EDITORS

Bitcoin kicked off the week with strong momentum, pushing toward the key resistance zone between \$109,588 and \$111,980. The rally likely got a boost from optimism around the US-China trade talks happening in London. According to trader Cas Abbe, Bitcoin could be gearing up for a sharp breakout above \$109K to \$110K. He pointed out that if BTC jumps 10% from current levels, it could trigger \$15.11 billion in short liquidations. On the flip side, if it drops 10%, around \$9.58 billion in long positions could be wiped out. While the overall market bias remains bullish for the long term, some analysts are bracing for a short-term correction. Swissblock is eyeing a possible dip to \$104,000, and analyst Mickybull Crypto is watching \$101,500 as a potential floor.

LETTER

Bitcoin broke above the 20-day EMA at \$105,296 on June 7, and bulls pushed through resistance at \$106,794 two days later. This recent move has shaped up into an inverted head-and-shoulders setup, and if BTC can break and hold above the neckline at around \$112,700, the breakout could ignite a strong rally toward the pattern target near \$146,892. But if bulls lose momentum and price drops back below the 20-day EMA, it'll show bears are still lurking at higher levels. That could drag BTC/USDT down to the key \$100,000 zone, where buyers are expected to make a strong stand. If that level breaks, though, the correction could deepen quickly, with \$93,000 coming into play as the next major support.

Ether has been stuck in a tight range between \$2,323 and \$2,738, showing a tug-of-war between bulls and bears. As long as ETH holds above the 20-day EMA at \$2,515, buyers have the edge and could attempt to push toward \$2,738. If they break through that ceiling, ETH/USDT might catch momentum and rip higher toward \$3,000 and potentially \$3,153. On the flip side, if the price gets rejected hard and slips below the 50-day SMA at \$2,284, that'll signal the bears are taking control. A breakdown below that level could trigger a fast drop toward \$2,111.

Lastly please check out the advancement's happening in the cryptocurrency world

Enjoy the issue

CRYPTONAIRE WEEKLY

Cryptonaire Weekly is one of the oldest and trusted sources of Crypto News, Crypto Analysis and information on blockchain technology in the industry, created for the sole purpose to support and guide our Crypto Trading academy clients and subscribers on all the tops, research, analysis and through leadership in the space.

Cryptonaire weekly, endeavours to provide weekly articles, Crypto news and project analysis covering the entire marketplace of the blockchain space. All of us have challenges when facing the crypto market for the first time even blockchain-savvy developers, investors or entrepreneurs with the ever-changing technology its hard to keep up with all the changes, opportunities and areas to be cautious of.

With the steady adoption of Bitcoin and other cryptocurrencies around the world, we wanted not only to provide all levels of crypto investors and traders a place which has truly great information, a reliable source of technical analysis, crypto news and top emerging projects in the space.

Having been publishing our weekly crypto magazine 'Cryptonaire Weekly' for since early 2017 we have had our fingertips at the cusp of this exciting market breaking through highs of 20k for 1 Bitcoin to the lows of \$3500 in early 2021. Our Platinum Crypto Academy clients (students and mentee's) are always looking for shortcuts to success to minimize expenses and possible loses. This is why we created our Crypto Magazine. Those who wish to invest their assets wisely, stay updated with the latest cryptocurrency news and are interested in blockchain technology will find our Weekly Crypto Magazine a valuable asset!

Featuring in this weeks Edition:

- Futurum Gaming
- CryptoGames
- BricklayerDAO

WEEKLY CRYPTOCURRENCY MARKET ANALYSIS

Hello, welcome to this week's 389th edition of Cryptonaire Weekly Magazine. The global crypto market cap is \$3.43 Trillion, Up 10 Billion since the last 15 days. The total crypto market trading volume over the last 24 hours is \$131.79 Billion which makes a 44.04% increase. The Fear & Greed index is 64% Greed and the Altcoin season index is 30%. The largest gainers in the industry right now are Polkadot Ecosystem and XRP Ledger Ecosystem cryptocurrencies.

Bitcoin's price has increased by 0.36% from \$109,110 last week to around \$109,500 and Ether's price has increased by 3.48% from \$2,585 last week to \$2,675 Bitcoin's market cap is \$2.18 Trillion and the altcoin market cap is \$1.25 Trillion.

Bitcoin kicked off the week with strong momentum, pushing toward the key resistance zone between \$109,588 and \$111,980. The rally likely got a boost from optimism around the US-China trade talks happening in London. According to trader Cas Abbe, Bitcoin could be gearing up for a sharp breakout above \$109K to \$110K. He pointed out that if BTC jumps 10% from current levels, it could trigger \$15.11 billion in short liquidations. On the flip side, if it drops 10%, around \$9.58 billion in long positions could be wiped out. While the overall market bias remains bullish for the long term, some analysts are bracing for a short-term correction. Swissblock is eyeing a possible dip to \$104,000, and analyst Mickybull Crypto is watching \$101,500 as a potential floor.

