Together, these increase uptime, extend service intervals and reduce total operating cost across crushers, screens, conveyors, gearboxes and mobile plant. Timken combine advanced materials, precision manufacturing and application expertise to deliver measurable results, with customers reporting longer bearing life, improved reliability and simplified maintenance planning in high-load, high-vibration applications. Beyond products, Timken customers gain access to global engineering support and deep industry knowledge. The firm works with its customers to optimize equipment performance, enhance energy efficiency and strengthen operational resilience. Visit Timken's stand to see how they can help maximize productivity and minimize downtime.
2 Rue Timken, Colmar, 68002, France; +33 38921 4444; communications@timken.com; www.timken.com

The UK Concrete Show
RC16
The UK Concrete Show is the only UK exhibition dedicated to the concrete sector. Held annually in March at the NEC in Birmingham, the show features a packed programme of free-to-attend seminars, a live-demonstration zone, New Product Hub and The Concrete Society Awards Gallery. More than 200 brands will be on display, with many of the world's leading product and equipment manufacturers, suppliers and service providers taking part. The next show takes place from 17–18 March 2027. Visitor registration is free at concreteshow.co.uk.
7 Regent Street, Nottingham NG1 5BS; (0115) 941 1315; info@concreteshow.co.uk; www.concreteshow.co.uk

Thomas Group
M21
Thomas Plant Hire, part of the Thomas Group, deliver comprehensive plant hire and equipment solutions to the construction and quarrying sectors. At Hillhead, the business will be showcasing a wide range of machinery for hire alongside a growing portfolio from Thomas Attachments, including crusher buckets, breakers, pulverizers, munchers and selector grabs, available for both hire and sale.
Tai Hirion, Llwybr Hir, Caerwys CH7 5BL; (01352) 721216; info@thomasplanthireltd.com; www.thomasplanthireltd.co.uk

Thor Atkinson Steel Fabrications Ltd
W13
Thor Atkinson Steel Fabrications help quarry operators and associated industries overcome the challenges of heavy-duty production environments, where worn-out bins, failing conveyors, and poorly integrated systems can slow throughput and increase risk. With decades of experience supporting major UK concrete, asphalt, and aggregate producers, the company delivers practical, hard-wearing solutions to keep materials moving efficiently and sites operating safely. From bottlenecks in materials handling to structural fatigue and compliance concerns, Thor Atkinson design, fabricate, and install robust bespoke steelwork (aggregate bins, hoppers, conveyor systems, chutes, stock bays, access platforms, safety guarding etc). The company's services include plant inspections, maintenance and repairs, structural upgrades, crusher and screening equipment installation, and preventative maintenance programmes – all focused on minimizing unplanned stoppages and maintaining compliance. And when redundant or unsafe plant becomes a liability, the company's specialist demolition division, N&R Contractors, can handle safe dismantling and removal, with options to recover and reinstall usable equipment.
Fabrication House, Newland, Ulverston, Cumbria LA12 7SH; (01229) 861859; marketing@thoratkinson.co.uk; www.thoratkinsonltd.co.uk

Thwaites Ltd
N1
Thwaites site dumpers are built to last and to be the best. Designed and manufactured in the UK with contractors and hirers in mind, each machine is safe, compliant and competitive. Hillhead attendees can see the new electric 2-tonne and 3-tonne machines, the innovative ROPS+ range, and the headline ROTATOR machine, in addition to the hirers and contractors' favourite 1-tonne to 9-tonne site dumpers. The Thwaites sales team will be joined on the stand by representatives from the business's network of UK distributors, all keen to welcome new visitors and meet old friends.
Welsh Road Works, Cubbington, Leamington Spa CV32 7NQ; (01926) 422471; uksales@thwaitesdumpers.co.uk; www.thwaitesdumpers.co.uk

Titus Attachments
B10
Established in 2016, Titus Attachments are an Irish-based company specializing in the design and manufacture of market-leading excavator attachments. The company's high-quality attachments have become the preferred choice for those seeking unmatched safety, performance, and reliability. Each excavator attachment is meticulously designed and tested to ensure it can withstand the most demanding conditions. Titus attachments are exported globally, reaching customers directly and through a network of trusted partners.

