## Trapeze Support System

How to install the STUDBITE Trapeze Support System

1

Pull back the plate on each of the STUDBITE Trapeze Support Adaptors (SB-TSA) and slide them up along each of the Threaded Rods so they face inwards towards each other.

2

Place the Trapeze Support so it lays flat on top of the two STUDBITE Trapeze Support Adaptors, with one STUDBITE Trapeze Support Adaptor at each end.

3

Once in place, make any necessary adjustments to the STUDBITE Channel to Stud Trapeze Support Adaptors to make the Trapeze Support level by once again pulling back the base plate to loosen the tension enough to allow repositioning. Tighten the bolts on the end of each of the STUDBITE Adaptors.

4

Insert a STUDBITE Screw to the outer most hole on the top surface of each end of the Trapeze Support to secure the system.

## BLITZCLIP Seismic Wire Kit

- Systems comply with requirements of ANSI/ASHRAE 171-2017 and AS1170.4 for earthquake actions in Australia.
- Wire and solid seismic bracing solutions available.
- Compliant with both Heavy Duty and Standard Trapeze Support Adaptors.
- Colour coded wire to distinguish the thickness and strength.

Product Code	Size	Wire Thickness	Capacity (kN)	Box Quantity

BC-32	3.2mm - 2 metre	3.2mm Blue	4.42	Each
BC-35	3.2mm - 5 metre	3.2mm Blue	4.42	Each

- Capacity includes a reduction factor.
- Capacity accounts for intended angle of use 30°, 45° and 60°.

## Seismic Wire Restraint System

How to install the Blitz Systems Seismic Restraint System

The Seismic Restraint System has been specifically designed and tested to be installed in conjunction with the Blitz Systems STUDBITE Channel to Stud Trapeze Support Adaptor. The installed system has been tested at 30°, 45° and 60° degree angles.

**Single restraint** is installed through the entire width of the STUDBITE Channel to Stud Trapeze Support Adaptor.

Feed the wire through the adaptor and secure back through the BLITZ CLIP.

Fasten the swivel bracket to the roof structure using an approved seismic fixing.

Tension the restraint by pulling the wire whilst pushing either adjustable levers on the BLITZ CLIP in the direction of the arrows stamped onto the BLITZ CLIP, until the desired tension is achieved.

### Testing Compliance

Tested in accordance with ANSI/ASHRAE Standard 171-2017 to comply with AS1170.4.

## Multi-Fix Bracket

- Removes need for trapeze builds when working alongside existing infrastructure.
- Multiple fixing options; top, side and thread clamp.
- Unique retrofit feature – hanger can fix straight to side of M10/M12 existing stud.
- Easily adjustable up and down stud.

## Multi-Fix Bracket

How to install the STUDBITE Multi-Fix Bracket

Position the STUDBITE Multi-Fix Bracket (FCS-MSH) in the desired position on the Threaded Rod so that the rod sits in the fold of the side fixing plate.

Now with the STUDBITE Retro-Fit Clamp in place, use a STUDBITE Screw to secure it.

How to install the STUDBITE Multi-Fix Bracket onto a **wall**

Place the STUDBITE Multi-Fix Bracket against the wall and mark within the holes in the side fixing plate to indicate where to drill. Remove the Bracket from the wall to drill the holes, then line up the Bracket with the holes and bolt the screw anchors directly into the wall.

How to install the STUDBITE Multi-Fix Bracket onto a **rod**

Slide a single Threaded Rod through the STUDBITE Multi-Fix Bracket hole in the top fixing plate and secure with double nut and washers.

## SINGLE LASER BEAM NEEDED

### Drilling Template

- ✓ Fast marking out of stud centres for the STUDBITE Trapeze System.
- ✓ Using a single laser beam eliminates misalignment of fixing positions.

## GENERAL DESCRIPTION

### Information

ST3 Ladder Tray System is designed for trapeze supported or surface mounted cable management and is ideally suited to small, medium and large size cables such as TPS, data comms, Mains & sub mains.

- Material galvabond 0.75mm
- 3m length
- 50mm sides
- 40mm cable laying depth
- 20mm tie-off centres

### Available Finishes

- Galvabond
- Hot dip galvanized
- Powder coated

### Technical Information

Load and Deflection data is derived from tests performed in a NATA certified testing environment in accordance to NEMA VE1-2009 STANDARDS.

ALL Ladders exceed the class designation that has been applied to the product. Load data is based on single spans resulting in worst case scenario. Deflections listed in our table are based on continuous spans. Single span installation will result in increased deflection. For single spans multiply the corresponding deflection by 2.5

**Safety Factor** 1.5 over collapse load.

### Description

STERN Duct Sealant is a grey, water-based duct sealant used in medium and high-pressure duct systems. It has a special formulation which provides permanent flexibility, excellent water resistance and superior sealing strength.

### Applications

Suitable for all types of HVAC duct systems including sheet metal duct, duct board and flexible ducts, sealing of seam, spigot and flange joints in metal fabrications.

### Preparation & Application

Ensure that surfaces are clean from chemicals, dust, dirt or oil residues. Cut tip off cartridge and apply sealant to desired location. Allow to dry for at least 2 hours if over painting is required.

### Storage & Safety

STERN Duct Sealant has an 18-month shelf life when stored between 2-30°C in a cool, dry, non-humid place. Keep contents out of reach of children. Content is non-hazardous.

Curing Time	24hr
Elongation at Break	250%