US crypto-related stocks moved higher in sync with Bitcoin, closing the day in the green on June 10 as more public companies added BTC to their balance sheets. The top four crypto miners and several key firms saw gains, extending even after hours. Bitcoin surged 4% on the day to trade around \$110,150, not far from its recent May 22 high of \$112,000, as market nerves calmed with the trade dialogue between the US and China underway in the UK. Robinhood (HOOD) was the outlier, dipping nearly 2% to \$73.40 after the S&P 500 index made no changes to its roster last Friday. Meanwhile, BitMine Immersion Technologies announced it had purchased 100 BTC for reserves, and energy firm KULR Technology Group disclosed a fresh \$13 million Bitcoin buy, pushing its total stash to 920 BTC.

In Paraguay, confusion broke out after a post from President Santiago Peña's personal X account claimed that the country had made Bitcoin legal tender and set up a \$5 million BTC reserve, including a wallet address for investors. Minutes later, the official account of the president's office stepped in to deny the news, urging the public to ignore any unconfirmed announcements and warning that the post

was not from an official source. The original post has since been deleted, while the government's clarification remains. The administration said it's working with the platform to get to the bottom of the incident. This comes as several Latin American nations are rumored to be exploring Bitcoin adoption, following in El Salvador's footsteps.

Meanwhile, in Australia, authorities have charged four people after uncovering a \$123 million crypto money laundering scheme that ran through a cash-in-transit security business. The Australian Federal Police froze roughly \$13.6 million in suspected criminal assets across Queensland and New South Wales. The investigation, which started in December 2023 and involved a 70-officer joint taskforce, revealed that the armored vehicle division of the company was being used to disguise illegal activity. One individual allegedly laundered \$9.5 million over 15 months, funneling dirty money through a web of front businesses including a marketing firm, a classic car dealership, and crypto exchanges. The operation mixed clean and dirty funds before sending them to beneficiaries either in crypto or via shell companies.

Percentage of Total Market Capitalization (Domnance)

CryptoGames, the Curaçao-licensed cryptocurrency gambling platform, highlights how strategic players achieve enhanced winning potential through its advanced promotional system. Professional gambling experts note that CryptoGames’ structured approach attracts serious players worldwide. The platform’s monthly **promotion schedule** provides unique opportunities for strategic participation.

Experienced CryptoGames users have identified key strategies for optimizing their promotional participation. These players analyze monthly challenge schedules to align their strongest skills accordingly. This targeted approach allows players to maximize their advantage during optimal periods.

CryptoGames’ Daily Promotions forum page serves as a strategic resource for serious players. Community members openly share successful approaches and optimal timing strategies regularly. This collaborative environment accelerates learning for players seeking consistent gaming improvements.

That’s not all—players receive generous rewards for participating in giveaways and reaching key milestones. These rewards celebrate the dedication of users who stay active and engaged on the platform. For committed users, CryptoGames also offers a prestigious VIP Membership program. This exclusive membership unlocks premium features and perks that elevate the entire gaming experience.

About CryptoGames

CryptoGames operates as a licensed cryptocurrency gambling platform offering comprehensive gaming options. The platform features Dice, Blackjack, Slots, Roulette, Video Poker, Plinko, Minesweeper, Keno, and Lottery games. Licensed by the Curaçao Gaming Control Board, the platform prioritizes player success through transparent operations and strategic gaming opportunities.

Players interested in learning strategic challenge approaches can access the Daily Promotions forum for community insights and optimal timing guidance.

ADVANCEMENTS IN THE CRYPTOCURRENCY WORLD

BITCOIN STRUGGLES AS HANG SENG CHEERS U.S.-CHINA TRADE TALKS; U.S. INFLATION EYED

Hong Kong's Hang Seng index rose above 24,000 for the first time since March, driven by trade talk optimism.

Major cryptocurrencies showed little upside momentum despite optimism in Asian stock markets due to U.S.-China trade talks.

Hong Kong's Hang Seng index rose above 24,000 for the first time since March, driven by trade talk optimism.

China's consumer and factory gate prices continued to decline, raising concerns about deflation and prompting potential stimulus measures.

The U.S. inflation data due Wednesday is expected to show tariffs-led increase in prices for core goods.

Major cryptocurrencies showed little bullish momentum Monday, even as hopes for the U.S.-China trade talks lifted Asian stocks.

Bitcoin BTC \$107,856.96, the leading cryptocurrency

by market value, traded flat-to-negative near \$105,650, having carved out a doji candle, a sign of indecision, on Sunday, according to data source TradingView.

Data from Blockchain.com showed a marked slowdown in network activity, with the seven-day moving average of daily on-chain transactions falling to 315.48K, the lowest in at least a year.

Payments-focused cryptocurrency XRP \$2.27 struggled to gather upside traction despite topping a bearish trendline from the mid-May highs. The cryptocurrency changed hands at \$2.24 at press time, down over 1% on the day (UTC). Volatility may increase this week as the XRP Ledger's APEX 2025 conference kicks off in Singapore.

Meme cryptocurrency dogecoin DOGE \$0.18654 traded nearly 2% lower, closing in on 18 cents, having failed to establish a foothold above the 100-day simple moving average (SMA) over the weekend.

US Ethereum ETFs Record 4 Consecutive Weeks Of Positive Inflows — Details

After a horrendous start to the year, the United States-based spot Ethereum ETFs (exchange-traded funds) have managed to turn their fortune around over the past few weeks. This positive trend mirrors the shift in sentiment amongst Ethereum investors since the start of the year's second quarter.