Topcon Positioning's MC-Mobile 3-in-1 solution for excavators

TMS Group Europe
PB1

TMS Group Europe are a leader in providing complete solutions for optimizing production processes in aggregates, ready-mix batching plants and recycling. The company helps customers reduce production costs and cut CO_2 emissions to the lowest possible level. The TMS Platform is built on the Industry 4.0 concept. The business's mission is to enable customers to achieve efficient, sustainable and safe production with minimal fuel and electricity usage, carbon footprint, machine wear, and manpower. The TMS Industry 4.0 Platform supports best practices in the areas of operational excellence, continuous Improvement, proactive safety, preventive maintenance, energy management (fuel and electricity), and sustainability. It collects and analyzes real-time machine and equipment data – independent of manufacturer – and delivers actionable, proactive, and predictive reporting.

TPS WeldTech
RB4

TPS WeldTech deliver welding, cutting and automation solutions that support uptime, quality and safer working for industrial teams across the UK. The company is an independent supplier of high-tech welding and cutting equipment from world-leading brands, combining deep product expertise with practical back-up – from specification through to ongoing support. TPS WeldTech also supply a comprehensive range of leading-brand welding consumables and accessories, ensuring customers have everything required for consistent, high-quality results. For businesses operating in demanding environments – including quarrying, construction plant maintenance, materials processing and recycling operations, TPS WeldTech provide equipment sales and hire, plus dependable service, repair and validation to keep critical kit working as intended. The firm also supports compliance and helps customers modernize processes with welding and production automation solutions. TPS WeldTech are ISO 9001 approved and focused on recommending the right solution for each application – whether improving weld consistency, reducing rework, or accelerating turnaround on repairs.

Tsurumi UK Ltd

RD19

Japanese pump manufacturer Tsurumi will be highlighting their range of one-phase and three-phase heavy-duty pumps, designed to withstand the harshest environments including quarries, mines, construction sites, tunnelling and large infrastructure projects. Offering pumps up to 110kW within their range, Tsurumi combine sustainable manufacturing with superior build quality, providing longer-lasting pumps, reduced whole-life costs, fewer parts, and extended service and maintenance intervals. As part of the brand's environmental commitment, a tree or kelp will be planted for every Tsurumi pump sold throughout 2026 as part of the Tsurumi Tree & Kelp Project, which has already resulted in over 27,000 plantings since 2024. Tsurumi have also recently announced a new UK distribution partnership with renowned dredging pump manufacturer Dragflow, which will be featured on the stand. Their range includes remote-controlled, cable, amphibious and aquatic harvesting options suited for ports, quarries, mining, and maritime applications.

Tucker EMS Ltd

RD25

Long-established family run business Tucker EMS operate as commercial and industrial electrical specialists offering a wide range of bespoke services for the quarrying and associated industries. These services include electrical safety compliance, maintenance, electrical inspection and testing to BS7671, thermal image surveys, LV installations, and the design, build and installation of control panels. On display will be the company's RFT Cloud defect-management system, which is used to complement and enhance its electrical condition reporting. Engineers capture defects using the in-house designed bespoke app, and customers can then view and manage defects in real time.

TurboActive Ltd

RE3

Turboactive are the UK's largest official aftermarket distributor for the world's leading turbocharger original equipment (OE) manufacturers, supplying only genuine OE product and giving customers complete confidence in quality, performance, and reliability. With the largest OE turbo stockholding in the UK, TurboActive offer unmatched availability across all sectors, including plant, agricultural, commercial vehicle, and industrial applications. Their extensive range ensures fast supply, minimal downtime, and the right solution first time. At Hillhead 2026, visitors will be able to: discover the difference that genuine OE turbochargers can make, explore the company's extensive stock range and fast supply capability, and find reliable solutions to reduce downtime and improve performance. Whether maintaining, repairing, or upgrading, Turboactive deliver OE quality backed by industry-leading availability and expertise.

