ABOUT US

Green Heaven Organics is a dedicated manufacturer and supplier of premium organic agricultural inputs, committed to promoting sustainable and eco-friendly farming practices. We specialize in the production of high-quality Vermicompost, Cow Dung Manure, and Chicken Manure, helping farmers improve soil fertility, enhance crop productivity, and reduce dependence on chemical fertilizers.

Our products are produced using carefully selected natural raw materials and processed under strict quality standards to ensure maximum nutrient content and soil enrichment benefits. We believe in supporting a greener future by providing organic solutions that improve soil health, increase water retention, and contribute to long-term agricultural sustainability.

With a focus on quality, consistency, and customer satisfaction, Green Heaven Organics serves farmers, nurseries, landscapers, organic farming projects, and agricultural distributors across India and international markets.

Green Heaven Organics was established by Mahendra Sinh Rajput, who embarked on this entrepreneurial journey with a passion for sustainable agriculture and environmental conservation. With over 5 years of experience, our company began by producing high-quality vermicompost. Over the years, we have expanded our expertise and offerings to include a diverse range of manures and biofertilizers.

Our commitment to nurturing the earth has led us to produce a variety of products that enrich the soil and support eco-friendly farming practices. We are dedicated to providing farmers with natural and sustainable agricultural solutions that enhance productivity while protecting the environment.

OUR PRODUCTS

VERMICOMPOST

Premium Vermicompost is a 100% organic and chemical-free fertilizer produced using *Eisenia fetida* earthworms. It is rich in essential nutrients including Nitrogen, Phosphorus, Potassium, and beneficial micronutrients that promote healthy plant growth and improve soil fertility. Currently, our facility produces 1000 tonnes of vermicompost annually, with the capacity to expand production to 2500 tonnes per year. We offer convenient packaging options to suit the needs of our customers, including 5 kg, 40 kg, and 50 kg bags.

OUR PRODUCTS

COW DUNG MANURE

Cow Dung Manure is rich in essential nutrients, including Nitrogen, Phosphorus, Potassium, and micronutrients, which are crucial for healthy plant development. It improves soil structure by increasing its organic matter content, enhancing water retention, and promoting beneficial microbial activity. This leads to improved soil fertility and long-term sustainability of agricultural land. One of the key benefits of Cow Dung Manure is its ability to slowly release nutrients, providing a consistent nutrient supply to plants over time. This gradual release helps prevent nutrient runoff and reduces the need for frequent fertilization. At Green Heaven Organics, we produce 700 tonnes of Cow Dung Manure annually. Our Cow Dung Manure is carefully processed to ensure it is free from pathogens and ready for use in a variety of agricultural and gardening applications.

OUR PRODUCTS

EARTHWORMS (EISENIA FETIDA)

Eisenia Fetida, commonly known as Red Wigglers or composting worms, are the most efficient earthworms for vermicomposting. These earthworms are specially bred for their ability to convert organic waste into nutrient-rich vermicompost quickly and efficiently. They are ideal for organic farming, waste management, and sustainable agriculture practices. Our Eisenia Fetida earthworms are carefully cultivated in controlled conditions to ensure healthy, active, and disease-free worms. They have a high reproduction rate, making them perfect for farmers, gardeners, nurseries, and waste management companies looking to start or expand their vermicomposting operations. These earthworms improve soil aeration, enhance nutrient availability, and support sustainable agricultural practices.

OUR PRODUCTS

CHICKEN MANURE

Chicken Manure is a nutrient-rich organic fertilizer that is highly effective for enhancing soil fertility and promoting plant growth. It is a natural byproduct of poultry farming and is packed with essential nutrients, particularly Nitrogen, Phosphorus, and Potassium, which are vital for plant development. Chicken Manure is known for its ability to improve soil structure, increase microbial activity, and boost nutrient availability. Its high nitrogen content makes it an excellent choice for accelerating plant growth and improving yield quality. Unlike synthetic fertilizers, Chicken Manure releases nutrients slowly, providing a steady supply to plants and reducing the risk of nutrient leaching into waterways. At Green Heaven Organics, we produce 100 tonnes of Chicken Manure annually, with the capacity to expand production to 500 tonnes per year. Our Chicken Manure is carefully processed to ensure it is safe and easy to apply, making it suitable for a wide range of agricultural applications.