Ethereum ETFs Hit 15 Consecutive Days Of Capital Inflows
According to data from SoSoValue, the US Ethereum ETFs registered a net inflow of \$25.22 million on Friday, June 6. This latest daily performance marked the 15th straight day of capital inflows — the second-longest such streak since launch

in July 2024 — for exchange-traded funds.

BlackRock's iShare Ethereum Trust (with the ticker ETHA) accounted for the majority of the inflows on Friday, posting \$15.86 million to close the week. Grayscale's Ethereum Mini Trust (ETH) was the only other US-based Ethereum ETF fund to record any activity, with a total daily net inflow of \$9.37 million.

This \$25.22 million single-day performance brought the total net weekly inflow to a little over \$281 million in the past week, representing the fourth consecutive week of capital influx for the Ethereum-based products.

[Read more...](#)

Huge Outflow on Blackrock's IBIT Pulls Bitcoin ETFs Into Red Zone

Bitcoin exchange-traded funds (ETFs) saw a second consecutive day of net outflows, shedding \$48 million despite inflows across five funds, dragged down by a large exit from Blackrock's IBIT. Meanwhile, ether ETFs celebrated a milestone 15th straight day of net inflows.

Bitcoin ETFs Post Second Day of Outflows as Ether ETFs Mark 3 Weeks of Inflows
The bulls showed up across much of the U.S. spot bitcoin ETFs, but it was not enough to stop a Blackrock-sized exodus. Despite five bitcoin ETFs recording inflows, a \$130.49 million outflow from Blackrock's IBIT dominated the day,

resulting in a \$47.82 million net outflow overall.

Bitwise's BITB led the inflow charge with a solid \$31.81 million, while Fidelity's FBTC brought in \$22.77 million. Ark 21shares' ARKB added \$11.45 million, with Grayscale's Bitcoin Mini Trust and Van Eck's HODL chipping in \$9.24 million and \$7.38 million, respectively. But with IBIT's drag, the day's tone turned red.

Ether ETFs, however, continued to ride a

wave of investor confidence. Friday, June 6, marked the 15th straight day of net inflows, with \$25.22 million added across two major funds. Blackrock's ETHA contributed \$15.86 million, and Grayscale's Ether Mini Trust followed with \$9.37 million.

Total trading volume in ether ETFs reached \$339.49 million, with net assets holding steady at \$9.40 billion. For ether exposure, the flow remains decisively green.

For the better part of the last three decades, Japan has been the silent giant massive in capital, modest in growth, and quiet in its collapse. But right now, that collapse may no longer be quiet. In fact, it might just be the first domino in a global unravelling.

For years, Japan has kept the world lulled with zero interest rates and quantitative easing on autopilot. It was the model for managing debt through financial alchemy. But now, after decades of artificial balance, cracks are splintering fast, and they could take the rest of us with it.

The Japanese yen is in freefall. The Bank of Japan's recent interventions failed to slow it. Inflation has returned to a country famous for two decades of deflation. And beneath the surface, Japan's debt burden, now over 260 percent of GDP, is becoming a trap with no elegant exit.

The scary part? Japan is not some isolated economy. It is a core pillar of the global financial order.

Why Japan Matters More Than You Think

Japan is not just another large economy it is the world's largest creditor nation, with over 3 trillion dollars in foreign assets. That includes massive holdings in:

U.S. Treasuries (1.1 trillion dollars plus)

European bonds

Emerging market assets

The Japanese yen has experienced significant depreciation against the U.S. dollar, with the exchange rate reaching around 143 JPY per USD in June 2025. This weakening of the yen impacts import costs and can influence global currency markets.

Japan maintains its status as the world's largest creditor nation. As of December 2024, its net international investment position was approximately \$3.48 trillion, highlighting its extensive foreign asset holdings.

If the yen collapses further and Japan's institutions scramble to bring capital back home, it would create global shockwaves. The repatriation of capital means dumping foreign assets, and fast.

That could lead to:

Surging U.S. Treasury yields (bad for equities and debt financing)

Bond market volatility in Europe

Liquidity shortages in emerging markets

Countries like Indonesia, Brazil, South Korea, and Italy are acutely exposed.

A Global Credit Unwind in Real Time

Japan's economy is creaking under the weight of unpayable promises. The bond market is pinned by the Bank of Japan. But the peg is cracking. If the Bank of Japan loses control of the long end of the curve, a debt spiral could be triggered, forcing emergency liquidity programmes and more capital repatriation.

The irony? The Bank of Japan pioneered modern monetary experiments like yield curve control, and now it may become the first central bank to fail at its own invention.

That failure will not stay in Tokyo. Global pension funds, banks, and insurers are all long Japanese debt. If Japanese Government Bonds implode, global portfolios get margin-called, triggering a cross-asset sell-off. We have seen this before think 2008, but from the East.

The Dollar Dilemma

With the yen imploding, the dollar soars. But a strong dollar is its own curse:

It squeezes U.S. exporters

Increases the cost of dollar-denominated debt worldwide

Drives capital out of emerging markets

This creates a deflationary undertow that drags down global growth. It is a vicious loop: Japan weakens, the dollar strengthens, liquidity tightens, risk assets sink.

Ironically, the United States will be forced to step in with rate cuts or dollar liquidity facilities to avoid breaking things at home. A foreign crisis becomes a domestic emergency.