Tyre-Line Original Equipment Ltd

RB18

For more than 25 years, Tyre-Line have been the official distributor for Alcoa wheels and accessories. Alcoa wheels are the only homologated aluminium wheels approved by OE commercial vehicle manufacturers. Alcoa wheels are up to 47% lighter than traditional steel wheels, allowing increased payload capacity and improved operational efficiency. Working alongside Tyre-Line with 20 years' experience supplying Timken Belts and, more recently, Linmax Belts, CR Products are a trusted partner to the quarry and aggregates industry. The business works closely with dealers, distributors, and OEMs across Europe, the Middle East, Africa, and the UK, providing dependable power transmission solutions, strong product availability, and responsive support to help keep quarry operations running efficiently and reliably.

Tyrefix Group
W22
Tyrefix Group specialize in off-road heavy machinery repair and maintenance for plant, agricultural, and earthmoving equipment. For over 40 years the company has delivered nationwide support with a transparent fixed-price model. With more than 100 technicians across 21 UK locations, Tyrefix provide fast, reliable service, with their dedicated Earthmover division offering tyre-management solutions, including inspection, repair, foam fill, pressing, and retreading. Tyrefix's latest division, Plantfix UK, delivers servicing, preventative maintenance, LOLER and PUWER compliance, emergency breakdown support, and diagnostics. Every visit includes a free machinery health check.
Spring Road, Brookside Industrial Estate, Ibstock, Leics LE67 6LR; (01530) 244444; tyrefix@tyrefixuk.com; www.tyrefixuk.com

Tyrone International Ltd
T3
Tyrone International are a leading provider of game-changing aggregate processing and water-treatment solutions, operating across five regions globally and offering future-proofed systems to extract valuable resources from a variety of materials. At this year's event, Tyrone are launching and showcasing a range of their latest solutions, including: the T-Scalp 125 – their new fully electric static scalper, which is rugged and durable with the ability to handle the toughest of feed material; the TrackWash Pro 120 mobile wash plant with more than five years' R&D invested and several patents granted; and the Tyrone T-Press mobile filter press, the company's new self-contained transportable unit, with a compact design for rapid deployment and leading on-site sludge dewatering.

Ulrich Engineering Ltd
W18
Established in 1998, Ulrich Attachments are a leading UK manufacturer of front-end mobile plant attachments. The company offers a comprehensive portfolio of standard and bespoke options to suit a diverse range of plant machinery, from telehandlers, wheel loaders and excavators to tractors and military machinery. Ulrich's product range includes multiple bucket options, such as general purpose, high tip, and clamp buckets. The business also has a range of forks, couplers, winches jibs and grapples that increase the versatility of plant equipment, as well as offering refurb and maintenance services. Ulrich's production process and manufacturing facility is completely UK based, with all products made from the highest-quality materials.

Unicontrol
Y5
Unicontrol redefine how construction sites operate through intelligent machine control and digital surveying technology that puts precision and data at the centre of every decision. Built for modern, connected job sites, Unicontrol's smart software bridges the gap between planning and execution. Their flexible, machine-compatible systems integrate seamlessly with existing equipment, allowing contractors to move, grade and shape terrain with exceptional accuracy. At the core of Unicontrol is simplicity powered by intelligence. Real-time data, intuitive interfaces and cloud-based connectivity allow teams to work faster, reduce errors and maintain full visibility across projects. From earthmoving to final grading, operators and site managers gain greater control, consistency and confidence.

Unilok Road Equipment
Q4
Unilok Road Equipment have more than 30 years' experience in the production and supply of road maintenance and construction machinery. The company manufactures bitumen emulsion sprayers, bond/tack coat sprayers with bitumen joint sealers, automatic tailboard chip spreaders, combination sprayers, and other road maintenance equipment. On display will be a new, redesigned bond coat sprayer with double-arm bitumen joint sealer mounted on a Volvo FM truck. This unit is also fitted with Unilok's new site multi-service pod containing water and diesel. Also on display will be a compact bond coat sprayer mounted on a 14-tonne chassis. Designed for work in tight city streets across the UK and Ireland, this unit has the turning circle of a standard MWB van but can carry 3,500 litres of emulsion and a full-size bitumen melter for joint sealing. It also retains Unilok's standard 4.2m expandable spraybar.

