AI FOR ARBITRATION: TURNING DOCUMENT CHAOS INTO CASE CLARITY WITH HEVI

Join the Association for the 6th artificial intelligence (AI) webinar in a series in our ongoing mission to provide regular upskilling opportunities for everyone interested in alternative dispute resolution (ADR).

Modern arbitrations on complex construction and mining matters are won or lost in the documents, not the speeches. This session shows a practical, defensible workflow for using AI to accelerate evidence review, build chronologies, map issues to sources, and pressure test submissions across thousands of records, while keeping data private and controlled. We will walk through a simple end to end “case build” flow, including evidence triage, timeline building, issue and allegation mapping, witness and expert preparation, and hearing support searches, with an emphasis on process integrity and human verification

Date: 26 February 2026

Time: 18:00 to 19:00 (SAST),
16:00 to 17:00 (BWT)
