TOLHUIJS

DUTCH DESIGN WITH A STORY

Tolhuijs Design

Tolhuijs designs through the upside-down world. We do not create a design and then add the materials like most designers do. What we have at hand is our starting point. We design based on the material and production options, resulting in a product that is interesting for the customer. Tolhuijs' style is characterized as 'simple, tough and honest'. The materials are visible, apart from painting nothing is covered up.

At Tolhuijs, designs have a double meaning. Our SPOOL is not just another lamp on the market, our FENCY is not just a steel grid. Before products are placed in our range, they have had a completely different purpose and were ready for scrap. We ensure that these materials can have a longer and better life.

SOCIALLY RESPONSIBLE ENTREPRENEURSHIP

We believe in social design; a fair supply chain that supports society. We aim to produce all our products locally and we try to help people who are at a disadvantage in the labour market. Therefore, we choose to have our products made by prison inmates and in social workshops. Besides manufacturing our products, the workers can also improve their skills by obtaining various certifications.

UPCYCLING

Normally failed designs end up in the rubbish bin, but that is exactly the place where our products begin. Every day, factories throw out high-quality waste material that could be put to new use. We use these materials as the starting point for our sustainable design products. Transforming waste materials into new products of better quality is called 'upcycling'. We believe in giving second chances, and by using these products we hope to raise awareness for the waste cycle and the quality of these materials.

DESIGN FIRST

The quality and the beauty of our designs have priority over all else. Our style is characterised by modern and playful creations that you can customise to get the perfect functionality for your space. This way you can design your own story.

FENCY

An upcycled storage system

The story of the FENCY

The FENCY is a multi-functional storage system with great design flexibility. The steel frames are waste materials of a fence factory. We got creative with these fences and played with the colours and measurements. After receiving a fresh powder coat and several pressed pallet or laser wood shelves these fences are now well equipped for a new adventure. FENCY comes in different sizes and colours and is waiting for you to be equipped with your choice of shelves, hooks, and magnets.

SPOOL

ABOUT
SPOOL

The story of the SPOOL

The product's name, "SPOOL", derives from the copper-coloured spool that is the heart of our lamp. That spool was once part of a welding machine. An electrode wire, wound around the spool, was used in the welding process. Once the wire is finished the spool is quite useless for the welder, and hundreds of spools find themselves out on the streets. Luckily, that is when we come in to save the spools and we transform them into industrial-looking lamps for your home. The SPOOL is produced in social workplaces and by prison inmates.

By using a SKIN you can dress up your SPOOL and give it a different colour. The industrial feel and tough look make this lamp a perfect addition to your interior. They feel right at home above a kitchen table, a desk, or a dining table, alone or paired together.

ANDY & BENDY

The story of Andy & Bendy

This unique lamp is both environmentally and socially sustainable. The metal body of Andy & Bendy comes from a fence manufacturer's waste, whereas the wood is reused from wasted pallets. The metal beam is cut, bent and powdercoated in a Dutch prison and the lamp is then assembled at social workplaces.

HOOK'D

ABOUT
HOOK'D

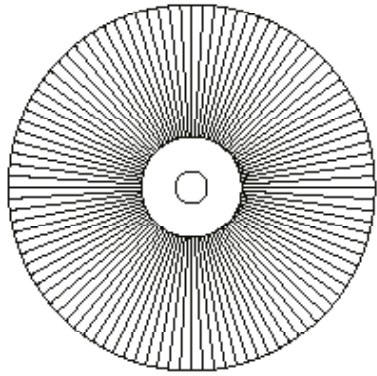

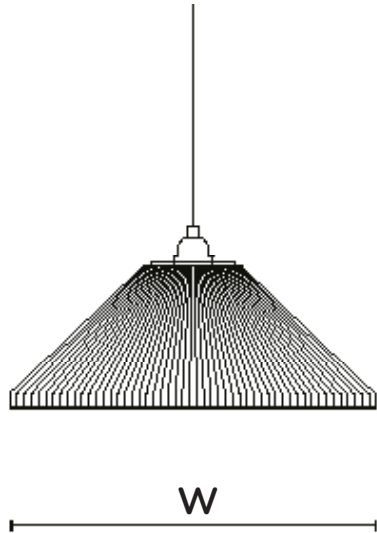

The story of HOOK'D

HOOK'd is a lamp with a long story. In short, millions of specific brackets are discarded by the industry every year, and they can unfortunately only be used once. These hooks were used in a powder coating facility, such as at our partner Bruynzeel Storage Systems. The originally copper and brass hooks get their typical gradient due to the color currently used in the coating facility and the automatic powder coating robot. The HOOK'D is therefore available in black and white. Tolhuijs Design collects these brackets and has lamps assembled from them in a social workshop.