UTV Products
PD3
UTV Products design and manufacture high-performance LED lighting solutions for the quarrying, construction and off-highway sectors. Engineered with OEM integration, durability and real-world performance in mind, the range is built to meet the demands of

heavy-duty machinery operating in harsh environments. From concept through to validation, each product is developed to deliver consistent light output, thermal efficiency and long-term reliability. The portfolio includes work lights, headlights and specialist lighting solutions, all designed for seamless installation and system compatibility across modern equipment. At Hillhead, UTV Products will be showcasing their latest OEM-style lighting innovations – focused on plug-and-play integration, zero radio interference and robust performance in dust, vibration and extreme weather conditions. Products are developed to meet EMC standards and industry compliance requirements, ensuring reliable operation alongside onboard electronics. Working with OEMs, distributors and fleet operators, UTV Products provide lighting solutions that enhance visibility, improve safety and maintain machine aesthetics, without compromise.

Vac-Ex.com

A39

Vac-Ex are a leading UK manufacturer of compact vacuum excavation equipment. Designed and built in Doncaster, South Yorkshire, their machines help reduce utility strikes, minimize surface disruption, and improve on-site safety and efficiency. Renowned for high-quality construction, intuitive operation, and adaptability, Vac-Ex equipment delivers reliable performance across a wide range of environments, from confined urban sites to remote infrastructure projects. Vac-Ex support customers with a comprehensive one-stop service offering, including equipment hire, training, servicing, and spare parts.
Coulman Road Industrial Estate, Thorne, Doncaster DN8 5JU; (01302) 235099; info@vac-ex.com; www.vac-ex.com

Vaculug Ltd

W20

Vaculug Ltd will be exhibiting alongside Magna Tyres, showcasing their combined expertise in high-performance tyre solutions for the quarrying and construction sectors. As a leading UK retreader and tyre-management specialist, Vaculug bring decades of experience in sustainable tyre life, fleet management, and cost reduction. Partnering with Magna Tyres, a global manufacturer known for robust OTR and industrial tyres, the collaboration will offer visitors a comprehensive look at premium new and retreaded tyre options tailored for demanding environments. Attendees can explore innovative products, discuss bespoke tyre management, and learn how Vaculug's circular approach supports both operational performance and environmental goals.

Volvo Construction Equipment
Y5

Volvo Construction Equipment are one of the most established and respected manufacturers of construction machinery, built on decades of engineering heritage and a reputation for quality spanning generations and markets worldwide. From their origins to their position today as a global authority in construction equipment, Volvo CE have continuously raised standards through engineering excellence and purposeful innovation. That legacy underpins a modern product range designed to deliver performance and reliability across building, construction and large-scale infrastructure projects. Sustainability is a defining force behind Volvo CE's development strategy. Through fuel-efficient machines, alternative power solutions, electrification and advanced technologies, Volvo CE are actively reducing environmental impact while improving productivity and safety on site. This approach ensures innovation delivers real, measurable benefits. Beyond the machines, Volvo CE bring deep application knowledge, intelligent systems and long-term support, helping customers operate more efficiently today while preparing for the demands of tomorrow.
Moorfield Road, Duxford, Cambridge CB22 4QX; (0330) 175 5586; www.smt.network/gb

Volvo Financial Services
Y5

Volvo Financial Services (VFS) provide flexible finance and insurance solutions designed to support the purchase and operation of construction and industrial equipment. Working in close partnership with customers and Volvo Group brands, VFS offer tailored funding options that align with business needs – helping manage cash flow, control costs and support long-term growth. From hire purchase and leasing to insurance and service solutions, VFS simplifies investment decisions and reduces financial complexity. Volvo Financial Services gives customers the financial confidence to invest, grow, and maximize the value of their equipment – today and into the future.
Moorfield Road, Duxford, Cambridge CB22 4QX; (0330) 175 5586; www.smt.network/gb