Is This Bullish for Crypto?

Yes and no.

Short term? Risk-off mode means everything sells, including Bitcoin. But longer term, the narrative around fiat failure and central bank fragility becomes the most bullish macro backdrop crypto could ask for.

Bitcoin does not have a central bank. Ethereum is not running negative real yields. Solana does not hold sovereign debt.

As trust in fiat systems erodes and global capital searches for hard, decentralised alternatives, crypto will become more than a trade it will become a lifeboat.

Add to that:

Japan's deflationary spiral echoing globally

Accelerated de-dollarisation

Unmoored bond markets

And suddenly, that Bitcoin thesis of "do not trust, verify" hits differently.

Final Thoughts

The collapse of Japan's model is not just a regional issue. It is a preview. A signal. A slow-motion warning that the debt-based growth engine of the past 50 years is out of fuel.

Whether it is the United States, the European Union, or China, everyone is now dealing with some version of the same problem: too much debt, too little growth, and no good way out.

Crypto will not fix everything. But it might be the only asset class that benefits from total distrust in the system.

The storm may start in Tokyo, but do not be surprised when it rains on Wall Street.

Crypto Exchange Gemini Files to Go Public Following Circle's Smash IPO

New York-based cryptocurrency exchange Gemini said Friday that it had filed the paperwork with the SEC to go public.

Crypto exchange Gemini announced that it's planning to go public.

The New York-based company said in a press release Friday that it confidentially filed a draft registration statement on Form S-1 with the U.S. Securities and Exchange Commission for a proposed initial public offering.

Gemini did not immediately respond to Decrypt's request for comment.

The exchange is run by billionaire twins Cameron and Tyler

Winklevoss. The two are famous in the crypto world because of their early bet on Bitcoin that boosted their wealth. They're also well-known for playing a role in the creation of Facebook.

Gemini's move came one day after shares for USDC issuer Circle began trading on the New York Stock Exchange, with the price of CRCL quadrupling its offering price in Friday trading.

A number of top crypto companies are hoping to follow in the footsteps of Coinbase, America's biggest crypto exchange, which went public in 2021—especially now with a crypto-friendly president in the White House.

Dubai real estate sales hit \$18B in May amid tokenization push

Dubai's property market hit \$18.2 billion in sales in May alongside growing tokenization momentum, new regulations and a record \$3 billion real estate blockchain deal.

Dubai's real estate market surged in May, posting record sales volumes and transaction values that signal growing investor confidence and potential readiness for property tokenization.

According to data shared in a press release with Cointelegraph by real estate platform Property Finder, Dubai's real estate sector reached a total sales value of 66.8 billion dirhams (about \$18.2 billion) across 18,700 transactions in May. The figures indicate a 44% year-on-year surge in transaction value and a 6% rise in sales volume.

The growth was driven by both primary and secondary market activity. Primary sales saw a 314% spike in value compared to May 2024, while secondary sales rose 21% in value.

The performance comes amid an

accelerating push into real estate tokenization, which opens up the market to more investors and reshapes the dynamics of property ownership.

Scott Thiel, the co-founder and CEO of the real-world asset (RWA) tokenization platform Tokinvest, told Cointelegraph that the record-breaking performance of Dubai's real estate market signals the city's readiness for real estate innovation like tokenization.

"It reinforces what we already knew, Dubai is becoming one of the most active and attractive real estate markets globally,"

[Read more...](#)

Crypto's obsession with memes and momentum might finally have a serious challenger. Not because fun is over, but because finance is waking up. The next big wave? It is not meme coins, it is not another L2, and it is not the flavour-of-the-month AI token. It is real-world assets tokenised, trustless, and traded 24/7 on chain.

This is where traditional finance and Web3 finally collide. And what is coming could be nothing short of a financial revolution.

From Memes to Markets

We have all ridden the waves of dog coins, hype tokens, and speculative manias. But beneath the noise, a quieter, more profound transformation is taking place. One that touches stocks, bonds, gold, real estate even commodities. The idea is simple: what if everything of value could be represented on chain?

This trend is not theoretical. It is already underway. The tokenisation of real-world assets (RWAs) is being described as a \$30 trillion opportunity by 2030. That is not just bullish it is system-changing.

Why RWAs Matter Now

In a world where inflation is persistent, trust in banks is eroding, and liquidity is fragmented, RWAs offer something different:

Programmable ownership

Transparent, immutable records

24/7 global access

Cost efficiency and automation

Imagine buying a slice of a building, a share of a music catalogue, or a tokenised gram of gold instantly, from your phone, anywhere in the world.

This is not just DeFi. This is the digitisation of everything.

The Battle for RWA Dominance

Like all emerging trends in crypto, RWAs are triggering a new kind of arms race this time among blockchains. The question is: who will become the base layer for the tokenised economy?

Chainlink vs Wormhole

Chainlink, long known for its data oracle services, is now moving heavily into tokenised assets. Its Cross-Chain Interoperability Protocol (CCIP) is a major piece of infrastructure designed to allow RWAs to move across chains. With deep enterprise relationships, Chainlink has positioned itself as the institutional bridge to on-chain assets.

Wormhole, on the other hand, represents the underdog approach more nimble, more aggressive.

With a strong presence in the Solana ecosystem and cross-chain capabilities, it is gunning for liquidity and developer adoption at speed.

