Iroko

L'Iroko è un legno di origine africana ricavato dalle piante di Chlorophora Excelsa e Chlorophora Regia. Le sue peculiarità lo rendono funzionale e versatile per gli ambienti outdoor. La sua resistenza alle variazioni di temperatura e la stabilità, unite alla sua durezza, conferiscono a questo legno una durata davvero eccellente. Come per tutti i legni adatti all'esterno, l'esposizione in contesti outdoor e ai raggi solari tenderà nel tempo a far virare il suo colore naturale. Per questo si raccomanda un periodico trattamento di oliatura con prodotti specifici per mantenere intatte le sue proprietà, esaltarne il colore marrone dorato e la sua essenza unica di elevato pregio. Si raccomanda inoltre di evitare di appoggiare corpi o liquidi caldi sul legno e di seguire le buone pratiche di utilizzo che si usano per i prodotti indoor. Qualora il tavolo non sia utilizzato per lunghi periodi si consiglia di coprirlo per proteggerlo in ambienti asciutti e salubri.

The Iroko is a wood of African origin obtained from Chlorophora Excelsa and Chlorophora Regia plants. Its peculiarities make it functional and versatile for outdoor environments. Its resistance to temperature variations and stability, combined with its hardness, give this wood a truly excellent durability. As with all woods suitable for the outdoors, exposure to outdoor settings and sunlight will tend to change its natural colour over time. For this reason, periodic oiling with specific products is recommended to keep its properties intact, enhance its golden-brown colour and its unique high-value essence. It is advisable to avoid placing hot bodies or liquids on the wood and to follow the good handling practices used for indoor products. If the table is not to be used for long periods, we recommend covering it to protect it in a dry and healthy environment.

Il legno Iroko può avere delle variazioni di tonalità rispetto ai campioni e alle foto del catalogo e listino in base al lotto di produzione. Come tipica caratteristica del legno, il colore può variare nel tempo.

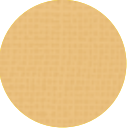

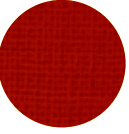

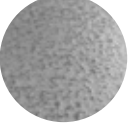

The shade of Iroko wood is only indicative and can slightly differ from the samples and pictures of the catalogue, according to the production batch. As a typical feature of wood the colour can vary during time.

La tonalità dei materiali proposti è indicativa e non va pertanto intesa in senso restrittivo, può infatti differire leggermente in conformità ai margini di tolleranza riconosciuti per i materiali impiegati.

Materiali e manutenzione	ITA	Materials and maintenance	ENG	Couleurs et maintenance	FRA	Colores y manutención	ESP
Vetro Le laccature utilizzate non presentano problemi di durata: basta evitare graffi e urti contro oggetti particolarmente duri e spigolosi. Il vetro è colorato solo sulla faccia posteriore sia nei vetri laccati coprenti mono e bicolore che nei vetri acidati laccati. La tonalità dei campioni proposti è indicativa e non va pertanto intesa in senso restrittivo; può infatti differire leggermente in conformità ai margini di tolleranza riconosciuti per i materiali impiegati. I materiali impiegati possono essere puliti tranquillamente solo con acqua oppure con un detergente neutro. Evitare l’uso di abrasivi, acidi o reagenti chimici. Il vetro è interpretato attraverso la sua trasparenza, pertanto la conformità al campione può differire a seconda della superficie e degli spessori impiegati. Un esempio lampante è dato dal vetro extrachiaro che nei campioncini si presenta completamente neutro ma che nei piani di dimensioni maggiori e con spessori più consistenti assume sfumature azzurro/verdi. Per tale ragione vi preghiamo anche di segnalare con particolare attenzione articoli che debbano essere affiancati o facenti parte di una stessa commissione.		Glass The lacquering used for our furniture is extremely durable as long as you avoid scratching it or bumping particularly hard/sharp objects against it. The glass is lacquered only on the backboth for mono or two-tones lacquered and frosted lacquered glasses. The shade of the samples is only indicative and must not be taken as restrictive. It can in fact slightly differ in compliance with the tolerances recognized for the materials used. All our materials we use can be easily cleaned with water only or with a mild detergent. Do not use abrasive products, acids or harsh chemicals. The glass is interpreted through its transparency, therefore the conformity to the sample might differ according to the surface and the thickness used. For example, the extralight glass is completely neutral in the small samples, but it takes a light blue/green shade when used on bigger or thicker tops. For this reason, we ask you to indicate carefully those articles which have to be placed side by side or are part of the same commission.		Verre Les laques utilisées ne présentent pas de problèmes de durée. Il faut seulement éviter les rayures et les chocs avec tout objet particulièrement dur ou pointu. Le verre est laqué uniquement sur sa face postérieure (dessous) avec une laque opaque soit mono ou bicolore laissant l’aspect d’un verre translucide dessus. Les tonalités des échantillons fournis sont seulement et toujours indicatives, ne peuvent et ne doivent être considérée de manière restrictive. Elles peuvent aussi différer selon les matériaux utilisée. Les matériaux utilisés peuvent être nettoyés en toute sécurité en utilisant uniquement de l’eau ou un détergeant neutre. Ne jamais utiliser de produits abrasifs ou de réactifs chimiques. Le rendu visuel du verre et de ses tonalités dépendent de sa transparence (verre normal ou extra light) et de son épaisseur. Pour exemple celui du verre qui est totalement neutre des échantillons (extra clair) il prendra une coloration bleu/vert plus ou moins foncée selon l’importance des ses dimensions et de son épaisseur. Veuillez informer vos clients de ces particularités et suivantes.		Cristal Los acabados lacados son de larga duración, es suficiente evitar arañazos y golpes con objetos muy duros y angulosos. El cristal se laca únicamente por la parte inferior, tanto en los cristales mono color y bicolor, como en los cristales en acidato lacado. La tonalidad de las muestras es indicativa, por lo tanto, podría haber variaciones debidas a los márgenes de tolerancia convenidos para los materiales empleados. Estos cristales pueden ser limpiados con agua o con un detergente neutro. Evitar la utilización de abrasivos, ácidos o reactivos químicos. El cristal está interpretado en base a su transparencia, por lo tanto, la tonalidad de la muestra puede ser diferente con respecto al producto final en función de las medidas y de los espesores empleados. Un ejemplo es el cristal extraclaro: en la muestra aparece completamente transparente mientras que, en las tapas de medidas y espesores más grandes, tiene un matiz azul/verde. Por este motivo, os pedimos que nos señalen los artículos que serán posicionados uno cerca del otro o que forman parte de la misma comisión.
