1,700 Tons • 108M Length Transportation by Megalift

Megalift successfully handled the transportation of the Kota Tinggi New Bridge, a massive structure weighing 1,700 tons, using 168-axle multi-axle Goldhofer trailers and 4 SPT power packs.

This highly complex operation required careful load distribution, synchronized multi-axle steering, and meticulous route planning – including safely crossing a standard highway bridge – with precise timing and coordination, as authorities permitted only one day of road closure for the transport. Our experienced team also managed structural support, hydraulic lifting, and stability monitoring throughout the journey, showcasing Megalift's expertise in executing large-scale infrastructure projects safely and efficiently.

A big thank you to everyone involved for their dedication and professionalism. This achievement underscores Megalift's commitment to engineering excellence and innovative heavy-lift and heavy-transport solutions.