The irony? You might not need to pick a side. Both could thrive just like multiple cloud providers coexist today.

Suggested Images:

1. A digital vault opening to reveal gold bars, real estate, stocks, and music notes all symbolised as tokens
2. A tug-of-war graphic between Chainlink and Wormhole, representing the infrastructure race
3. Infographic-style visual showing the \$30 trillion RWA opportunity by 2030

Real Projects, Real Impact

This is not just slide decks and speculation. Real projects are already building in this space:

Franklin Templeton is issuing tokenised money market funds

BlackRock is exploring on-chain treasury access

Lofty allows users to buy tokenised real estate in seconds

Anote Music lets you earn from streaming royalties
MelGold offers gold, silver, and platinum as redeemable tokens

OPEN is revolutionising event ticketing with over 5 million tickets already minted on chain and a roadmap to 20 million per year. Their DeFi collateral model for ticket financing is one of the most innovative RWA integrations seen to date

BricklayerDAO is opening institutional-grade real estate to retail investors through a dual-token structure. BRCK represents asset ownership while MRTR fuels ecosystem utility, enabling fractional ownership in previously unreachable markets

YakDAO is blending DeFi with glamping properties. Their Brevard resort is already live, generating real yield for token holders. This marks an evolution in lifestyle real estate, democratised through on-chain participation

These are not just experiments. They are early signals of adoption.

Stock Market Tokenisation: The Next Frontier

Tokenised real-world assets are not stopping at commodities and property. The next chapter is even bigger: tokenised equities. Major players like BlackRock and Fidelity are actively exploring the infrastructure to bring stocks on chain enabling programmable dividends, 24/7 trading, and fractional access to public markets.

Imagine buying Tesla or Apple shares directly on a blockchain, without broker fees, settlement delays, or middlemen. That is the future RWA tokenisation is building, and it will fundamentally redefine global capital markets.

Why This Could Be Crypto's Biggest Use Case Yet

Crypto has promised to revolutionise finance for over a decade. But until now, the world's real assets homes, bonds, factories were left out of that transformation. That changes with tokenisation.

This is about:

Bringing trustless rails to a trust-heavy industry

Enabling global capital access for anyone

Turning illiquid, high-barrier assets into tradable, fractional units

And it is just getting started.

Final Thoughts: The New Financial Frontier

We are witnessing the emergence of a parallel financial system. One where assets live on chain, trade without borders, and offer investors more transparency and control than ever before.

The meme era will not die. There will always be hype cycles and short-term manias. But alongside them, the serious infrastructure of the future is being built quietly, steadily, and soon, massively.

RWAs are not just a narrative. They are the foundation of a new financial age. And if you are reading this now, you are still early.

Remember: do not just buy the tokens understand the thesis. Because in the next cycle, the biggest winners might not bark or moon. They might just quietly tokenise the world. surprised when it rains on Wall Street.

Uber CEO Says Stablecoins ‘Super Interesting’ Play for Transportation Giant As Circle Debuts on US Stock Market

Uber CEO Dara Khosrowshahi says that the ride-sharing and delivery company is eyeing stablecoins as a tool for business.

In an interview during the Bloomberg Tech Summit in San Francisco, Khosrowshahi says that Uber is looking at the use cases for stablecoins – cryptocurrencies whose value is pegged to other assets such as the US dollar.

“We’re still in the study phase, but I think stablecoin is one of the, for me, more interesting instantiations of crypto that has a practical benefit other than crypto as a store of value. Obviously, you can have your opinions on

Bitcoin, but it’s a proven commodity, and people have different opinions on where it’s going.”

One stablecoin use case that Khosrowshahi believes could benefit Uber and other companies is its potential to reduce the costs associated with transferring money internationally.

“I do think that stablecoin is quite promising, especially for global companies that are moving money around globally to create a mechanism for us to essentially reduce costs in terms of moving money internationally. So that’s super interesting to us. And we’re definitely going to take a look.”

Bigger than Coca-Cola? If Tether went public, it could reach a \$515B valuation

With a valuation of \$515 billion, a Tether IPO would outpace Coca-Cola and Costco, making it the 19th most valuable company in the world.

A recent analysis posted by Artemis CEO Jon Ma has sparked discussion about Tether’s potential market value, suggesting that if the company were to go public, its valuation could reach \$515 billion. This figure would place Tether among the world’s largest corporations by market capitalization, ahead of well-known names such as Costco and Coca-Cola.

Jon Ma’s analysis draws several key comparisons and assumptions to arrive at this valuation. USDC issuer Circle recently went public with a market cap of \$30 billion. Ma’s financial model projects Circle to reach \$410

billion in EBITDA for 2025, which equates to a 69.3x EBITDA multiple.

Tether reported \$13 billion in net profits for 2024, with \$7 billion coming from Treasuries and repos and \$5 billion from unrealized gains on Bitcoin and gold holdings, the latter of which were not included in EBITDA calculations, causing Tether CEO Paolo Ardoio to call the valuation:

“A bit bearish considering our current (and increasing) Bitcoin + Gold treasury.”

He did, however, acknowledge that \$515 billion is a “beautiful number,” and that he was “humbled” by the valuation. Comments from Bitcoin advocates and entrepreneurs Jack Mallers and Anthony Pompliano suggested the valuation should be at least \$1 trillion.