Volvo Penta
Y5

Volvo Penta and their authorized dealer SMT GB bring a focused showcase of industrial power solutions designed for the demands of the quarrying, construction and off-grid sectors. On display will be a remanufactured D5 engine – a factory-certified solution built using genuine Volvo Penta parts – that delivers the same performance and reliability as a new engine, but with up to 50% cost savings and full warranty coverage. Also on show will be the Volvo Penta D8 dual-fuel engine, offering operators a practical route to reduced emissions and lower running costs without compromising on power. Volvo Penta's modular and scalable battery systems for flexible, reliable energy storage – mobile, grid-independent power solutions purpose-built for construction sites and off-grid applications – will also be on display. Cutting reliance on diesel generators, reducing fuel costs and emissions, and built on proven Volvo Group battery technology, these systems are integration-ready for system integrators and equipment manufacturers.

Whisper Services Ltd

PA14

Founded in the U, Whisper Services is a newly established branch of a family holding with a strong foundation rooted in more than 20 years' experience in the manufacturing and supply of a comprehensive range of high-performance wear-resistant parts for mining equipment. Products are built from premium materials such as high manganese steel and a variety of alloy steels, ensuring maximum durability, strength, and resistance to wear. From crushers to mills, each product is designed to meet the most demanding operational requirements of the mining and recycling industries, reducing maintenance time, lowering operational costs, and ensuring consistent production output.

Wirtgen Ltd

Q1

A production system for road construction with zero operating emissions and featuring three market-premières will be among the highlights of the Wirtgen Group's appearance at the show – the Wirtgen W 50 Re cold milling machine, Vögele Super 1300-5e road paver and the Hamm HX 70e tandem roller, all based on a battery-electric drive concept. Under the motto 'You'll never crush alone', Wirtgen Group have also set the focus on end-to-end solutions for materials processing with five crushing and screening plants from Kleemann – the Mobicat MC 110 EVO2 jaw crusher, which combines a smart operating concept with high efficiency; the compact Mobirex MR 100 NEOe impact crusher with its all-electric E-Drive concept; the Mobiscreen MSS 502 EVO and MSS 802 EVO scalpers; and the Mobiscreen MSC 702 EVO classifying screen. Also on display will be the new Multi Jet burner from Benninghoven – the world's first asphalt plant burner that can be fired exclusively with green hydrogen. Rental machines will round off the exhibits with two rollers from Hamm – the new 2.5-tonne HD 12 G VV tandem roller and the extremely versatile HC 70i VIO compactor. Jobsite intelligence and smart automation will also feature on the stand with the Wirtgen Group Performance Tracker and digital solutions such as Smart Level Pro, Smart Pave, Smart Compact Pro, AutoPilot 2.0, Spective Connect etc.

Wirtgen Group House, Overfield Park, Godfrey Drive, Newark NG24 2UA; (03452) 412770; sales.gb@wirtgen-group.com; www.wirtgen-group.com/gb

Exhibitors A-Z

Yanmar L Series engines will be shown by UK distributor Barras

Worsley Plant
W1
Worsley Plant are a leading UK supplier of hydraulic attachments for the quarrying, construction, demolition and recycling industries. With decades of experience, the company is known for delivering practical, high-performance solutions that improve efficiency, safety and productivity on site. As the exclusive UK distributor for several world-class manufacturers, Worsley Plant offer a comprehensive range of attachments, including crusher buckets, screening buckets, demolition shears, grabs, magnets and specialist material-handling equipment. Worsley Plant support their customers through sales and hire options, backed by expert technical advice, live demonstrations and reliable after-sales support. The business works closely with contractors and operators to understand real site challenges and supply equipment that delivers measurable results, from reducing material-handling costs to maximizing the value of recycled material. With a strong focus on innovation and customer service, Worsley Plant continue to support the evolving demands of the UK aggregates and recycling sectors.
Road Beta, Brooks Lane Industrial Estate, Middlewich, Cheshire CW10 0QF; (01606) 835544; info@worsleyplant.co.uk; www.worsleyplant.co.uk

