

REMOTE COURT PRIVACY PODS

www.cubical booth.com/courts

Accessible. Transparent. Private. Efficient.

CUBICALL FOR COURTS

Cubicall's privacy pods increase courtroom efficiency through convenient & inclusive access to the courts.

Remote Court Privacy Pods with built-in video conferencing designed for courts and document reader technology offer easy access, provide effective communication and streamline legal processes for all parties involved.

Private Meeting Pods help maintain attorney-client privilege by keeping conversations private— whether it may be in a courtroom or public access point.

And no need for costly, permanent build outs. Cubicall's prefabricated systems ship flat, easily assemble and can be customized to suit requirements of any court.

REMOTE COURT & PRIVACY PODS

facilitate court access,
boost productivity

Provide convenient access to court hearings without backlogging physical court rooms. Furnish access in lobbies, hallways— or even non-judicial buildings.

Allow judges and attorneys greater schedule flexibility.

keep space flexible and
flex your budget

Don't limit your space with permanent build outs that may not meet court needs in the future.

Manage budgets and adapt to changing technology with Cubicall's modular designs that move with the changes.

HD DOCUMENT CAMERA WITH WEB INTERFACE

The pursuit of justice relies heavily on effective communication and presentation of evidence. In a virtual setting, document cameras play a crucial role in empowering individuals and safeguarding their rights by promoting transparency, inclusivity, and a fair administration of justice.

Cubical's in-ceiling document reader enables remote participants to view documents and evidence with the same level of clarity as if they were physically present. Sessions can also be easily recorded to memorialize legible records for future reference.

The camera helps increase courtroom efficiency – making the legal process in virtual hearings more transparent, streamlined, and accessible for all parties involved.

The Vaddio DocCAM from Legrand® features:

- Exmor® 1/2.8 type, high-speed, low-noise image sensor for 2.38 megapixels total, full HD (native 1080p/60)
- 20x optical zoom with horizontal field of view from 60° (wide end) to 3.3° (tele end)
- Web interface for remote administration and operation, integration-ready Telnet and serial RS-232 control

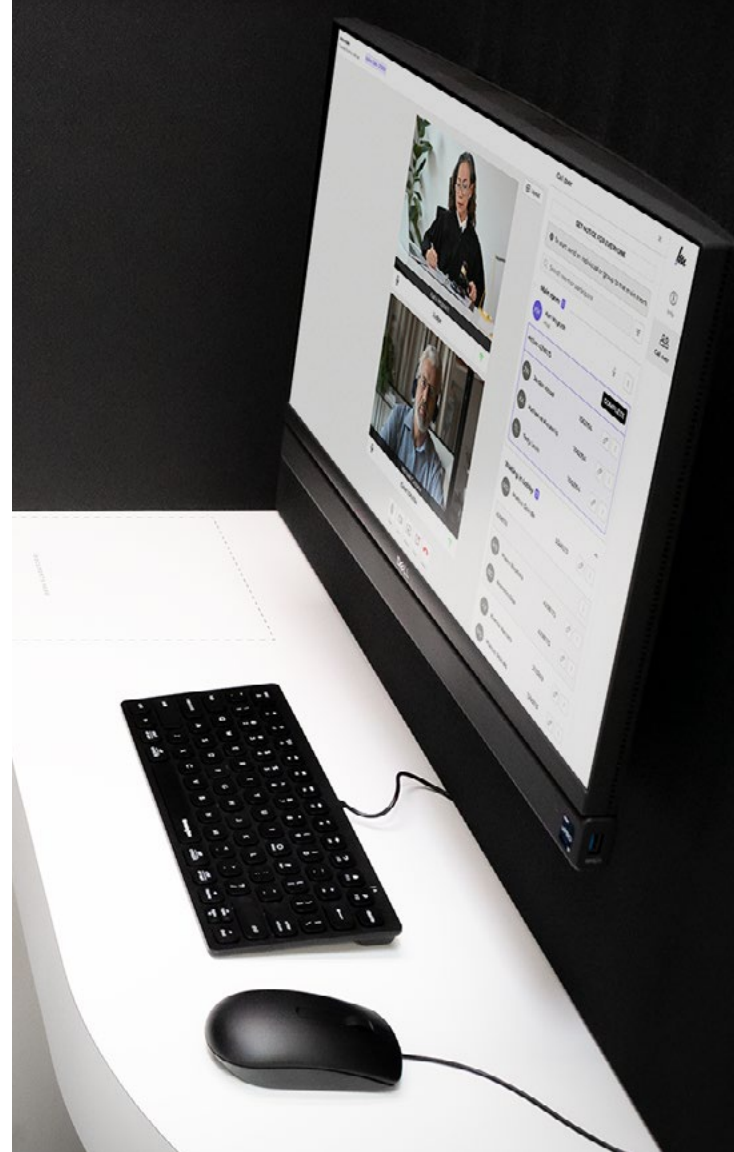

Immediation.

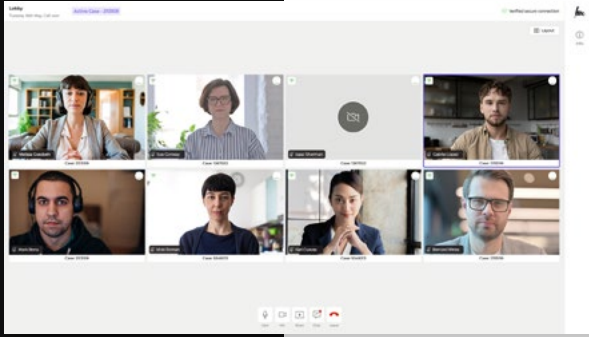

PURPOSEFUL SOFTWARE designed for courts

Cubicall Court Pods with Immediation offer an integrated and intuitive platform for virtual court needs. Designed by lawyers & judges, Immediation is equipped with more than 40 configurable features that adapt to your needs—providing a single streamlined user interface for all parties: the bench, court administrators, attorneys, and the public.

Drive efficiency by digitizing your analog processes, or current processes that are spread across multiple apps. The configurable software is white-labeled to match your official branding and requirements.

CALL OVER

A virtual conferencing solution that gives judges more flexibility by allowing them to easily schedule and call parties into virtual rooms. With authentication through party name and case-numbers, this role-based access system eliminates security and confidentiality concerns to efficiently move through dockets.

VIRTUAL HEARING ROOM

Perfectly replicate courtroom interaction and processes on one screen. Designed by court personnel with privilege & confidentiality at the forefront, role-based access ensures parties see & hear only what they are meant to. Immediation delivers the highest quality, most secure platform to hear cases—speeding disposition rate and increasing overall access to the court.

Features include:

- Neutral party or designated operator controls
- Party & Counsel rooms for discussion with privilege
- Chat & whiteboards
- DocuSign integration for smooth and swift execution of court orders

BIFOLD DIFFERENCE

MAXIMIZING SPACE UTILIZATION

Cubicall's patented design utilizes a bifold door, efficiently maximizing space where it matters.

Swinging doors necessitate larger areas for clearance, increasing the booth's overall footprint.

When meeting the requirements of International Building Codes, the bifold door reduces the minimum encroachment requirement by more than 50%.