The crypto gambling industry has exploded, **reaching** \$81.4 billion in revenue during 2024. This represents a remarkable fivefold increase since 2022. Such explosive growth makes proper licensing absolutely essential for protecting players worldwide. Unlicensed platforms often lack transparency and face serious legal and reputational issues. Licensed operators gain trust, attract more users, and build sustainable businesses successfully.

How Licensing Ties Into Fairness and Transparency?

Third-Party Auditing Requirements

Licensed casinos must undergo regular independent audits to verify game fairness consistently. These comprehensive evaluations test Random Number Generator software to ensure completely unbiased outcomes. Reputable agencies like eCOGRA certify games on many licensed platforms worldwide today. The auditing process creates accountability and builds player confidence in gaming outcomes.

Provably Fair Technology Implementation

Over 70% of top licensed crypto casinos now offer provably fair algorithms today. These systems allow players to verify dice, blackjack, and roulette outcomes independently. Players can check cryptographic hashes to confirm no manipulation

occurred during gameplay. This transparency level sets licensed platforms apart from unregulated competitors significantly.

Financial Security and Anti-Fraud Measures

Licensing mandates strict Know Your Customer and Anti-Money Laundering policy compliance. These requirements ensure players are legitimate and prevent criminal activity effectively. Licensed operators must verify player identities and monitor suspicious transaction patterns. This protects both the platform and its users from fraudulent activities.

Responsible Gaming Tool Requirements

Licensed casinos must provide self-exclusion options, deposit limits, and cooling-off periods. These tools help players maintain control over their gambling habits responsibly. Regulators require clear access to support resources for problem gambling assistance. Licensed platforms invest in player welfare beyond basic gaming entertainment.

Transparent Financial Operations

Licensed operators must maintain segregated player funds separate from operational accounts. This ensures player deposits remain protected even during financial difficulties potentially. Regular financial audits verify proper fund management and operational stability consistently. Players gain confidence knowing their money is handled with professional standards.

Is CryptoGames Legally Licensed for Online Gambling?

CryptoGames operates under full legal authorization through its parent company, MuchGaming B.V. The company maintains its headquarters at Korporaalweg 10, Willemstad, in Curaçao currently. This strategic location provides access to one of gaming's most respected jurisdictions.

The Curaçao Gaming Control Board has granted MuchGaming B.V. official operating license number OGL/2024/1336/1047. This license ensures CryptoGames meets all regulatory requirements for fair gaming operations. The GCB maintains strict standards for financial security, player protection, and operational transparency. Players can verify this licensing information directly through the official regulatory website easily.

Comparing CryptoGames vs. Unlicensed Crypto Casinos

CryptoGames' Curaçao license ensures all games use certified provably fair technology systems. Players can independently verify every dice roll, card deal, and slot spin. The platform maintains transparent payout rates and publishes game statistics regularly. Unlicensed competitors often hide their algorithms and refuse independent verification requests.

CryptoGames follows strict financial protocols, maintaining player funds in segregated cold wallets. The platform processes withdrawals within 24 hours and provides multiple cryptocurrency options. Licensed operations like CryptoGames must demonstrate financial stability to regulatory authorities. Unlicensed sites frequently experience payment delays, frozen accounts, and unexplained fund seizures.

Player support at CryptoGames operates under regulatory standards with escalation procedures available. The platform provides responsible gaming tools including deposit limits and self-exclusion options. Licensed operators must respond to complaints within specified timeframes or face penalties. Unlicensed casinos often ignore player issues entirely or provide inadequate support.

The Role of Audits and RNG Certification in CryptoGames

CryptoGames employs advanced provably fair Random Number Generator technology for complete transparency. Every player can independently verify their bet results using cryptographic hash verification. The system combines server seeds with client seeds to generate unpredictable outcomes. Players receive the server seed hash before betting, preventing any manipulation possibilities.

iTech Labs conducted comprehensive RNG auditing for CryptoGames. The independent testing laboratory certified that CryptoGames' RNG passed Marsaglia's diehard statistical tests. The audit confirmed that all card and number sequences remain unpredictable and uniformly distributed. This certification demonstrates CryptoGames' commitment to maintaining the highest fairness standards possible.

CryptoGames maintains active membership in the Crypto Gambling Foundation as a verified operator. The CGF promotes improved provably fair gambling methods across the entire industry. The foundation educates players about verification processes and raises awareness about fairness. This partnership reinforces CryptoGames' dedication to transparent gaming practices and player education.

CryptoGames' Commitment to Staying Above Board

CryptoGames prioritizes responsible gambling through comprehensive player protection measures and educational resources. The platform implements strict age verification to prevent underage gambling completely. Time-out options allow players to suspend their accounts for one to thirty days. Self-exclusion features provide longer breaks ranging from six months to five years.

The platform actively monitors player behavior patterns to identify potential gambling problems. Customer service can implement protective measures when concerning behavior patterns are detected. CryptoGames provides direct links to professional gambling support organizations like GamCare. Players receive clear guidelines about setting limits and maintaining control over spending.

CryptoGames operates under the principle that gambling should remain entertainment, not financial necessity. The platform encourages players to never gamble with money they cannot afford.