Wright Engineering
H10
Wright Engineering are UK-based engineering specialists delivering high-quality solutions across bulk materials handling, plant installations, and bespoke fabrications. Serving the quarrying, mining, recycling, and heavy industrial sectors, the company is known for its practical approach and commitment to reliability in demanding environments. From the design and manufacture of robust conveying systems and handling equipment to full plant installation projects and shutdown support, Wright Engineering provide end-to-end capabilities tailored to customer requirements. Their bespoke fabrication services further allow clients to solve complex operational challenges with precision-engineered solutions. Combining technical expertise with hands-on industry experience, Wright Engineering partner with customers to deliver efficient, durable, and cost-effective outcomes.
Carlton Forest, Red Lane, Worksop S81 8BP; (01909) 730507; sales@wrighteng.co.uk; www.wrighteng.co.uk

XCMG
T1
XCMG UK will be exhibiting their latest construction equipment for quarrying, recycling, and heavy-duty applications. Hillhead visitors can explore a range of machines designed for performance, reliability, and efficiency, and speak with the team about solutions tailored to demanding site environments.
Unit 1 Elia Close, Chapel Lane, High Wycombe HP12 4FX; (01494) 413340; marketing@xcmguk.com; www.xcmguk.com

Xylem Water Solutions UK Ltd
RA7
Xylem are a global water technology company delivering reliable pumping and water-management solutions for quarrying, construction, and recycling applications. At Hillhead, Xylem will present proven dewatering and water-treatment technologies available for both purchase and rental, supporting short-term site needs and long-term infrastructure projects. With a strong UK presence and deep application expertise, Xylem provide robust electric and diesel-driven pumps, smart control systems, and rental-ready packages designed for rapid deployment and dependable performance in the toughest site conditions. Backed by responsive local support, Xylem help customers reduce downtime, improve efficiency, and meet environmental and regulatory requirements.
Private Road No1, Colwick, Nottingham NG4 2AN; (0845) 707 8012; www.xylem.com/en-uk/markets/construction/

Yanmar
C39
The 4TN107 high-power industrial diesel engine represents the pinnacle of Yanmar's commitment to high-performance diesel technology. Now delivering up to 155kW, the engine combines exceptional robustness with high power density and market-leading fuel economy – delivering the reliability and efficiency required for the modern off-highway sector. As the trusted UK distributor of Yanmar industrial diesel engines, Barrus deliver flexible, specialist applications engineering support tailored to customers' needs, seamlessly handling everything from bespoke one-off projects to full-volume production.
Barrus, Glen Way, Launton Road, Bicester, Oxfordshire OX26 4UR; (01869) 363636; www.barrus.co.uk

Yanmar Compact Equipment EMEA
A38
Yanmar Compact Equipment EMEA are a global leader in the design, manufacture and distribution of state-of-the-art worksite machinery. Employing more than 500 members of staff, the company's equipment is well suited to a wide range of applications, including infrastructure, drainage, landscaping, demolition and civil engineering, with a portfolio that includes conventional and zero tail-swing mini- and midi-excavators, dumpers, compact wheel loaders and attachments.
25 rue de la Tambourine, Saint-Dizier, 52100, France; 0325 563975; ycee-contact@yanmar.com; www.yanmar.com/eu/construction/

Yilkar Foundry & OSS Machining
PC31
Founded in 1986 as a cast iron workshop, Yilkar Foundry expanded their production capabilities in 1996 by starting steel and ductile iron production. The company began exporting to Europe in 2006 and completed its machining investment in 2014, subsequently supplying finished products to customers. Through design and casting simulation expertise, the company strives to ensure customer satisfaction from the very first step of production. In addition to producing high-quality products, it also provides external painting and surface protection services upon customer request.
Buyukkayacik (OSB) Mh., 6.Sk. No:4, Selcuklu/Konya 42160, Turkey; +90 332 239 0447; info@yilkardokum.com.tr; www.yilkardokum.com.tr

