BOND AND GRIT

The bond plays a key role in a tool's performance as it determines the strength of the material that can be ground. With time the diamonds fracture or are pulled out of the bond. Simultaneously the bond wears away exposing new diamonds. Here it is important to select the right bond for the material being ground.

As a rule of thumb, the harder the material, the softer the bond should be and vice versa. When grinding very abrasive material such as rain-damaged concrete or asphalt the bond needs to be hard otherwise it will wear away too fast, causing the diamonds to fall out too soon.

The grit is the particle size of the diamond held in the bond and determines the finish. The lower the number, the larger the piece of diamond (coarser grit). The higher the number, the smaller the piece of diamond (finer grit). Generally speaking, the higher the grit, the finer the finish. First, a low grit is used for aggressive removal of coatings, then higher grits are used to remove scratches from lower grits, polish the concrete and lastly achieve a shiny surface.

Coarse grit (16/20 - 30/40)

Medium grit (50/60 - 70-80)

Fine grit (100-120 - 140/150)

CUP WHEELS

Used for a vast spectrum of applications, ranging from general concrete preparation, coating / glue removal to concrete grinding and polishing.

METAL BOND TOOLING

A wide range of metal bond and PCD shoes to fit a variety of grinding machines, providing optimal productivity.

FAST CHANGE

Streamline your tooling to one style with this alternative for most machines. The system is quick and easy to use without the need for unnecessary hardware or expensive magnets.

VRH76	76mm	\$52.90 +

OUR HERITAGE

Company owners Paul Freer and Dennis Clift formed Syntec Diamond Tools in 1994. The business soon became Australia's largest diamond tool manufacturer and a leader in developing, manufacturing, and supplying the latest designs and innovative products in the diamond tool industry. Syntec Diamond Tools has a 26,000 square metre manufacturing site and offices in South Australia, a full-service facility and office in the USA.

AUSTRALIAN MADE

By investing in a fleet of the most sophisticated machines available to manufacture diamond tooling, Syntec has simplified the process, always ensuring consistent quality and allowing for competitive pricing. From the superior raw materials used in production and strict quality control standards to the finishing and packaging of the products – no detail is overlooked in the process. We are committed to quality workmanship and creating industry-leading products that differentiate us from other diamond tool manufacturers.

OUR FOCUS

With each product, our goal is to add value and performance for our customers. Therefore, all our diamond tools are manufactured with job applications in mind. Our product designers and the technical team find out specifically what is required and can custom make products for most applications.

OUR IDEAS AND INNOVATION

Syntec Diamond Tools has been at the forefront of innovation in the diamond tool industry and continues to strive to meet challenges through ongoing investment in research, development, machinery, and product testing.