What Players Gain From a Regulated Platform like CryptoGames

Competitive House Edges and Transparent Odds:

CryptoGames maintains industry-leading low house edges across all games for maximum value. The platform publishes detailed payout percentages and RTP rates for complete transparency. Players benefit from better winning chances compared to unlicensed sites with inflated edges. Licensed operators must maintain fair odds standards to preserve their regulatory standing.

Exclusive VIP Programs and Loyalty Rewards:

Regulated platforms like CryptoGames offer structured VIP tiers with escalating benefits. High-volume players receive cashback bonuses, exclusive tournament access, and personalized account management. VIP members enjoy faster withdrawal processing and higher betting limits consistently. These premium perks reward player loyalty while maintaining regulatory compliance standards.

Regular Bonus Promotions and Community Giveaways:

CryptoGames hosts frequent promotional events including free spins and deposit bonuses. The platform organizes community contests with

cryptocurrency prizes and special tournaments. Licensed operators can afford generous promotions due to sustainable business models. These events create engaging experiences while providing additional value to players.

Active Community Forums and Social Features:

The platform maintains transparent community forums where players discuss strategies openly. Members share experiences, verify wins, and participate in collaborative gameplay discussions. CryptoGames encourages healthy competition through leaderboards and achievement systems regularly. This social aspect builds trust and creates lasting player engagement.

Takeaway

CryptoGames represents the gold standard for licensed cryptocurrency gambling with proven fairness systems. The platform combines entertainment value with regulatory protection that unlicensed competitors cannot match. Players gain access to verified games, secure transactions, and professional support services. Choosing licensed operators like CryptoGames ensures a safer and more enjoyable experience.

XRP Ledger Chosen By Dubai To Power Real Estate Tokenization

Dubai's Land Department (DLD) has switched on the Middle East's first government-backed tokenization of property title deeds, selecting the open-source XRP Ledger (XRPL) as the settlement layer for a pilot expected to reshape how domestic real-estate assets are bought, sold and financed. The live launch, developed under the DLD's Real Estate Evolution Space Initiative (REES) and executed with tokenization specialist Ctrl Alt, synchronizes on-chain deed tokens with Dubai's conventional land registry, creating a legally compliant bridge between the XRP Ledger and the emirate's long-standing property system.

Dubai Turns To XRP Ledger
Ripple's developer arm welcomed the choice. In a post on X, RippleX called the programme "a massive milestone for Dubai's real estate market," adding that the XRPL was picked "thanks to its decade-long reliability and stability in tokenizing and exchanging digital and real-world assets."

Ctrl Alt's infrastructure mints fractional title tokens, each representing a direct economic interest in a registered property. The company has integrated its stack directly with DLD databases so that any on-chain transfer instantly updates the government ledger, preserving legal finality while dispensing with paper conveyancing.

Stablecoin Fever With Circle Soaring Another 40%: Apple, X Among Those Reportedly Wanting In

According to Fortune, the tech giants are in early talks with crypto firms to add stablecoin payments to reduce fees.

Apple, Airbnb, and X are in early discussions with crypto firms about using stablecoins.

The news comes amid yesterday's euphoric

IPO for stablecoin issuer Circle, whose shares are higher by another 40% on Friday.

Stablecoin payments topped \$27.6 trillion in 2024, surpassing Visa and Mastercard volumes.

Apple, Airbnb, Google and Elon Musk's X are holding early discus-

sions with crypto companies about integrating stablecoins into their payment systems, according to people familiar with the matter who spoke with Fortune.

The tech giants see stablecoins as a way to cut transaction costs and streamline international payments. Stablecoins are digital tokens pegged to fiat currencies like the U.S. dollar, offering a bridge

between crypto infrastructure and traditional finance. In 2024, they facilitated more than \$27.6 trillion in transactions — more than Visa and Mastercard combined — according to a report from the World Economic Forum.

Stablecoins have been a fast-growing area of interest for traditional finance and that appears to be exploding even further.

Bitcoin community is divided over Core devs' statement on transaction relay

Bitcoin Core developers have defended their decision to scrap the data limit for transaction relays, but many claim it will enable more spam.

A debate has erupted among the Bitcoin community over a joint statement released by 31 Bitcoin Core developers on June 6.

In their statement, the developers argued that while the new transaction relay policy might lead to more non-financial use cases,

protecting censorship resistance is one of the core tenets of the blockchain.

The developers noted that the Bitcoin network is "defined by its users, who have ultimate freedom" to choose whether they utilize the blockchain for financial or non-financial use cases. As such, the Bitcoin core developers are "not in a position to mandate" what software or policies they choose.

Several Bitcoiners have

opposed the developers' opinion, calling it a drift away from the blockchain's original intended function. On the other hand, some have defended the developers' viewpoint, leading to a global debate among Bitcoiners.

The Bitcoin transaction relay policy is at the core of the debate. Transaction relay is a 'core tenet' of a Bitcoin node. Nodes relay block transactions and validations to other nodes to ensure that the blockchain remains updated across all nodes.

Coinbase says it's tackling frozen accounts in 'major issue'

Improvements in Coinbase's machine learning models and infrastructure helped to cut the number of unnecessary account restrictions.

Coinbase CEO Brian Armstrong said the crypto exchange has reduced unnecessary user account freezing by 82%, after identifying it as a "major issue."