Yilmaz Reduktor
PA45
Yilmaz UK will be showcasing a range of industrial geared motors and gearbox solutions designed for demanding quarrying, recycling, aggregates and bulk materials handling applications. Featured products include the K-Series helical bevel gearboxes, D-Series parallel-shaft helical gearboxes, M-Series foot-mounted helical gearboxes, and H-Series heavy-duty industrial gear units. Supported by UK assembly, stock and technical support, Yilmaz UK provide fast configuration and reduced lead times for new installations, upgrades and replacement projects. Visitors can discuss gearbox selection, ratio calculations, mounting configurations and drive solutions with the technical team. The company will also highlight its UK assembly capability, allowing geared motors to be configured quickly with the correct motor, ratio and mounting arrangement before dispatch. Yilmaz UK's focus is on practical engineering support, reliable

power transmission and helping operators minimize downtime across heavy industrial applications.
Unit 4 Flagship Court, Flagship Square, Shaw Cross Business Park, Dewsbury WF12 7TH; (01924) 284320; www.yilmaz.co.uk/

Yokohama / Goodyear Off-The-Road

V4

Yokohama OTR is a division of The Yokohama Rubber Company. With over 50 years of experience, their products are known for their durability, reliability and performance. Goodyear Off-the-Road (GY-OTR) is a business unit of the OHT Division of Yokohama Rubber Co. This unit is responsible for the design, development, manufacturing, marketing and sales of specialized OTR tyres worldwide under the Goodyear OTR brand. This brand offers a wide range of tyres for construction, quarrying, ports, material handling, surface mining and underground mining applications, and specializes in giant radials used in mining applications. The business unit also offers services to help keep the tyres running at the designed conditions to derive optimum value for customers. Designed by world-class engineers at the company's R&D facilities and manufactured in state-of-the-art plants, all products undergo stringent checks to ensure that the best quality is delivered to customers, every time.
25, Z.A.C. Klengbousbierg, Bissen, 7795, Luxembourg; +918 956303510; www.yokohamaotr.com

Zappshelter

U13

Made in Britain, Zappshelter is the toughest shelter system available, engineered to last like conventional buildings while being quick to install and relocate. Typically mounted to shipping containers or interlocking block walls, the Zappshelter system is designed to create material storage bays or undercover workshop areas, to keep sites moving with no delays.
Inchcoonans, Perthshire PH2 7RB; (0208) 0505121; hello@zapp.group; www.zappshelter.com

Zenith Rubber UK Ltd

RD5

Zenith Industrial Rubber Products have been a leading manufacturer of high-quality industrial rubber products since 1965. With a strong focus on delivering excellence, Zenith offers a diverse range of products including high wear-resistant rubber products such as lining sheets, conveyor belts, screening rubber, skirtboard rubber, rubber pulley lagging, ceramic pulley lagging, ceramic wear pads, impact bars, glide bars, lifter bars, conveyor repair patches and strips, steel-backed rubber pads, sidewalls, flights, gaskets and seals. Zenith Rubber UK/Ireland warehouse spans over 65,000ft², with raw material stock inventory of over 3,800 tonnes. At the core of the company's current operations is a massive investment in precision cutting technology, with state-of-the-art CNC and water-jet cutting facilities offering rapid delivery of bespoke cut rubber parts in a choice of more than 200 performance polymers to meet the most demanding applications.
Unit 32 Purdeys Way, Rochford, Essex SS4 1ND; (01702) 943006; sales@zenithrubber.co.uk; www.zenithrubber.co.uk

Zoomlion UK Ltd

CE7

Zoomlion will showcase a range of machinery designed to support the quarrying, construction and industrial sectors. Known globally for their engineering expertise and innovative equipment solutions, Zoomlion continue to deliver reliable and efficient machines for demanding jobsite applications. Visitors to the Zoomlion stand will have the opportunity to explore equipment designed to enhance productivity, safety and operational efficiency. Developed with the needs of modern worksites in mind, Zoomlion machinery is built to perform in challenging environments across a variety of industries. With a strong focus on performance, durability and operator comfort, Zoomlion equipment is engineered to support customers in achieving greater efficiency and reliability on site. The team will be available throughout the event to discuss solutions and provide further information about Zoomlion's latest technologies and capabilities.