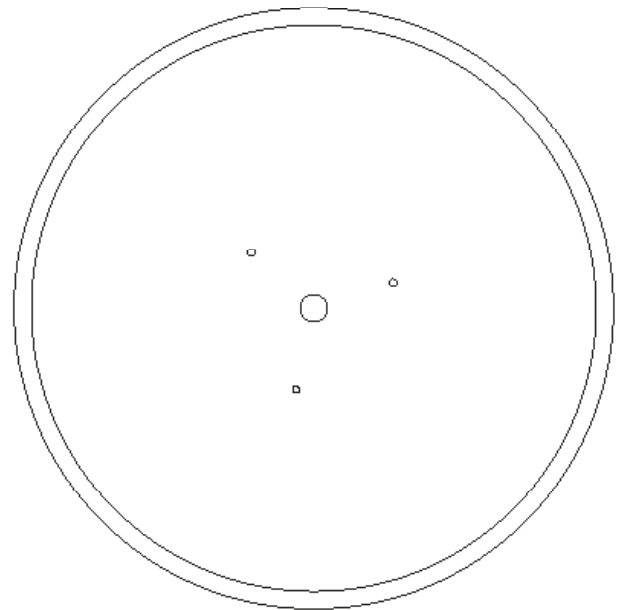

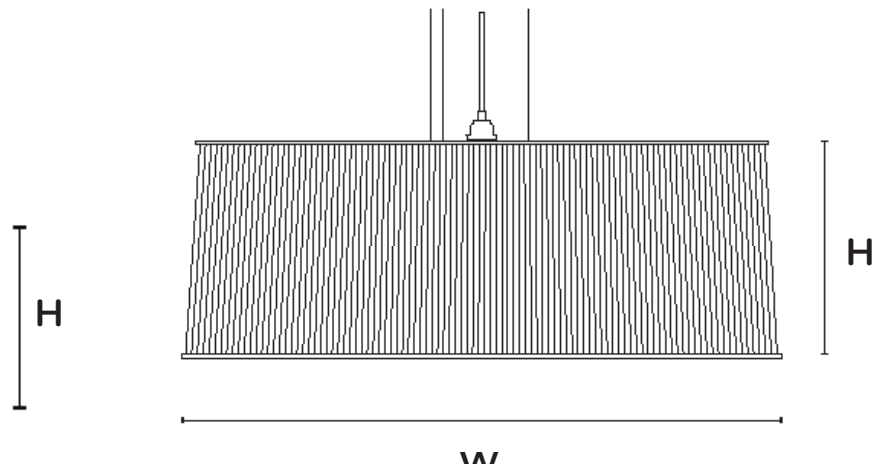

HOOK'D - Lamps

WHITE GRADIENT

BLACK GRADIENT

The gradient of the hooks comes from their previous purpose in a powdercoating facility. An automatic robot powder coats these copper and brass hooks into black and white, making the HOOK'D available in those colors.

SPHERE

The story of SPHERE

This unique lamp consists of 3 metal welding reels pushed together, a residual product (seen by many as waste) that is used in the metal industry. A perfect sphere is created by the three round parts, and the shape of the welding reels gives the lamp a distinctive outline when viewed from different angles. The tubular LED lamp as an axis gives form atmosphere.

ABLE

The story of ABLE

This sustainable table uses waste material from a steel factory from which we create cross and trapezoid legs welded and coated in a Dutch prison. The top of this circular table is made of wood from discarded material, factory pallets or old train wagons, which is positioned into different patterns making the table a unique piece of furniture with a rich history behind it. To make it a truly durable table top, we treat it with a hard wax for protection. The ABLE is ideal as a designer table in the home, but also a wonderful option for a sustainable office design.

Wood textures

Normal pallet wood

Size: 240cm x 90cm

Can be ordered in a custom size.

ABLENP00

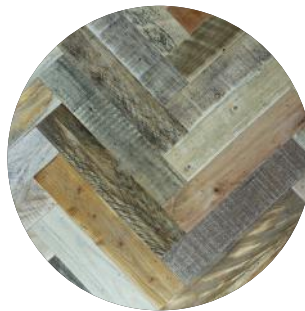

This table is made of discarded pallets. Each plank is sawed & sanded to create a high quality 5cm thick table top.

Herringbone pallet wood

Size: 240cm x 90cm

Can be ordered in a custom size.

ABLEHB03

The herringbone table is made the same way as the normal pallet wood table only then carefully positioned in a herringbone pattern.

Pressed pallet wood

Size: 240cm x 90cm

Can be ordered in a custom size.

ABLEPP06

Every pallet is checked for nails, planed to an equal thickness and glued together to create a unique table.

Oak train parts

Size: 240cm x 90cm

Can be ordered in a custom size.

ABLETW00

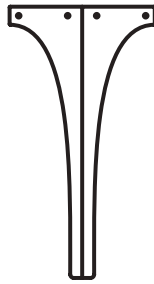

This oak wood comes from demolished old train wagons. The rough and industrial history is still visible in the table top.

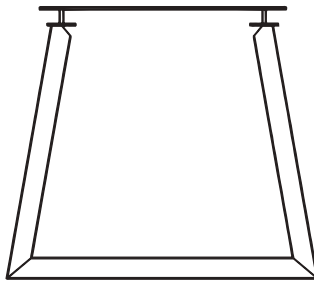

Table legs

The metal legs are made of waste metal from a steel manufacturer. In Dutch prisons the legs are welded, and coated to give the colour you like. Each table leg can be ordered on any type of table top.

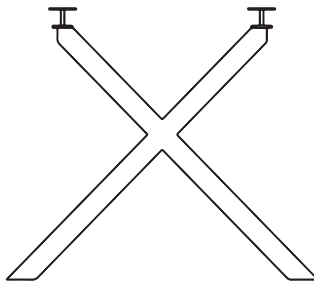

Laser legs

Trapezoid legs

Cross legs
