Meet TandemVu

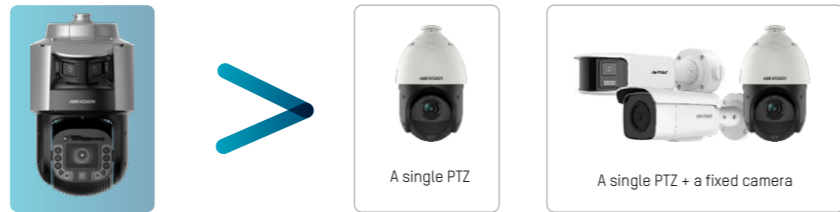

The TandemVu PTZ cameras feature Hikvision's next-generation camera design, integrating multiple lenses in one security camera to provide big picture and small details in tandem.

Equipped with this technology, Hikvision's new TandemVu PTZ cameras display a broad view even when panning, tilting, or zooming. Users will see everything and miss nothing at any given moment, getting situational awareness from the moment they set up the camera.

Advantages of Hikvision TandemVu PTZs

One Instead of Many

A single camera provides benefits equivalent to multiple cameras, allowing for one-time installation and saving on costs by using only one IP address.

Solving problems that conventional PTZs may lose the original scene when pan and tilt or lose the global view when zoom

Reduced TCO (devices, cables, labor cost, etc.)

One-time installation

One-IP management

Big Picture and Details, in One View

Multi-lens synergy delivers panoramas over expansive sites and detailed, zoomed-in views at the same time.

Super wide view The panoramic channel supports 180° ultra-wide view

Smart linkage Automatic object detection via the panoramic channel with instant object tracking via the PTZ channel (available on select models, please check the specification sheet)

Manually select an object and the PTZ lens will track it. This mode has the highest priority.

When an object enters the view of the static lens, the PTZ lens is automatically triggered to track it.

Even if the object has left the monitoring area of the static lens, the PTZ lens will continue to track it.

Superb Low-Light Performance

Illuminate the darkness with ColorVu and DarkFighter technologies, and keep your assets safe with the TandemVu PTZ.

ColorVu Provides color images overnight with a fixed, F1.0 lens that lets in as much light as possible

DarkFighter Pan, tilt, and zoom for vivid details even in low light

ColorVu Technology

Switchable-Intelligence in One Camera

Enjoy a variety of powerful, intelligent functions in one camera – just switch to the function you need!

- Perimeter protection (Smart events, applied to all TandemVu PTZs)
- Person and vehicle detection*
- Auto Tracking 3.0*
- ANPR & traffic violation detection*
- AR Live Interaction with HikCentral Professional*

AR Live Interaction strengthens the complete perception of panoramas and details in open spaces through a live video map. It augments the user's monitoring experience with location-based label management and video channel linkage for intelligent object tracking.

*These functions are available only on select camera models. For details, please check the camera model specification sheet.