In a June 6 X post, Armstrong acknowledged that account freezing has been a problem "for longer than is acceptable," and that it has become a top priority for his firm to improve.

"The issue has been reduced by 82% so far, with more improvements coming. We'll

keep you updated as further improvements roll out," Armstrong said, before asking all customers with frozen accounts to contact Coinbase Support.

Coinbase users have expressed frustration over account restrictions for years, reporting sudden freezes lasting several months or longer, prompting some to abandon the platform.

Customer confidence in Coinbase was also recently shaken by a mass data breach that exposed the details of more than 70,000 customer accounts.

Coinbase says fewer restrictions due to improved models

Crypto Betting Platform Polymarket Becomes 'Official Prediction Market Partner' for Elon Musk's X

The crypto betting firm Polymarket is partnering with Elon Musk's X.

Polymarket is now X's "official Prediction Market Partner" and will kick off the partnership by co-launching a product with the social media platform designed to give gamblers data-driven insights and recommendations, per a new press release.

Polymarket chief executive Shayne Coplan says the partnership will provide both platforms' users with better ways to "make instant sense of breaking news and make informed decisions about the future."

"Combining Polymarket's accurate, unbiased, and real-

time prediction market probabilities with Grok's analysis and X's real-time insights will enable us to provide contextualized, data-driven insights to millions of Polymarket users around the world instantaneously. We are proud to work with X as the official prediction market partner and to continue our fruitful collaboration, developing an innovative suite of product integrations."

Grok is X's integrated artificial intelligence (AI) chatbot.

In November, the Federal Bureau of Investigation (FBI) raided Coplan's home amid allegations that Polymarket violated a settlement agreement with the Commodity

How Ethereum Is Faring Since Its Major Pectra Upgrade

Not only has ETH's price surged, but Ethereum's Pectra upgrade has made a sizable impact on the network ecosystem. Here's how.

After Ethereum's Pectra upgrade, blob transaction costs dropped from ~\$16,000 daily to a fraction of a penny, making layer-2 networks significantly cheaper to operate.

Despite blob usage increasing 33%, rollups haven't fully utilized the expanded capacity. The increased data burden from cheaper blobs is forcing smaller validators to merge with larger operations, however.

A month after the Pectra upgrade, key indicators on Ethereum have begun to reveal the promise and pitfalls of the network's most ambitious technical overhaul since the 2022 "merge."

One of the major features that the Pectra upgrade brought was expanding the Ethereum blockchain's capacity for handling "blobs," which are units of "ephemeral data storage," helping keep larger amounts of it on the consensus layer, according to a definition from the Protocol developer team.

A blob is a dedicated data structure that can store larger amounts of data. More blobs means transactions, layer-2 networks, and rollup operations could get even cheaper.

"The near-zero cost of blobs has been a major unlock for Ethereum scalability," Ulyana Skladchikova, head of product at open-source multi-chain explorer Blockscout, told Decrypt.

Switzerland Opens Crypto Tax Vault To 74 Nations—Details

Switzerland's government has given the green light to a plan that will force crypto firms to hand over data on their customers' digital assets. The measure, adopted on June 6, 2025, aims to start sharing information with 74 partner countries. It is set to take effect on January 1, 2026, but the first actual exchange of data won't happen until 2027.

According to the Swiss Federal Council, the bill was put forward to update existing rules on international data sharing. Starting January 1, 2026, crypto-service providers in Switzerland must record who holds which crypto assets and report that data to Swiss tax authorities.

Then, in 2027, those authorities will send the information to partner

states that meet the required standards. Parliament is debating the bill now, and approval will lock in the January 2026 start date.

Based on reports, Switzerland plans to share crypto data with 74 jurisdictions. That group covers all 27 member states of the European Union plus the United Kingdom. It also includes most G20 countries.

However, the United States, Saudi Arabia and China are not on the list because they haven't agreed to the Crypto-Asset Reporting Framework (CARF) rules. Data will only flow to countries that both request it and meet OECD criteria under CARF.

President Milei Gets Absolved: No Infringement Found in Libra's Promotion

The Anti-Corruption Office (AO) found that President Javier Milei did not violate any ethics laws with his involvement in the promotion of Libra, a meme coin launched in February.

Investigation Finds President Milei Did Not Break Ethics Laws by Promoting Libra

One of the first investigations into Argentina's President Javier Milei's involvement in the Libra incident has been concluded. The probe, ordered by Milei's administration a week after the launch and the subsequent price debacle of the token happened, found that the Argentine leader did not break the "Ethics in the Exercise of the Public Office" law after promoting the launch of Libra using his social media account.

Explaining the reasoning behind this decision, the Anti-Corruption

Office states that, given Milei used his personal account to share info about Libra's launch, it considers Milei acted as a private citizen without leveraging his position as Argentine President.

In this regard, the document assessed that personal accounts on social media "cannot be considered channels for disseminating information or official decisions of the State simply because they are used by public servants."

The probe also absolved Sergio Morales, former advisor to the board of directors of the National Securities Commission, of any wrongdoing regarding his involvement in any crypto-related dealings.

In addition, the office found no links between President Milei and the parties behind Libra's launch, including Kelsier Ventures, Hayden Davis, Mauricio Novelli, and Manuel Terrones Godoy.