Late entries

Crescent Industrial

RC2

Crescent Industrial are a family-run supplier of industrial floor-cleaning equipment, providing machines for hire and purchase across a wide range of sectors, including food processing, manufacturing, facilities management, construction, distribution and contract cleaning.
30 Berrington Road, Leamington Spa, Warks CV31 1NB; (01789) 415695; www.crescentindustrial.co.uk

EAO Ltd

PA27

EAO are a Swiss family-owned company specializing in human-machine interface (HMI) solutions for heavy-duty, off-highway and industrial applications. At Hillhead 2026, the company will highlight its Series 09 CANbus keypads and rotary cursor controllers, designed for construction, agricultural and specialist vehicles operating in demanding environments. The range includes 2-, 6- and 8-way CANbus keypads, alongside rotary controllers combining joystick and encoder functionality for precise machinery control. IP69K-sealed variants and CANopen Safety with PLd capability support reliable performance in safety-critical applications. EAO will also showcase their modular Series 46 range of pushbuttons, selector switches and emergency stop switches, offering flexible, durable and cost-effective HMI solutions for industrial equipment and vehicle applications. Available in 22mm and 30mm formats, the Series 46 is easy to configure and offers sealing up to IP69K on some actuator styles.

NRS Group

Operations Manager - Earthmoving Team and, Experienced Quarry Manager

NRS is a leading family owned quarrying company and a major supplier of aggregates, transport, recycling and waste management services.

To support the expansion of our growing business, we have new opportunities for an **Operations Manager** for our Earthmoving Team and an **Experienced Quarry Manager**.

The successful candidates should have demonstratable previous practical experience in all aspects of quarrying operations from extraction to restoration.

The roles will suit self-motivated individuals with the ability to manage and develop staff while demonstrating an understanding of appropriate legislation.

You will be customer focused, ensuring service and quality standards are achieved and maintained.

The ideal candidates will have:
- Excellent awareness of current Health, Safety and Environmental Legislation.
- Completed or working towards a SHE NVQ Level 4 or equivalent.
- At least 5 years relevant experience.
- A good understanding of plant and machinery, including maintenance planning.
- Comprehensive understanding of Quarries Regulations.

These are excellent opportunities to fulfil important roles within a growing and successful business.

Closing date: Tuesday 30th June

To apply please send a covering letter and CV to:
ian.p@nrswastecare.com

BATHGATE
SILICA SAND

Quarry Manager – Take the Lead at Bathgate Silica Sand

Bathgate Silica Sand is a leading UK supplier of high-quality silica sand and related products, supplying diverse sectors nationwide. As we continue to grow, we are looking for an experienced Quarry Manager to take ownership of our Cheshire operation and drive safe, efficient and compliant performance.

This is a senior leadership role with real influence, offering the opportunity to shape site performance and contribute at a senior level. You will lead all operations, managing a team of 25+ through four direct reports across Engineering, Operations, Health & Safety and Projects.

You will be accountable for delivering operational excellence, driving productivity, managing cost and performance and leading a significant capital investment programme. You will also ensure strong environmental standards, regulatory compliance and positive stakeholder engagement.

We are looking for a hands-on, visible leader with experience in quarrying, strong commercial awareness and a proven commitment to health and safety. Relevant QSHE qualifications are essential.

For an informal chat, contact Paul Griffiths at paulgriffiths@corkgriffiths.co.uk today quoting 'Reference BG101'
