

MONARCH[®]

Product Catalogue

Why MONARCH[®]

It all started with one paint brush. A handcrafted beauty. A soft, silky filament with a raw timber handle. Secure in the hand and smooth to use.

Whether you're a professional trade painter, a seasoned project extraordinaire or an aspiring DIYer, our premium Monarch brand has the right tools to help with your next painting job or project.

And although we have continued to be the paint brush range of choice for professional painters for over 25 years, **we've only just started.**

JOIN US ON THE JOURNEY

With Monarch's focus on increased distribution we will continue to revolutionise paint accessories with new product innovations and sustainable and conscious product offers both now and into the future.

What sets us apart?

The Australian Brushware Corporation is committed to minimising long term environmental impact, retaining world class product innovation and its Australian heritage.

Training

We know our success lies in the knowledge of the people selling our product. Which is why we invest in training facilities and courses for our retail partners' employees to educate and invite an intimate understanding of our products. We operate five, full time training facilities offering hands-on learning and development plus remote options to extend our reach. Every year, we train over 4,500 of our retail partners' employees.

Innovation

Out of the box thinking is what has made our business what it is today. We have long believed that remarkable growth comes from being brave enough to try something new and it is our Innovation Centre that drives clever design ideas for new products and ways to evolve the market. Our Innovation Centre conceptualises and evolves product ideas through to commercialisation. With a keen interest in leading prototyping and testing equipment, we invest in a robotic painting cell with an industrial painting arm to help test the performance of new, and existing paint applicators.

Personalised Support

Our multi-site warehouse locations provide efficient delivery throughout Australasia and our local customer service and sales team help deliver personalised and timely support to our customers and retailers.

Sustainability

Whether it's our reusable and recyclable packaging solutions, our sustainable paint accessory products or our carbon neutral sustainability partnerships, The Australian Brushware Corporation is committed to minimising our global footprint across all facets of business operations.

Paint Brush DNA

Handle ①

The brush handle is designed for comfort and control across any surface or space.

Raw timber handles for durability, naturally absorbing moisture for a consistent grip during long painting sessions.

A comfortable grip also **helps reduce hand fatigue** and cramping during extended use.

Ferrule ②

The ferrule connects the brush head to the handle.

Stainless steel ferrule and pins prevent rust and increase durability.

Epoxy resin securely bonds the filament to the ferrule and minimises filament loss. Timber wedges support the filament and help maintain the brush's shape.

Filament ③

The filament refers to the bristles, the part of the brush that does the work.

Synthetic filament is ideal for water-based paints, aqua enamels, and oil-based paints.

Pure bristle filament is a natural fibre suited to oil-based paints and enamels.

Blended filament combines the strengths of natural bristle and synthetic fibre for specialised applications.

Handcrafted

**Great then.
Great now.**

monarchtradepainting.com

Monarch Advance

Monarch Advance brushes have been trusted by professional painters for decades. Each brush is handcrafted with premium materials to deliver a smooth, professional finish every time.

- Raw timber handle
- Stainless steel ferrule
- Premium synthetic tapered filament

Monarch Advance Paint Brush

Designed to carry the most paint, great for cutting in large areas like walls and ceilings.

Handle	Beavertail
Ferrule	Square
Filament	Premium Synthetic Tapered

Size	Barcode	Ctn Qty	Code
25mm	9 320090 499890	6	AB-9610

Roller Cover DNA

Nap ①

Nap refers to the length of the fabric, which determines how much paint the roller holds and releases.

Different nap lengths suit different applications and paint types.

Nap length and fabric influence paint coverage and texture.

Match the nap to the job for the best results.

Core ②

The core is the foundation of the roller, designed to be hardwearing and durable for any job.

Provides a **strong hold** on the roller cage, maintaining its shape through heavy use.

A **plastic core** is ideal for water-based and oil-based paints.

A **phenolic core** is best suited for solvents and epoxy paints.

Length ③

Roller length refers to the length of the roller itself and should match the scale of your project.

A wide range of sizes are available, from **75mm to 460mm**.

Longer rollers cover large surfaces quickly, while shorter rollers offer greater control.

Most roller lengths are available across the full fabric range.
