## Bowing and Cupping MDF, Particle Board and Plywood

*Please Note - We cannot guarantee perfect flatness of panels with the bonding of Laminate/Linoleum to one or both faces of any substrate material or any thickness material. Tolerance must be allowed for due to variances in moisture content of the board, external temperatures, changes in temperature and relative humidity in storage and fabrication areas at building sites and factories, storage techniques (acclimatization is required), transportation and installation variables. These external pressures may cause boards to bow and twist irreversibly.*
